Figure S1. Multiple sequence alignment of bHLH transcription factors. The red shades refer to conserved amino acid sequence found in the typical bHLH domains. Underline indicates bHLH domain.

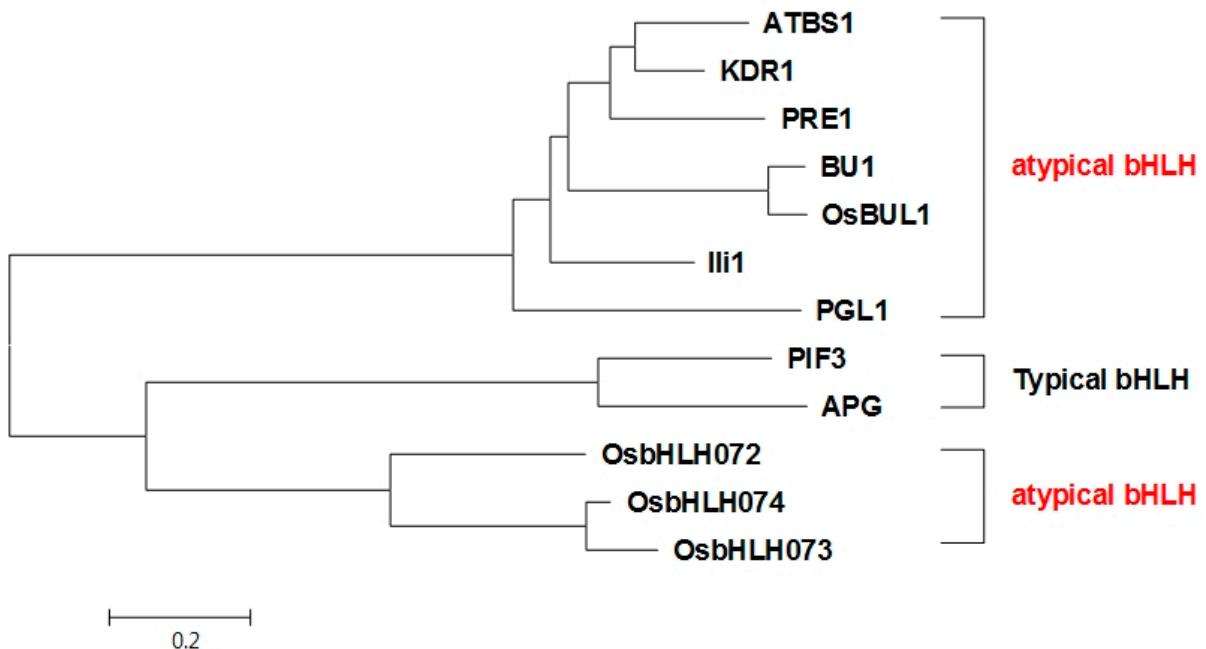

Figure S2. Phylogenetic tree of atypical and typical bHLH transcription factors from rice and *Arabidopsis*. Full-length amino acid residues were used from ATBS1 (AT1g74500), KDR1 (At1g26945), PRE1 (At5g39860), BU1 (Os06g12210), OsBUL1 (Os02g51320), Ili1 (Os04g54900), PGL1 (Os03g07510), PIF3 (AT1G09530) APG (Os05g04740), OsbHLH073 (Os05g14010), OsbHLH074 (Os01g13000), and OsbHLH072 (Os02g17680). Phylogenetic analyses were conducted with ClustalW and MEGA 7.0. Tree was generated by Neighbor-joining method.

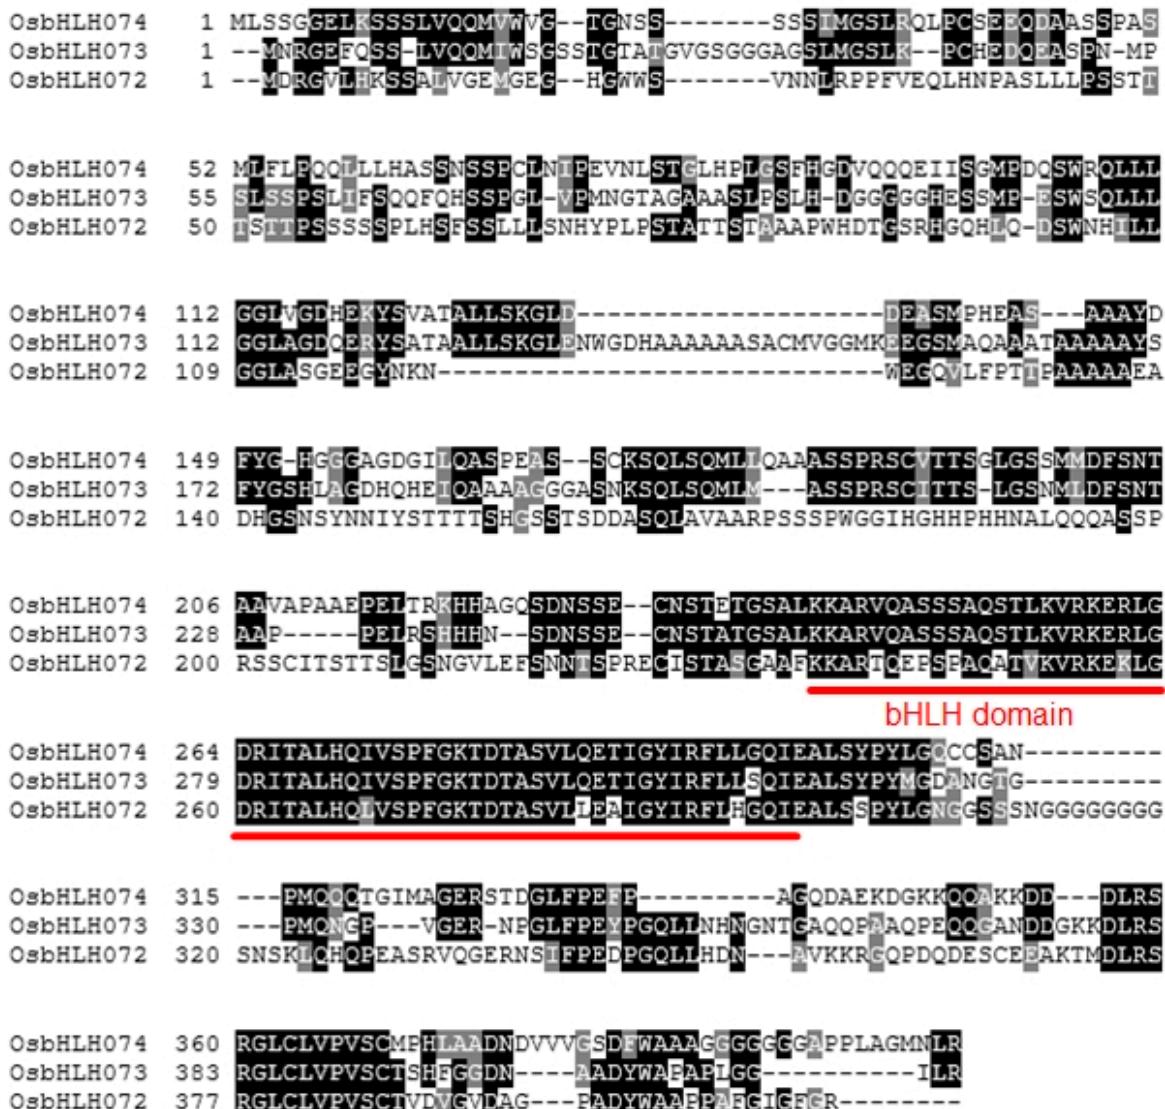

Figure S3. Multiple sequence alignment of OsbHLH072, OsbHLH073, and OsbHLH074 proteins. Black shade indicates identical amino acid and gray shade indicates similar amino acids. Underline indicates bHLH domain.
