

Supplementary figures:

Supplementary Figure S1: Quantitative analysis of viral infection specificity. Cells positive for any of the following markers were quantified (red circles), as well as cells positive both for the marker and for mCherry (Gad67 for inhibitory neurons, Gfap for astrocytes, Iba1 for microglia and Olig2 for oligodendrocytes).

Supplementary Figure S2: Quantitative analysis of viral infection efficacy. In all the Cre positive infected cells, no Tfii-i expression was measured.
