

Supplementary figure

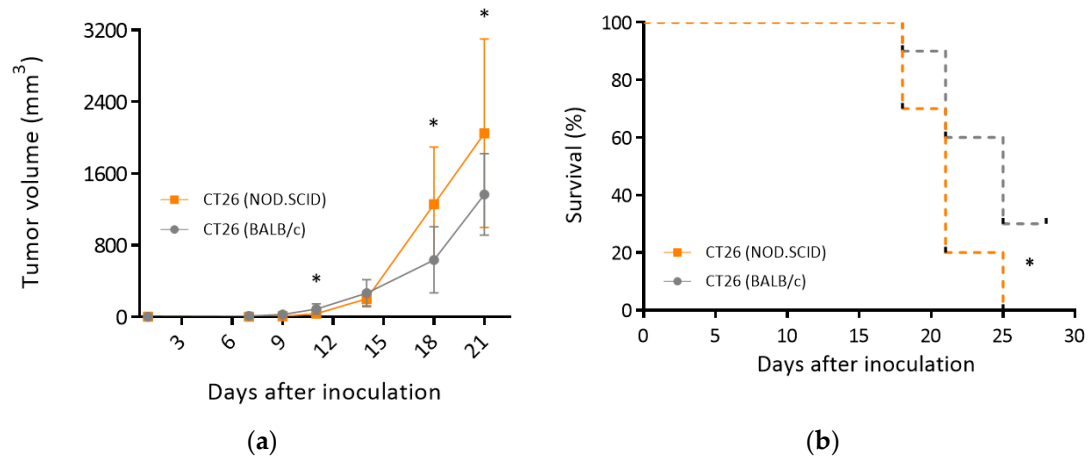

Figure S1. CT26/SCID tumors exhibiting malignant phenotypes. (a) The CT26 tumors were injected into NOD.SCID and syngeneic BALB/c mice. The tumor volume from each strain was (n = 10); (b) Overall survival time was evaluated and mice were excluded from this study due to ulcerations at the tumor site or tumor volumes above 1500 mm³. Statistical analyses were performed with two-way ANOVA and Tukey's post hoc test, Kaplan–Meier survival method for survival analysis, or Mann–Whitney U test. n.s., no significant difference; *, $P < 0.05$; **, $P < 0.01$.
