

## *Supplementary Materials*

# **Mobile Vaccination Teams for Improving Vaccination Coverage in the Kyrgyz Republic: Results of a National Health System-Strengthening Project during the First Two Years of the COVID-19 Pandemic**

**Table S1. Standards for Reporting Implementation Studies: the StaRI checklist**

The primary focus of implementation science is the implementation strategy (column 1) and the expectation is that this will always be completed.

The evidence about the impact of the intervention on the targeted population should always be considered (column 2) and either health outcomes reported or robust evidence cited to support a known beneficial effect of the intervention on the health of individuals or populations.

The StaRI standards refers to the broad range of study designs employed in implementation science. Authors should refer to other reporting standards for advice on reporting specific methodological features. Conversely, whilst all items are worthy of consideration, not all items will be applicable to, or feasible within every study.

Checklist item	Reported on page #	Implementation Strategy	Reported on page #	Intervention
		"Implementation strategy" refers to how the intervention was implemented		"Intervention" refers to the healthcare or public health intervention that is being implemented.
<b>Title and abstract</b>				
Title	1	1	Identification as an implementation study, and description of the methodology in the title and/or keywords	
Abstract	2	1	Identification as an implementation study, including a description of the implementation strategy to be tested, the evidence-based intervention being implemented, and defining the key implementation and health outcomes.	
<b>Introduction</b>				
Introduction	3	1-2	Description of the problem, challenge or deficiency in healthcare or public health that the intervention being implemented aims to address.	
Rationale	4	1-2	The scientific background and rationale for the implementation strategy (including any underpinning theory/framework/model, how it is expected to achieve its effects and any pilot work).	6 The scientific background and rationale for the intervention being implemented (including evidence about its effectiveness and how it is expected to achieve its effects).
Aims and objectives	5	2	The aims of the study, differentiating between implementation objectives and any intervention objectives.	
<b>Methods: description</b>				
Design	6	2	The design and key features of the evaluation, (cross referencing to any appropriate methodology reporting standards) and any	

			changes to study protocol, with reasons		
Context	7	3	The context in which the intervention was implemented. (Consider social, economic, policy, healthcare, organisational barriers and facilitators that might influence implementation elsewhere).		
Targeted 'sites'	8	3	The characteristics of the targeted 'site(s)' (e.g. locations/personnel/resources etc.) for implementation and any eligibility criteria.	8, Supp table S2	The population targeted by the intervention and any eligibility criteria.
Description	9	3	A description of the implementation strategy	6	A description of the intervention
Sub-groups	10	NA	Any sub-groups recruited for additional research tasks, and/or nested studies are described		
<b>Methods: evaluation</b>					
Outcomes	11	4	Defined pre-specified primary and other outcome(s) of the implementation strategy, and how they were assessed. Document any pre-determined targets	Supp table S7	Defined pre-specified primary and other outcome(s) of the intervention (if assessed), and how they were assessed. Document any pre-determined targets
Process evaluation	12	Table S4	Process evaluation objectives and outcomes related to the mechanism by which the strategy is expected to work		
Economic evaluation	13	NA	Methods for resource use, costs, economic outcomes and analysis for the implementation strategy	NA	Methods for resource use, costs, economic outcomes and analysis for the intervention
Sample size	14	NA	Rationale for sample sizes (including sample size calculations, budgetary constraints, practical considerations, data saturation, as appropriate)		
Analysis	15	4	Methods of analysis (with reasons for that choice)		
Sub-group analyses	16	NA	Any a priori sub-group analyses (e.g., between different sites in a multicentre study, different clinical or demographic populations), and sub-groups recruited to specific nested research tasks		

**Table S2. Vaccination schedule in Kyrgyzstan**

<b>Birth</b>	<b>2m</b>	<b>3m</b>	<b>5m</b>	<b>9m</b>	<b>12m</b>	<b>24m</b>	<b>6 y</b>	<b>11 y</b>	<b>16 y</b>	<b>26y</b>	<b>36 y</b>	<b>46 y</b>	<b>56 y</b>
HepB	DTP-Hib-HepB	3,5 m - DTP-Hib-HepB	DTP-Hib-HepB	IPV	MMR	DPT	DT	Td	Td	Td	Td	Td	Td
BCG	PCV13	IPV	PCV13		PCV13		MMR	HPV (girls, 2 times)					
	OPV	OPV	OPV										
	RV-5	RV-5	RV-5										

Abbreviations: BCG= antituberculois vaccine; DTP = difteria, tetanus, pertussis vaccine; IPV = inactivated polio vaccine; HepB= hepatitis B vaccine; Hib= Hemanophilus Influentiae Type B; HPV= Human papilloma Virus; MMR = measles, mups, rubella vaccine; OPV = oral Polio vaccine; Penta = pentavalent vaccine; PCV13 = Pneumococcal 13 valent vaccine; RV-5 = rotavirus 5-valent vaccine; Td = tetanus difteria vaccine
