Because of the uncertain meaning in the original publication [1], the authors wish to correct the first paragraph of the introduction and update the references with new ones that are more closely related. The changes are as follows:

- Correcting the paragraph to be:
  "The majority of the energy generated globally comes from fossil fuels, such as coal, oil, and natural gas [1,2]. These fuels release greenhouse gases into the atmosphere, which increases pollution [3–5]. Moreover, these fuels are in perpetual depletion, which dangerously reduces the reserves of these types of energy for future generations. Faced with all these grievances, countries with enormous energy need to resort to renewable energy such as solar, hydro, wind, fuel cells, and geothermal energy [6,7]."
- Updating the references [1–3,7,25,35–37] to be:
