

SUPPLEMENTARY MATERIALS

A colorimetric strategy based on aptamer catalyzed hairpin assembly for the on-site detection of *Salmonella typhimurium* in milk

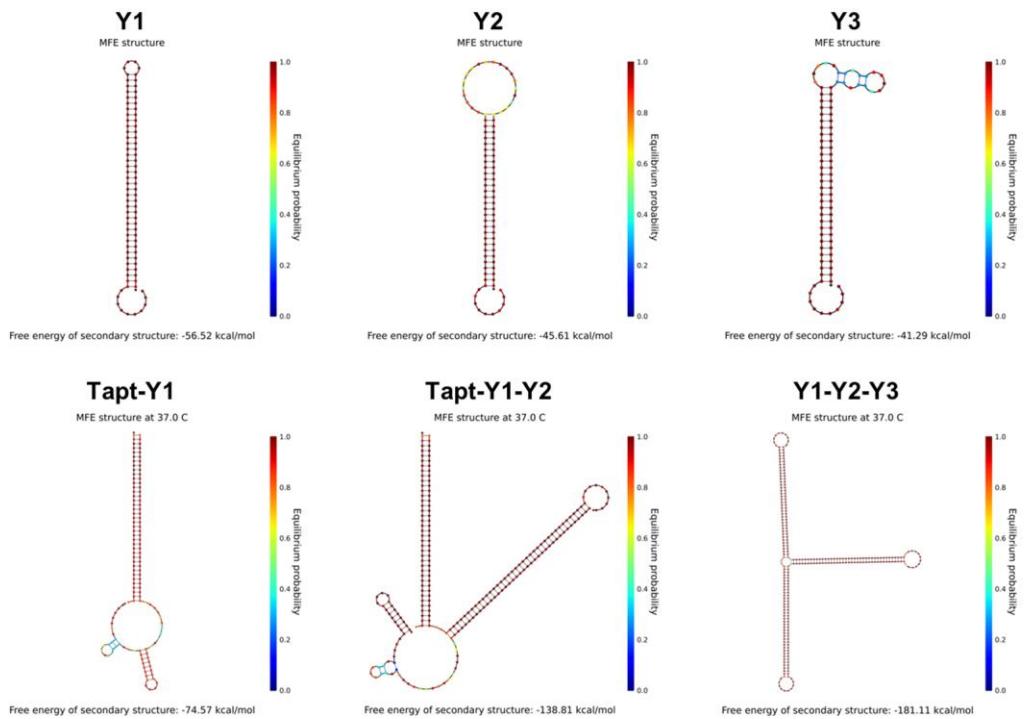

Figure S1. Simulation and prediction on the secondary structures of the hairpins Y1, Y2, Y3 and hybrids based on the NUPACK software.

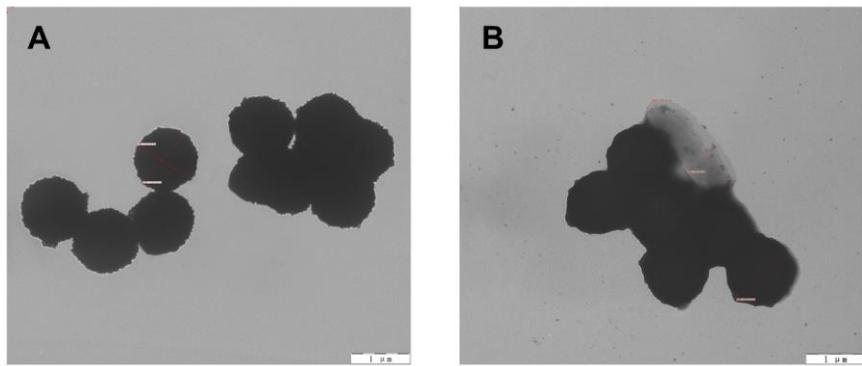

Figure S2. TEM image of SMBs (A) and SMBs-Bapt-*S. typhimurium* (B).

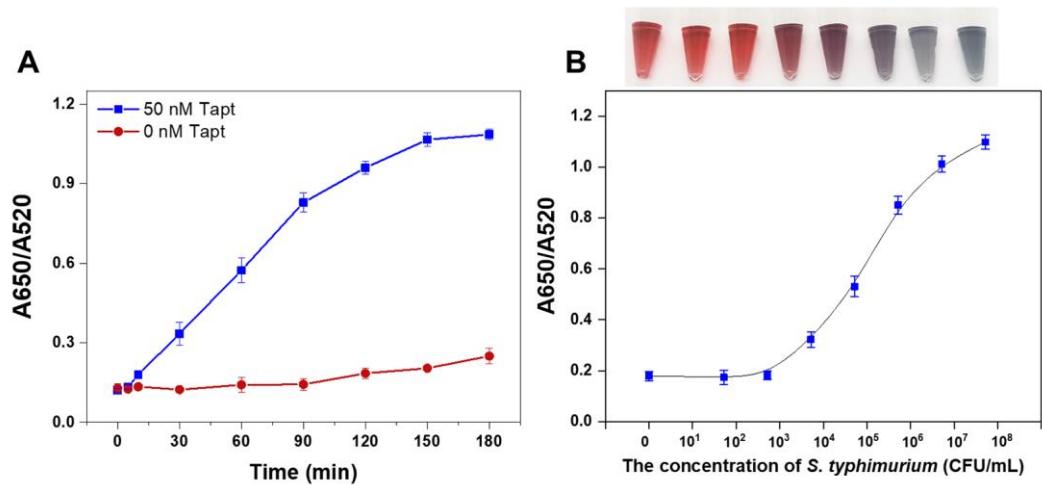

Figure S3. Effect of incubation time on conventional CHA (A). Sensitivity of conventional CHA for detection of *S. typhimurium* with concentrations ranging from 5.2×10^1 to 5.2×10^7 CFU/mL (B). The insert shows the AuNPs visualization colorimetric photo of the corresponding bacterial sample.

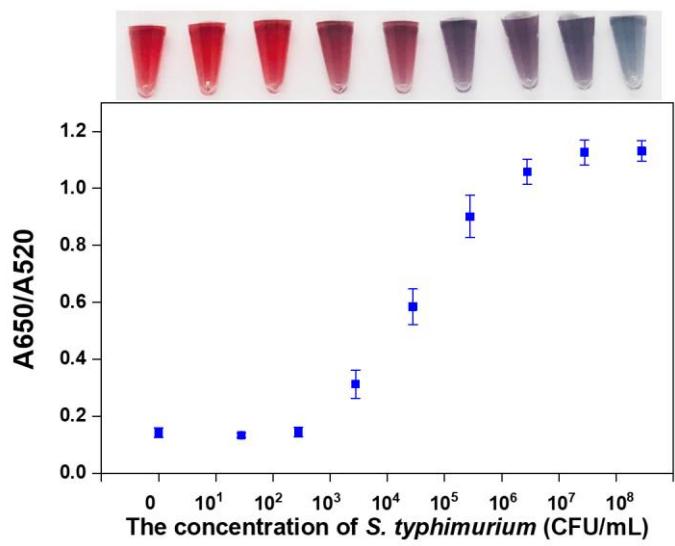

Figure S4. Detection of *S. typhimurium* in contaminated milk using the on-site colorimetric strategy based on Y-CHA circuit. The insert shows the AuNPs visualization colorimetric photo of the corresponding bacterial sample.
