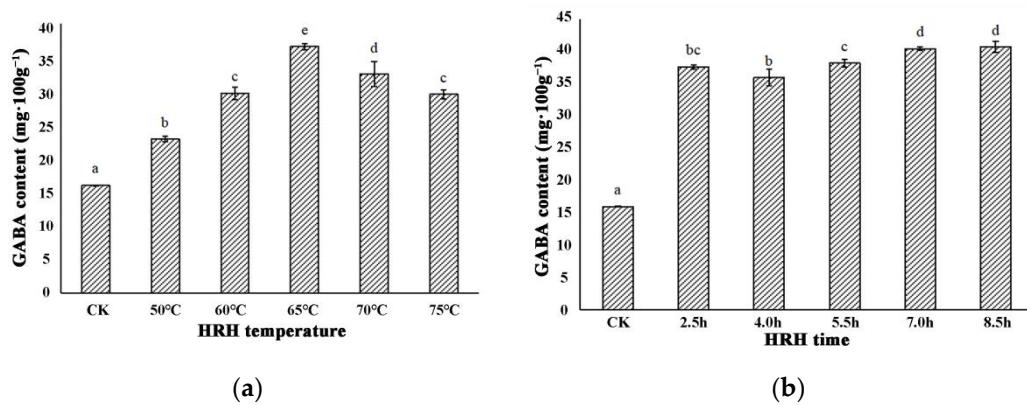

Figure S1. Effect of heat and relative humidity (HRH) treatment on GABA content. (a) The effect of HRH temperature on GABA content; (b) the effect of HRH time on GABA content. Different letters denote significant difference among different HRH treatment conditions at the level $p < 0.05$. According to the capacity and efficiency of GABA accumulation, 65°C and 2.5h were used as the treatment condition in this experiment.
