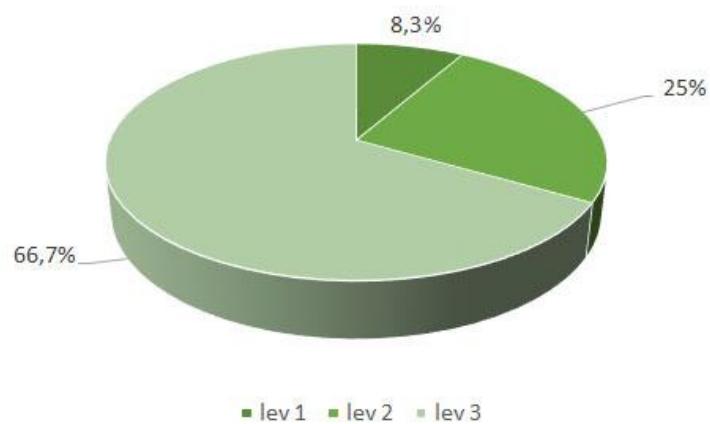

Figure S1. Sensory three-point scale evaluation of pine honey samples.

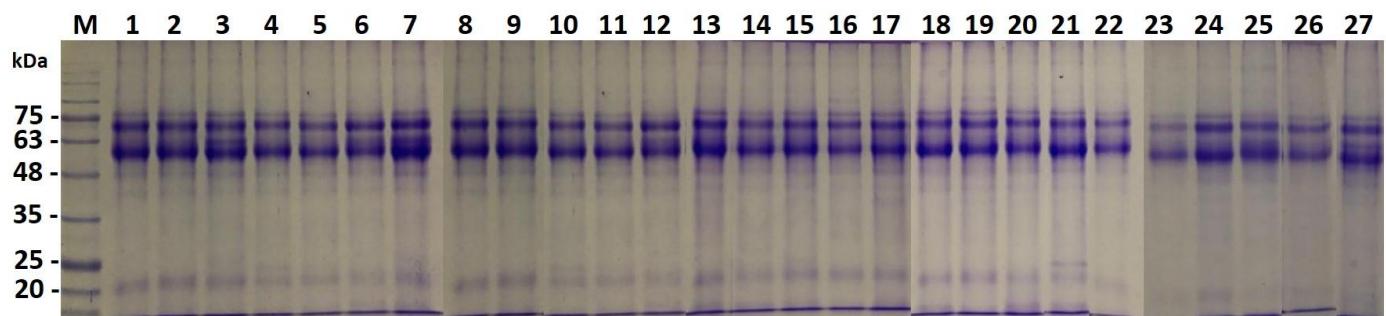

Figure S2. Protein profile of pine honeydew honey samples ($n=27$) from Greece. A $15 \mu\text{l}$ of diluted honey samples (50% w/w in distilled water) were separated by 12% SDS-PAGE gels and protein content assessed after gel staining with Coomassie Brilliant Blue R-250. M, protein pre-stained marker.

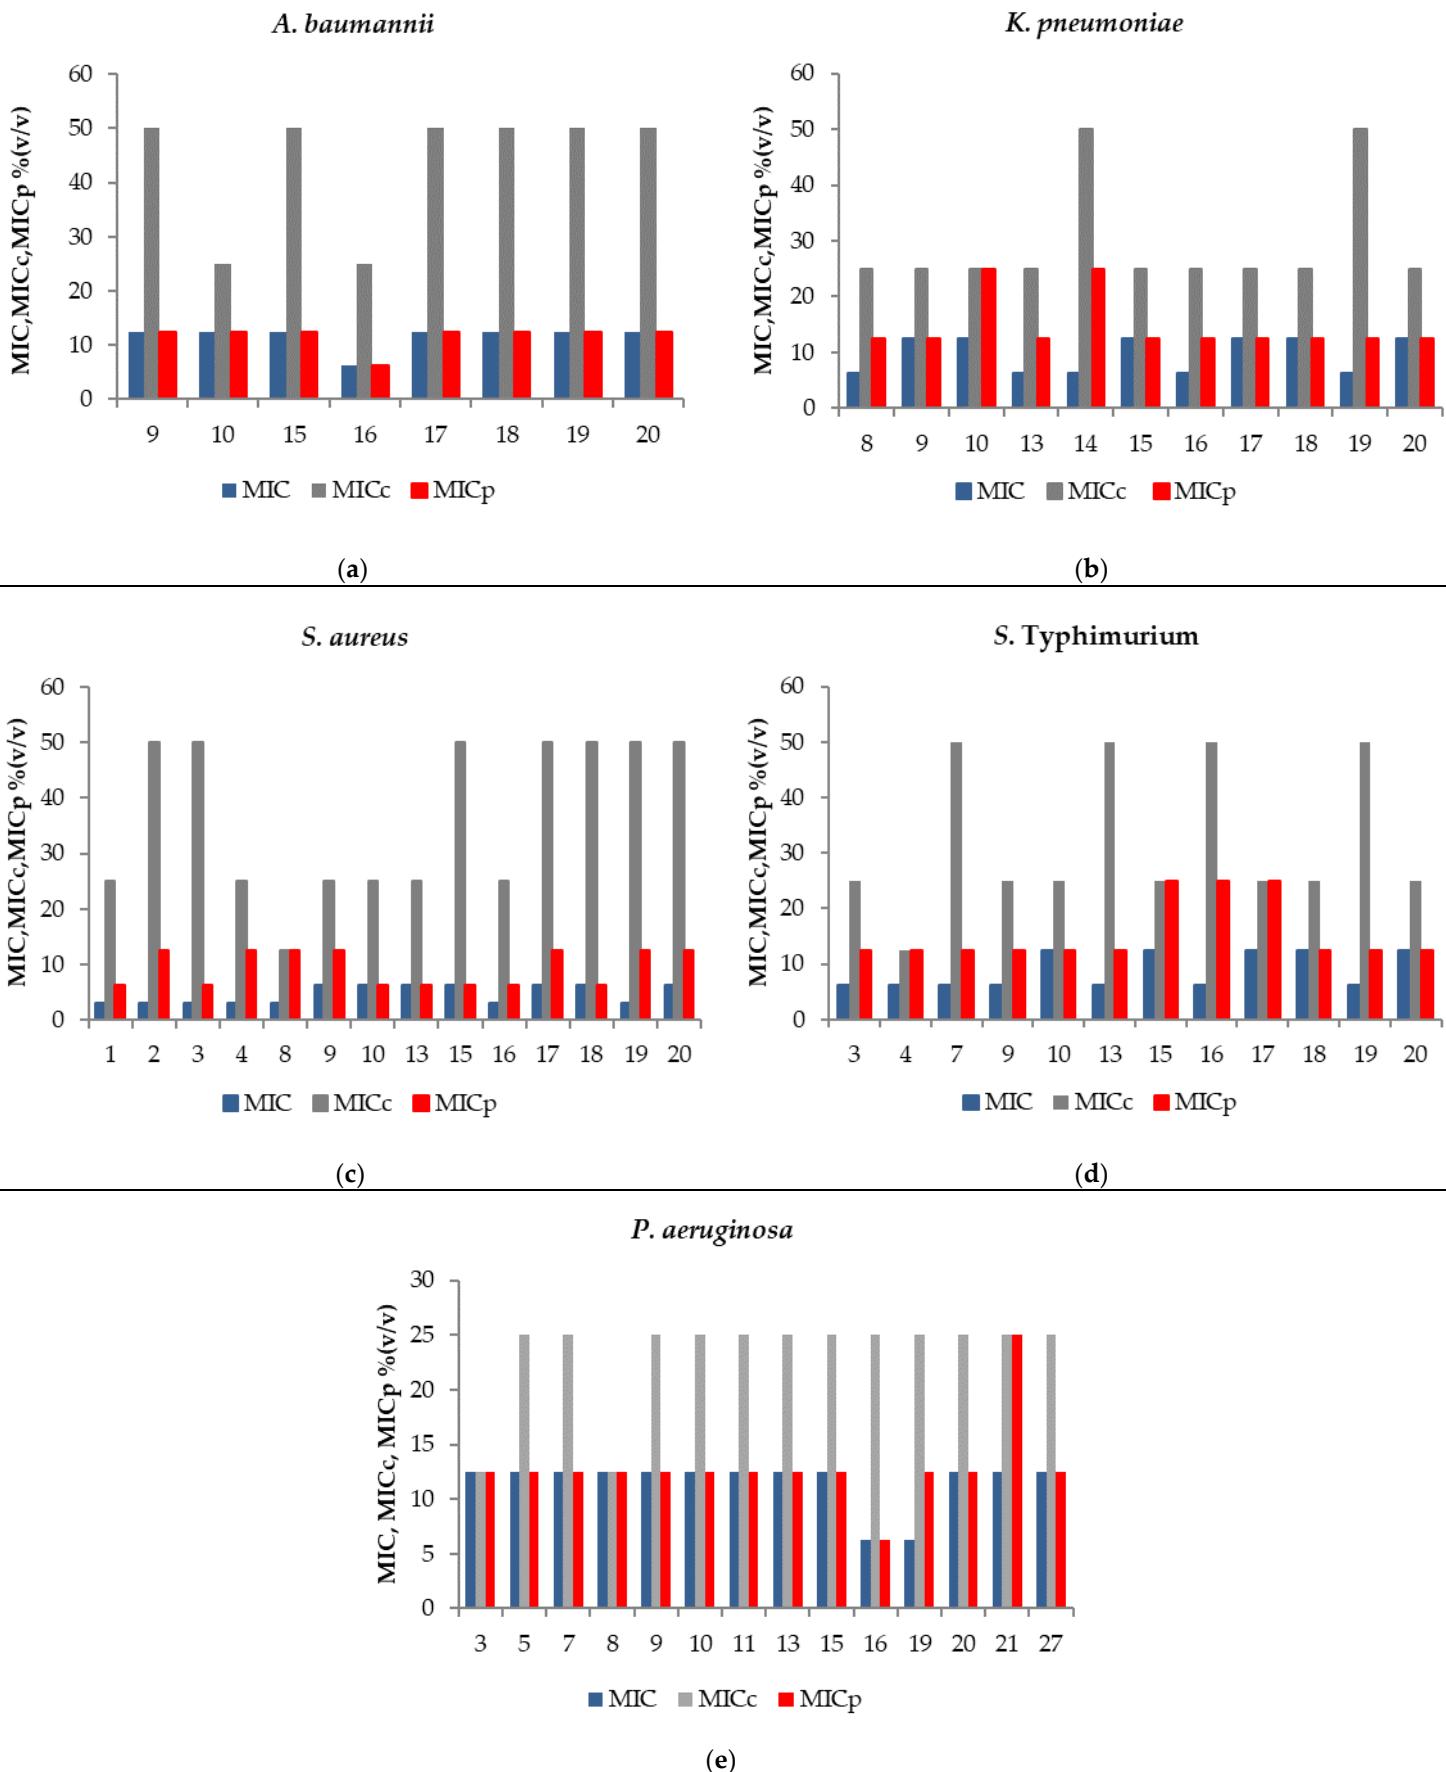

Figure S3. MIC values after proteinase K (MICp) and bovine catalase (MICc) treatment of honey samples tested against *A. baumannii* (a), *K. pneumoniae* (b), *S. aureus* (c), *S. typhimurium* (d) and *P. aeruginosa* (e). MIC values are expressed as %(v/v).

Table S2. Correlation coefficient (*r*, first value) and significance (second value) of physicochemical parameters of pine honey calculated by Spearman's correlation analysis.
