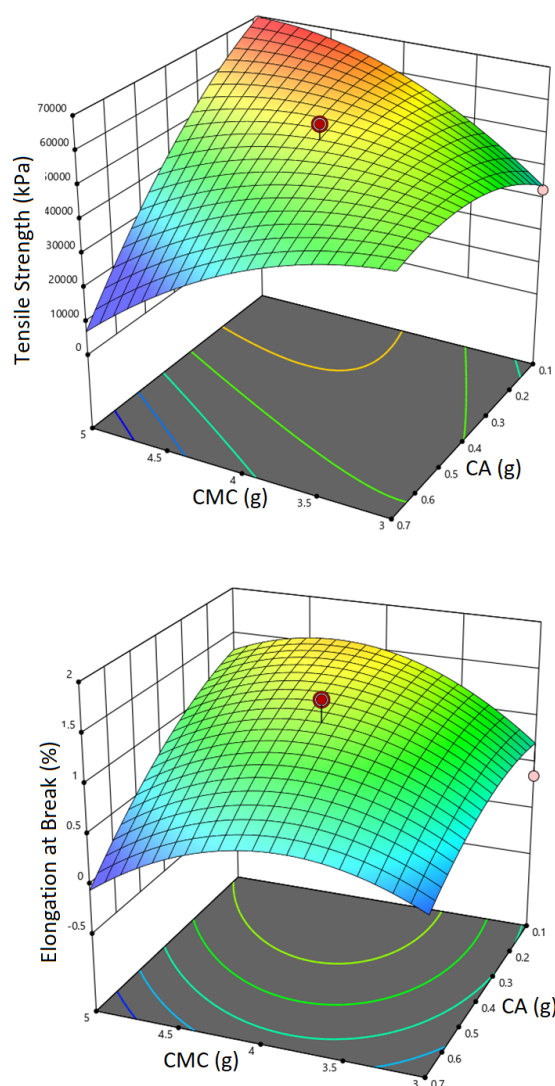

Figure S1. Response surface plots representing the effect of Sodium Carboxymethyl cellulose (CMCNa) and citric acid (CA) concentration on Tensile strength (A) and Elongation at break (B).

Figure S2. Physical appearance of the prepared films

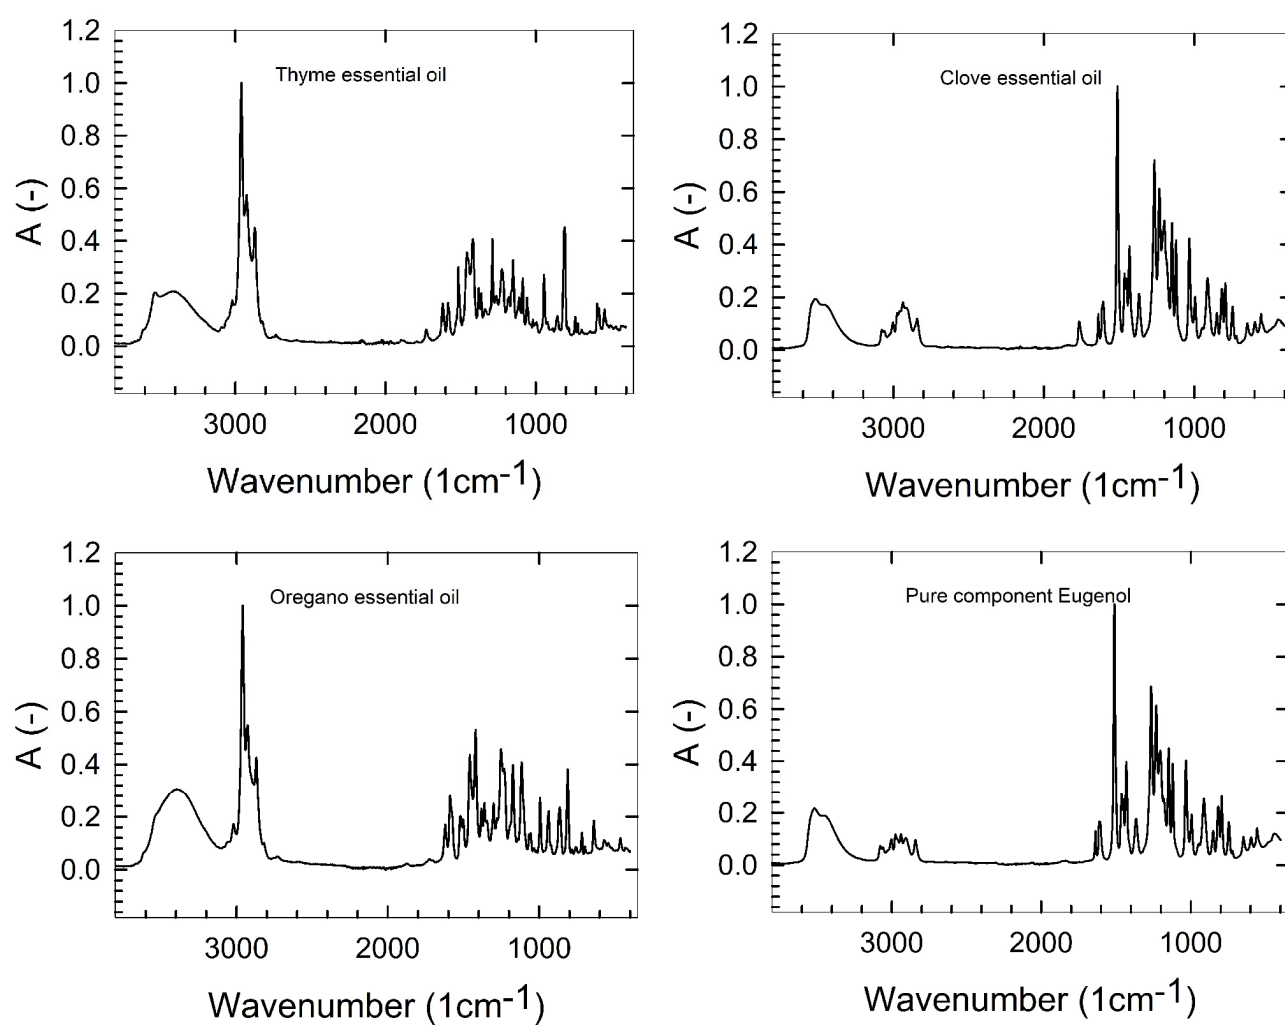

Figure S3. FT-IR analysis of the pure bioactive substances.

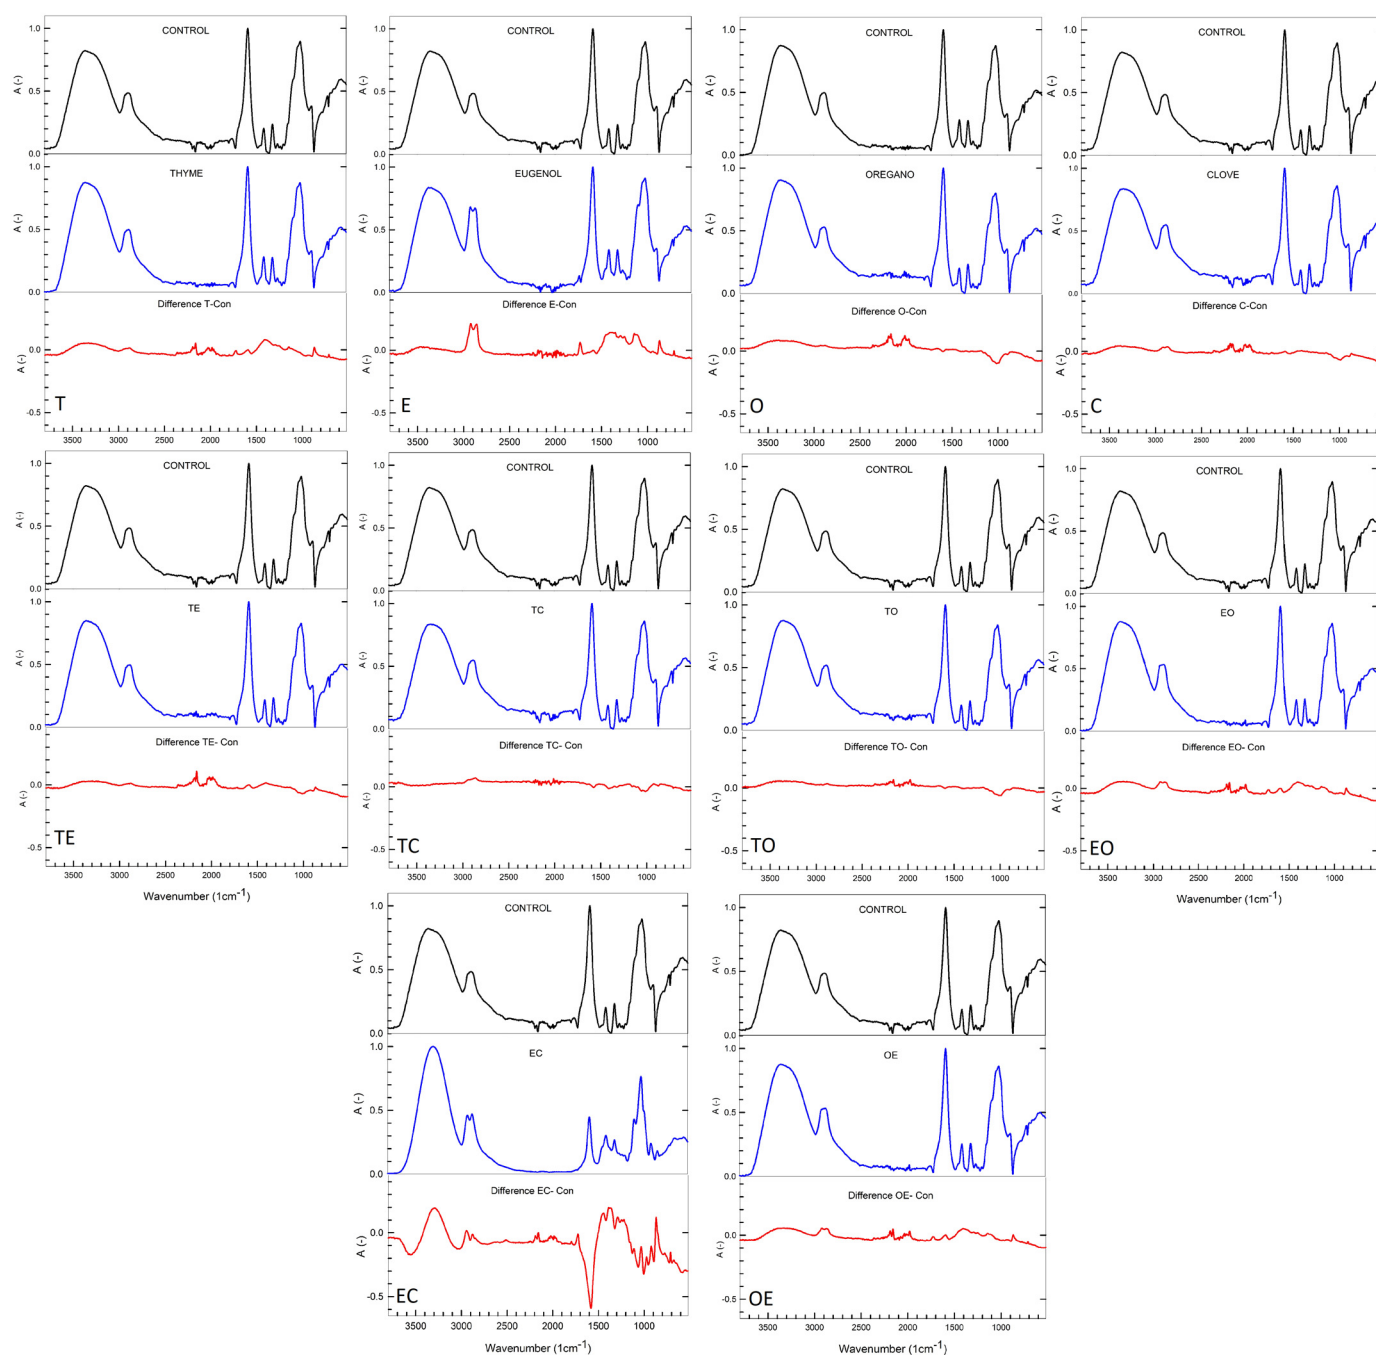

Figure S4. FT-IR analysis of films with bioactive components. The graphs are presented after subtracting the sample values from the control values to show the presence of bioactive components.
