

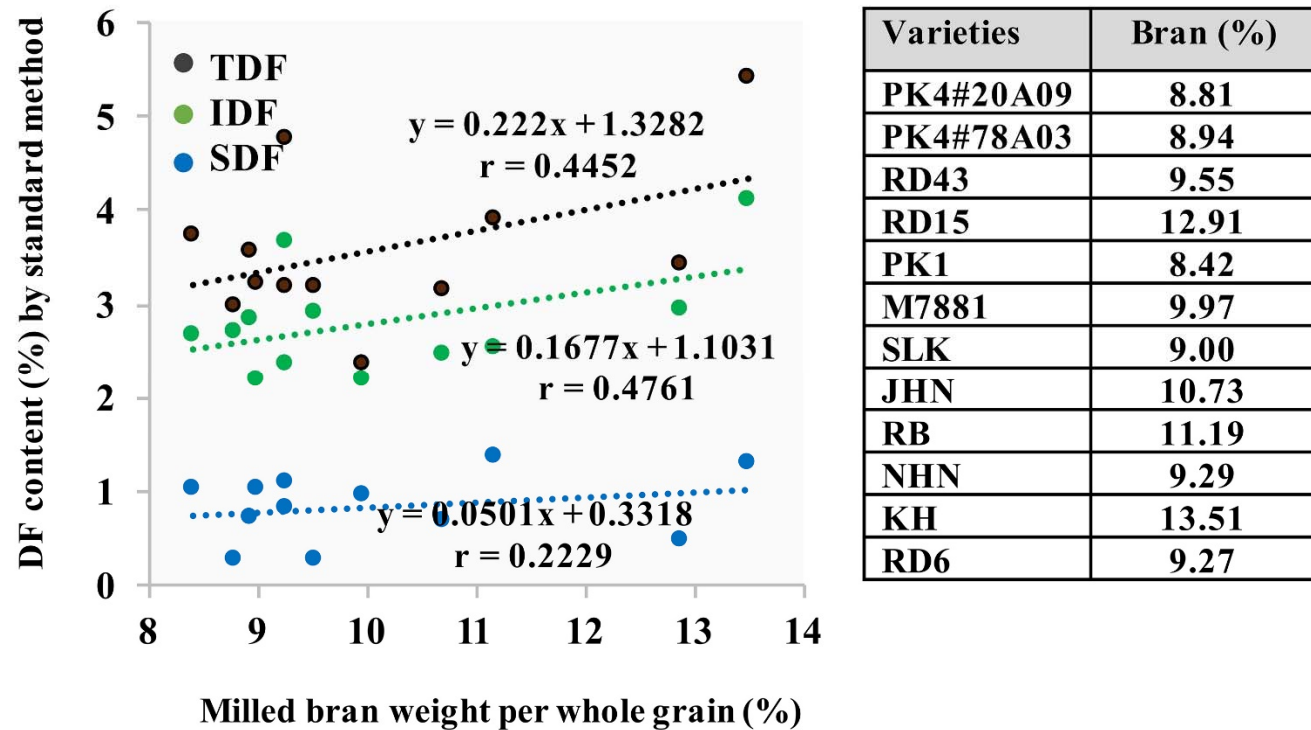

**Figure S1.** Linear regression between the percentage of dietary fibre content: SDF, IDF and, TDF, and (A) the percentage of bran layer weight without germ in whole grain rice (BW, g/100 g) determined by the alkaline method or (B) the bran layer weight without germ per surface area (BWS, mg/cm<sup>2</sup>). Rice varieties with ASV equal to exactly 1 are shown as circles with red border.  
 \* Correlation is significant at the 0.05 level; \*\* Correlation is significant at the 0.01 level.

**Figure S2.** Linear regression between the percentage of dietary fibre content: SDF, IDF and, TDF, and the percentage of the rice bran weight determined by the milling method.
