

**Table S1** Fitting curves of bioactive compounds.

Components	Regression equation	R <sup>2</sup>	Linearity range (µg/mL)
α-tocopherol	Y = 9366.5 X + 7205.1	0.9986	2.5860-103.4397
β-tocopherol	Y = 9257.6 X + 757.09	0.9984	0.4016-16.0648
γ-tocopherol	Y = 9292.8 X + 48558	0.9984	15.8762-635.0409
δ-tocopherol	Y = 9399 X + 13782	0.9985	6.1362-245.4461
Polyphenol	Y = 0.0958 X + 0.0293	0.9990	1-15

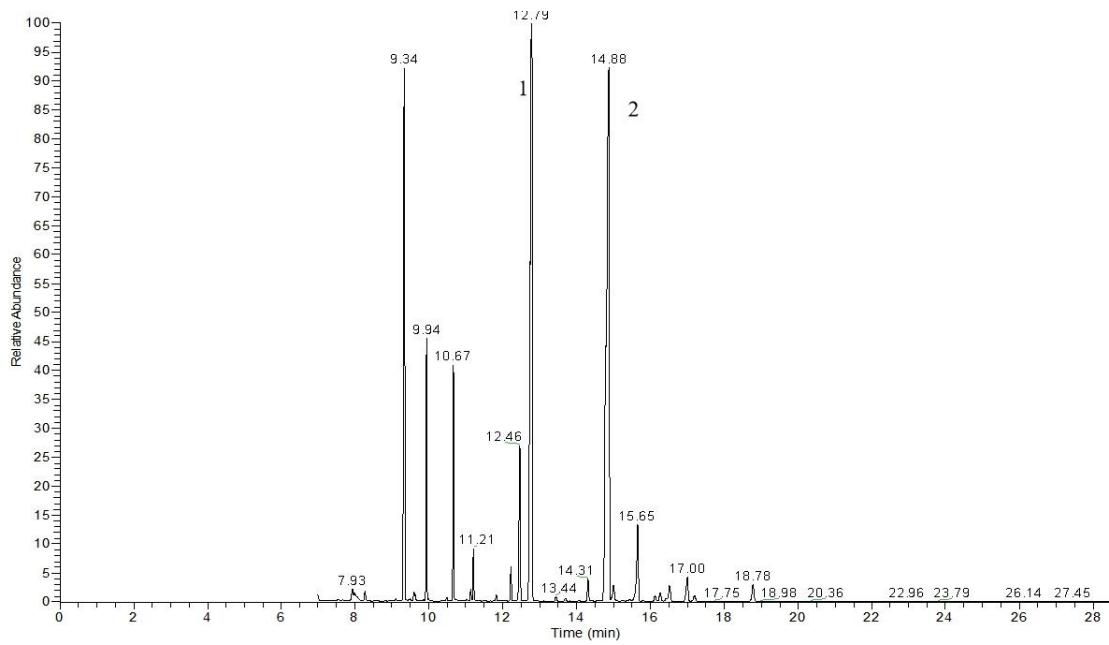

**Figure S1.** Fatty acid composition gas chromatogram of *Idesia polycarpa* pulp oil from five regions. 1- palmitic acid, 2-palmitoleic acid, 3-heptadecanoic acid, 4- stearic acid, 5-oleic acid, 6-linoleic acid, 7-linolenic acid, 8-arachidic acid, 9- heneicosanoic acid.

**Figure S2.** HPLC of tocopherols in *Idesia polycarpa* pulp oil. 1- $\alpha$ -tocopherol, 2- $\beta$ -tocopherol, 3- $\gamma$ -tocopherol, 4- $\delta$ -tocopherol.

**Figure S3.** Total ion chromatogram of  $\beta$ -sitosterol in *Idesia polycarpa* pulp oil.  
1- $5\alpha$ -cholestane, 2- $\beta$ -sitosterol.
