

## SUPPLEMENTARY MATERIAL

**Table S1** Carcass characteristics, individual muscle weights (right-hand side) and ultimate pH values of muscles from male (n = 6) and female (n = 6) fallow deer.

**Table S2** Proximate composition of *longissimus thoracis et lumborum* muscles from selected game and ruminant livestock species, including sex comparisons where applicable. Values obtained in the present study appear in the first row. Significant differences are indicated in bold. NS = not specified.

**Table S3** Interactions between the main effects (sex × muscle) in the measurement of the proximate and mineral composition of wild fallow deer (n = 12) from South Africa. All interactions were non-significant.

**Table S4** Mineral composition (mg/kg) of *longissimus thoracis et lumborum* muscles from selected game species, including sex comparisons where applicable. Values obtained in the present study appear in the first row. Significant differences are indicated in bold. NS = not specified.

**Table S1** Carcass characteristics, individual muscle weights (right-hand side) and ultimate pH values<sup>†</sup> of muscles from male (n = 6) and female (n = 6) fallow deer

Sex	No.	Carcass characteristics						Muscle weights						Ultimate pH (36 h)
