Contents

Figure S1. The lag structure for percent changes of cerebrovascular mortality associated with a 10 $\mu\text{g}/\text{m}^3$ increase in NO_2 over lag 0 to 14 days.

Figure S2. The cumulative exposure-response curves for the relationships between daily concentrations ($\mu\text{g}/\text{m}^3$) of NO_2 and cerebrovascular mortality in subgroups over 0 to 7 days.
