

Supplementary Materials: Evaluating the Joint Toxicity of Two Benzophenone-Type UV Filters on the Green Alga *Chlamydomonas reinhardtii* with Response Surface Methodology

Feijian Mao, Yiliang He and Karina Yew-Hoong Gin

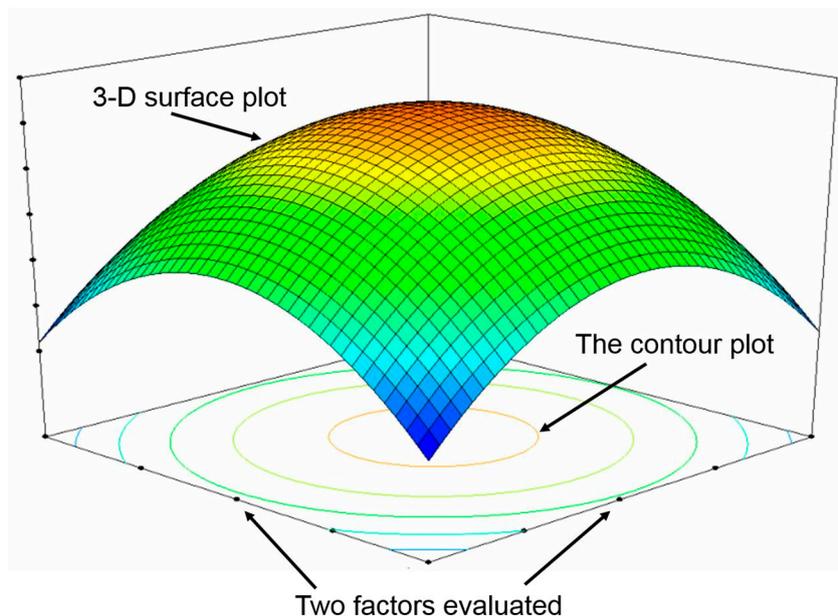

Figure S1. A typical graph obtained by RSM.

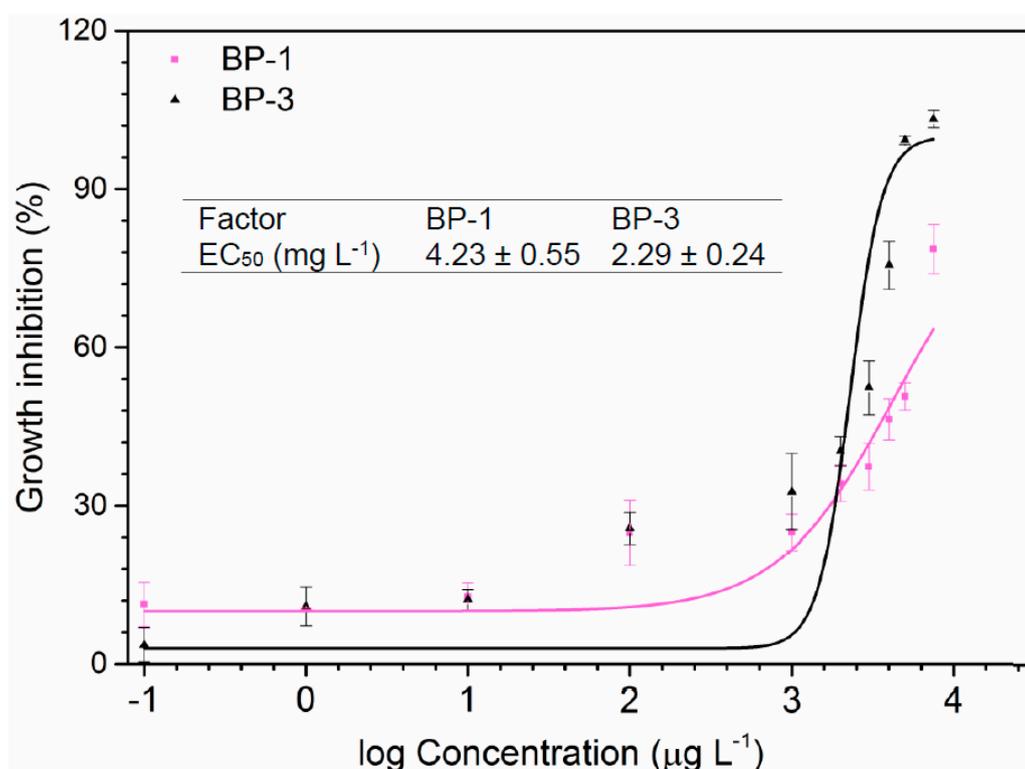

Figure S2. Dose-response curves of growth inhibition after exposing the green alga, *C. reinhardtii*, to individual BP-1 and BP-3 for 72 hours. Means and standard deviations are shown. The table in the figure shows the EC₅₀ values calculated for BP-1 and BP-3.
