

SUPPLEMTARY MATERTIAL

Assessing digital soil inventories for predicting streamflow in the headwaters of the Blue Nile

Anwar A. Adem, Yihun T. Dile, Abeyou W. Worqlul, Essayas K Ayana, Seifu A. Tilahun, and Tammo S, Steenhuis

Table S1: Calibrated parameters, their range and fitted values for the streamflow simulations using ADSWE, AfSIS and FAO in the Rib and Gomit watersheds. See Table 4 for the parameters descriptions. PVISSP means parameter values including sensitive soil parameters and PVESSP means parameter values excluding sensitive soil parameters. ADSWE, AfSIS, and FAO refer Amhara Design and Supervision Works Enterprise, Africa Soil Information Service, and Food and Agricultural Organization soil databases, respectively.

Parameters	Min value	Max value	Rib						Gomit								
			ADSWE			AFSIS			FAO			ADSWE			AFSIS		
			PVISSP	PVESSP	PVISSP

¹a means a given value is added to the existing parameter value, ²v means the existing parameter value is to be replaced by a given value, ³r means an existing parameter value is multiplied by (1+ a given value),
