Supplementary Table S2. Detailed breakdown of percentage of reads of HostEL treated vs no treatment enrichment on iSeq 100 and MiniSeq sequencing platforms. HostEL can enrich the percentage of reads by ~2 fold in plasma with high microbial concentrations (1.4 million cells/mL) and ~4 fold with low microbial concentration (140,000 cells/mL and 70,000 cells/mL) on iSeq 100 sequencing platform while enriching at least 1.5 fold on MiniSeq sequencing platform.
