

Hello, thank you for your attention!

We are here to offer you a questionnaire: this is your contribution to our research activity, at a time of prolonged fragility and uncertainty caused by the pandemic.

Your help will be instrumental in assessing the impact of lockdown in the period March-May 2020 on the growth and behavioral development of your dog, following isolation caused by the outbreak by COVID-19 and how much this has been able to influence in the relational field.

Fill out the questionnaire if your dog was between 1 and 5 months during the period March-May 2020 or if your dog was born between June 2020 and February 2021.

This is a multidisciplinary study resulting from the collaboration between the Department of Veterinary Medicine and Animal Production of the University of Naples Federico II and the Department of Psychology of Processes of Development and Socialization of the University of Rome La Sapienza.

Filling out the questionnaire will take about 10 minutes and we want to make sure that it is completely anonymous: in no way will it be possible to trace it back to you.

The data will be used only in aggregate form and in full compliance with current privacy legislation, as required by Legislative Decree 101/2018.

Good participation!
