

## Supplementary Material

**Table S1.** GenBank accession numbers of sequences used in the phylogenetic analyses of multiple genes.

Species Name	Specimen No.	GenBank accession no. <sup>1</sup>				
		ITS	<i>tub2</i>	<i>cal</i>	<i>tef1</i>	<i>rpb2</i>
<i>Aspergillus amoenus</i>	NRRL 4838	EF652480	EF652304	EF652392	-	EF652216
<i>Aspergillus angustatus</i>	CBS 273.65	EU448283	AY339993	EU443984	-	KU867013
<i>Aspergillus askiburgiensis</i>	CCF 4716	LN873940	LN873952	LN873965	-	LN873984
<i>Aspergillus asperescens</i>	NRRL 4770	EF652475	EF652299	EF652387	-	EF652211
<i>Aspergillus astellatus</i>	NRRL 2396	EF652446	EF652270	EF652358	-	EF652182
<i>Aspergillus aurantiobrunneus</i>	CBS 465.65	KF465770	KF499567	-	-	KY006764
<i>Aspergillus aurantiobrunneus</i>	NRRL 4545	EF652465	EF652289	EF652377	-	-
<i>Aspergillus aureolatus</i>	NRRL 5126	EF652501	EF652325	EF652413	-	EF652237
<i>Aspergillus austroafricanus</i>	NRRL 233	JQ301891	JN853963	JN854025	-	JN853814
<i>Aspergillus brasiliensis</i>	CBS 101740	FJ629321	FJ629272	FN594543	-	KY006765
<i>Aspergillus caespitosus</i>	NRRL 1929	EF652428	EF652252	EF652340	-	EF652164
<i>Aspergillus carbonarius</i>	CBS 111.26	NR_111094	GU296700	FN594544	-	-
<i>Aspergillus carbonarius</i>	NRRL 369	EF661204	EF661099	EF661167	-	EF661068
<i>Aspergillus costaricaensis</i>	CBS 115574	NR_103604	GU296699	FN594545	-	-
<i>Aspergillus creber</i>	NRRL 58592	JQ301889	JN853980	JN854043	-	JN853832
<i>Aspergillus cojetkovicii</i>	NRRL 227	EF652440	EF652264	EF652352	-	EF652176
<i>Aspergillus ellipticus</i>	CBS 70779	AY585548	AY585530	-	-	-
<i>Aspergillus eucalypticola</i>	53A2	EU482439	EU482435	EU482433	-	-
<i>Aspergillus filifer</i>	CBS 113636	EU448277	-	EU443973	-	KU866932
<i>Aspergillus fructus</i>	NRRL 239	EF652449	EF652273	EF652361	-	EF652185

<sup>1</sup>GenBank - Internal transcribed spacer regions (ITS),  $\beta$ -tubulin (*tub2*), calmodulin (*cal*), partial elongation factor 1-alpha gene (*tef1*), and the second largest protein subunit of DNA-directed RNA polymerase II (*rpb2*).

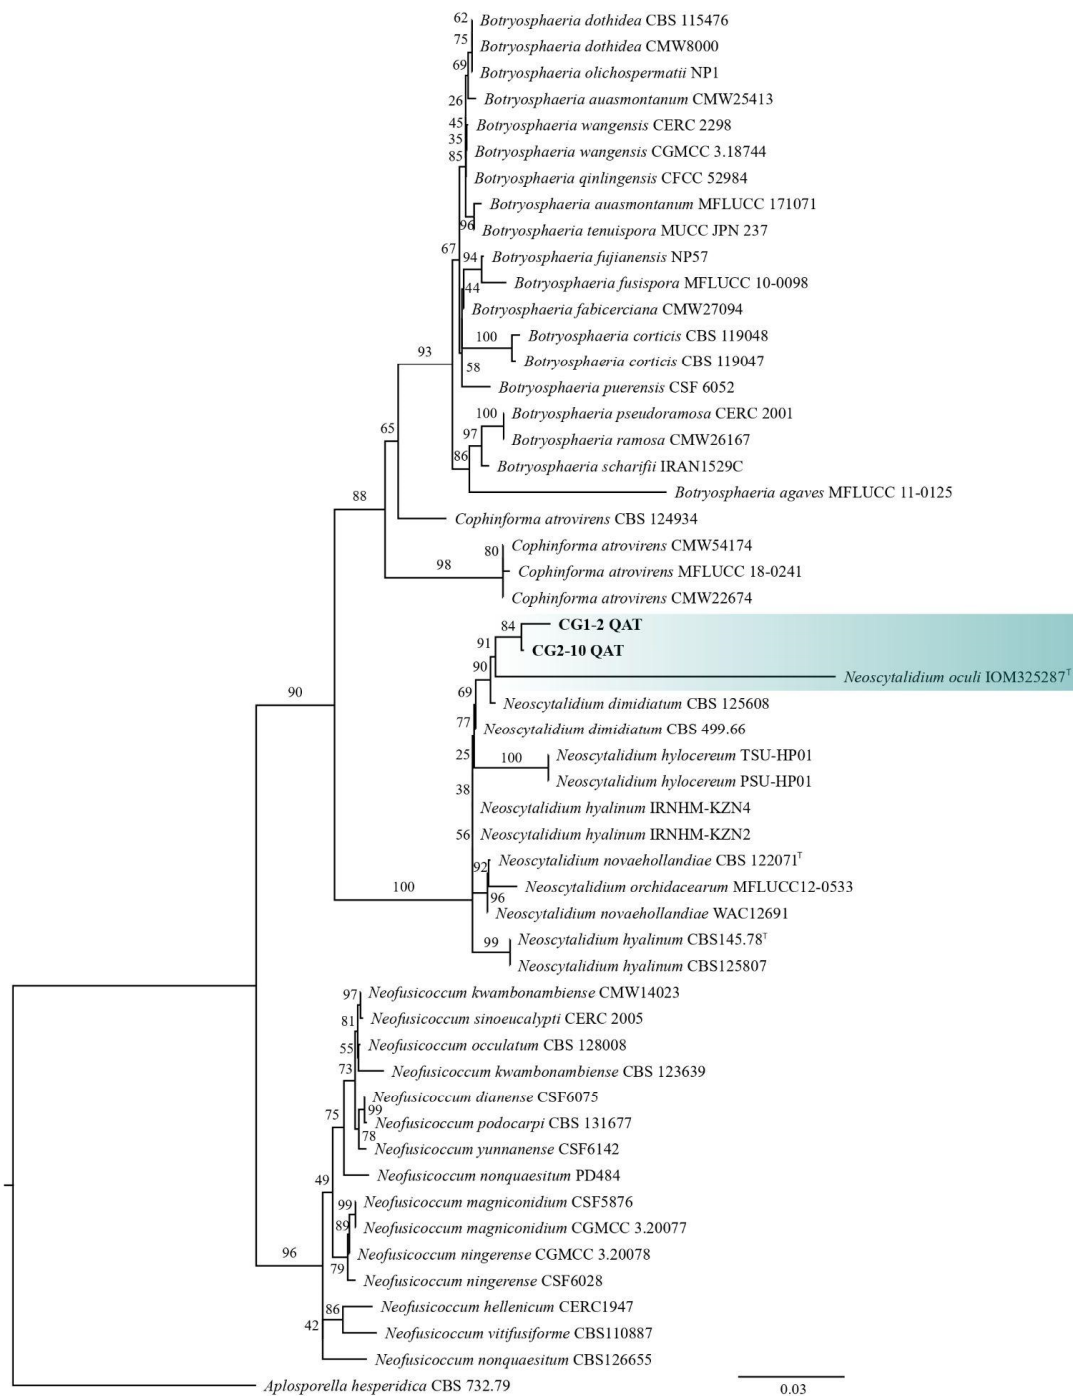

-: Sequence not available.

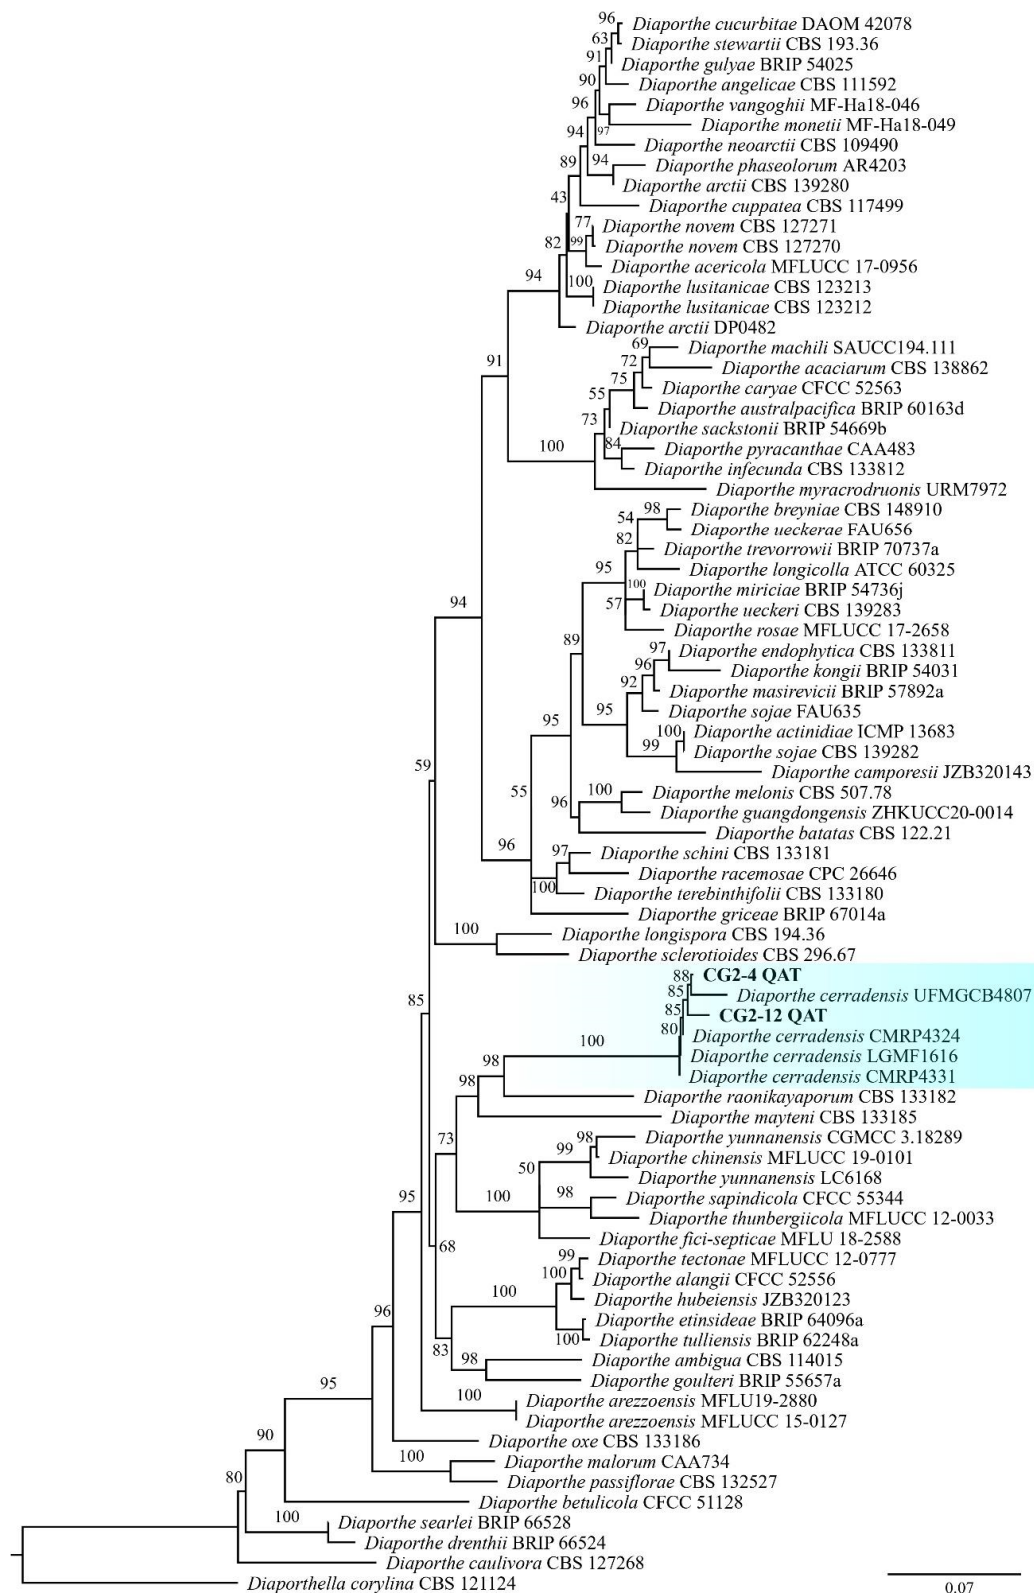

**Figure S1.** Concatenated phylogenetic analysis by Maximum Likelihood (ML) of the endophytic fungi CF1-3, isolated from *Fridericia chica* leaves, and CG2-7, isolated from *F. chica* branches, based on partial sequences of ITS, *tub2*, *cal* and *rpb2*. The scale bar of 0.07 represents the number of changes and the number indicates the bootstrap support of the branches. The sequences of the isolates studied here are highlighted in bold. The tree was rooted in *Hamigera avellanea* NRRL 1938.

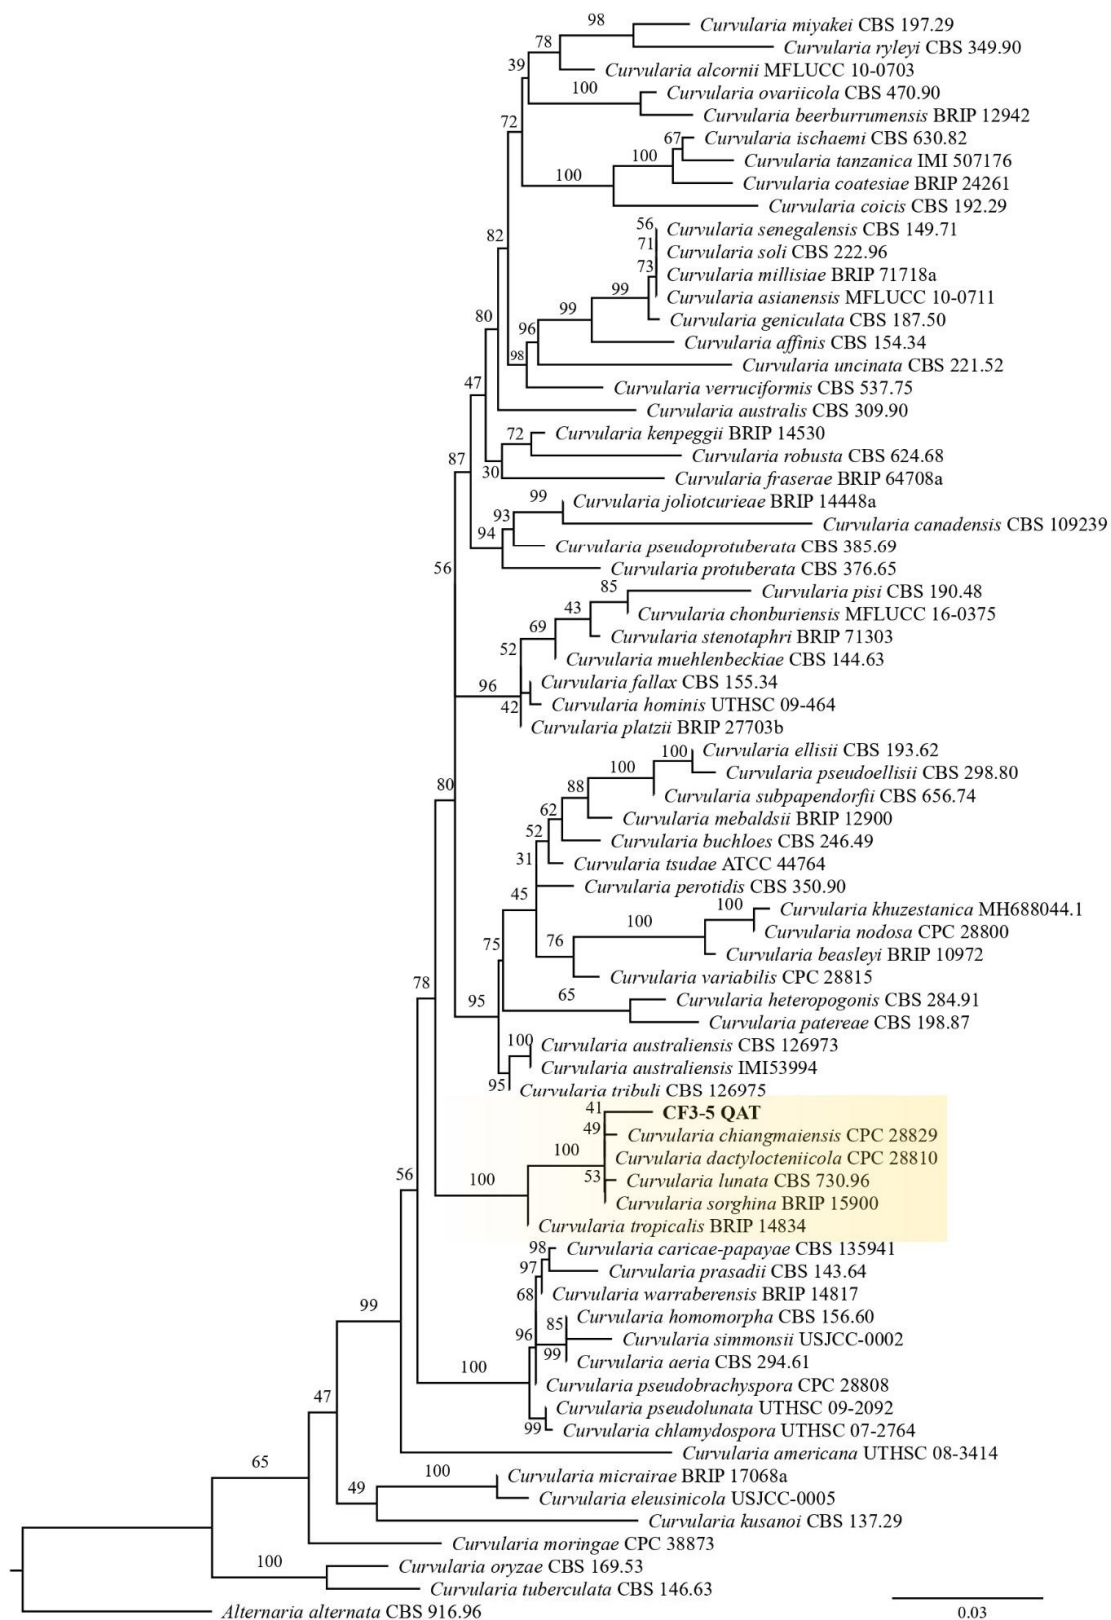

**Figure S2.** Concatenated phylogenetic analysis by Maximum Likelihood (ML) of the endophytic fungus CG2-5, isolated from *Fridericia chica* branches, based on partial sequences of *tub2* and *rpb2*. The scale bar of 0.08 represents the number of changes and the number indicates the bootstrap support of the branches. The sequences of the isolates studied here are highlighted in bold. The tree was rooted in *Aspergillus glaucus* NRRL 116.

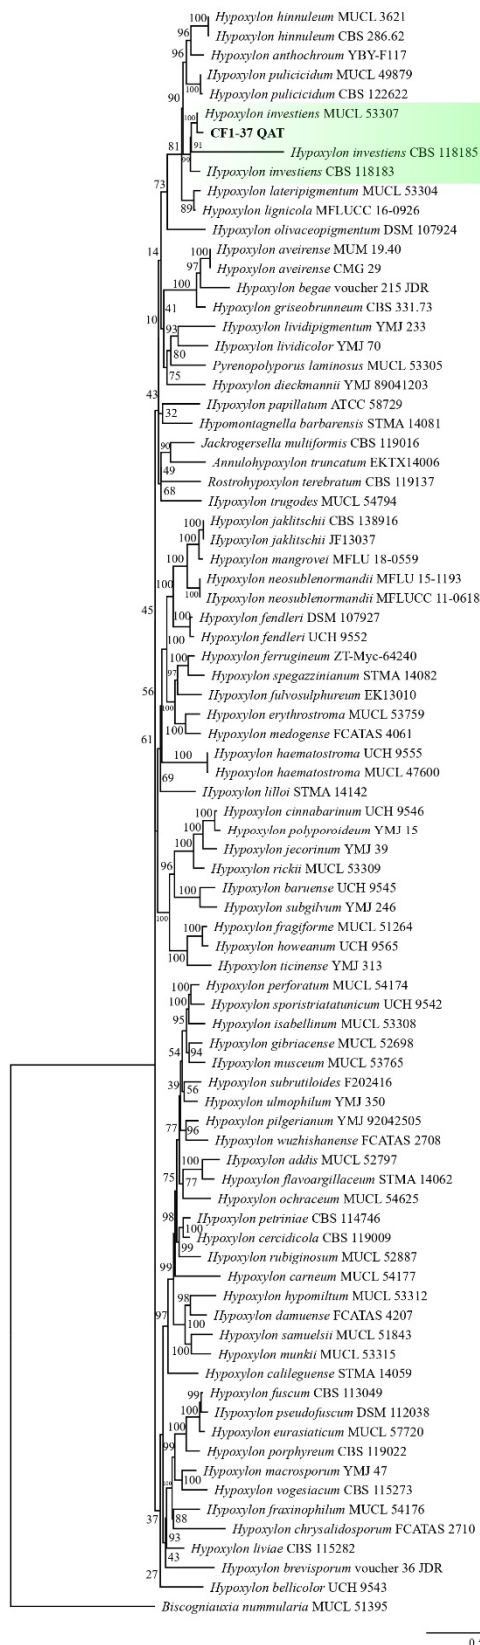

**Figure S3.** Concatenated phylogenetic analysis by Maximum Likelihood (ML) of the endophytic fungi CG1-2 and CG2-10, both isolated from branches of *Fridericia chica*, based on partial sequences of ITS, *tub2* and *tef1*. The scale bar of 0.03 represents the number of changes and the number indicates the bootstrap support of the branches. The sequences of the isolates studied here are highlighted in bold. The tree was rooted in *Aplosporella hesperidica* CBS 732.79.

**Figure S4.** Concatenated phylogenetic analysis by Maximum Likelihood (ML) of the endophytic fungi CG2-4 and CG2-12, both isolated from branches of *Fridericia chica*, based on partial sequences of ITS, *cal* and *tef1*. The scale bar of 0.07 represents the number of changes and the number indicates the bootstrap support of the branches. The sequences of the isolates studied here are highlighted in bold. The tree was rooted in *Diaporthella corylina* CBS 121124.

**Figure S5.** Concatenated phylogenetic analysis by Maximum Likelihood (ML) of the endophytic fungus CF3-5, isolated from the leaves of *Fridericia chica*, based on partial sequences of ITS and *rpb2*. The scale bar of 0.03 represents the number of changes and the number indicates the bootstrap support of the branches. The sequences of the isolates studied here are highlighted in bold. The tree was rooted in *Alternaria alternata* CBS 916.96.

**Figure S6.** Concatenated phylogenetic analysis by Maximum Likelihood (ML) of the endophytic fungus CF1-37, isolated from the leaves of *Fridericia chica*, based on partial sequences of ITS and *tub2*. The scale bar of 0.5 represents the number of changes and the number indicates the bootstrap support of the branches. The sequences of the isolates studied here are highlighted in bold. The tree was rooted in *Biscogniauxia nummularia* MUCL 51395.
