

Figure S1. ROC Curve of MS peaks of *Cryptococcus spp.* according to the criteria for biomarkers search.

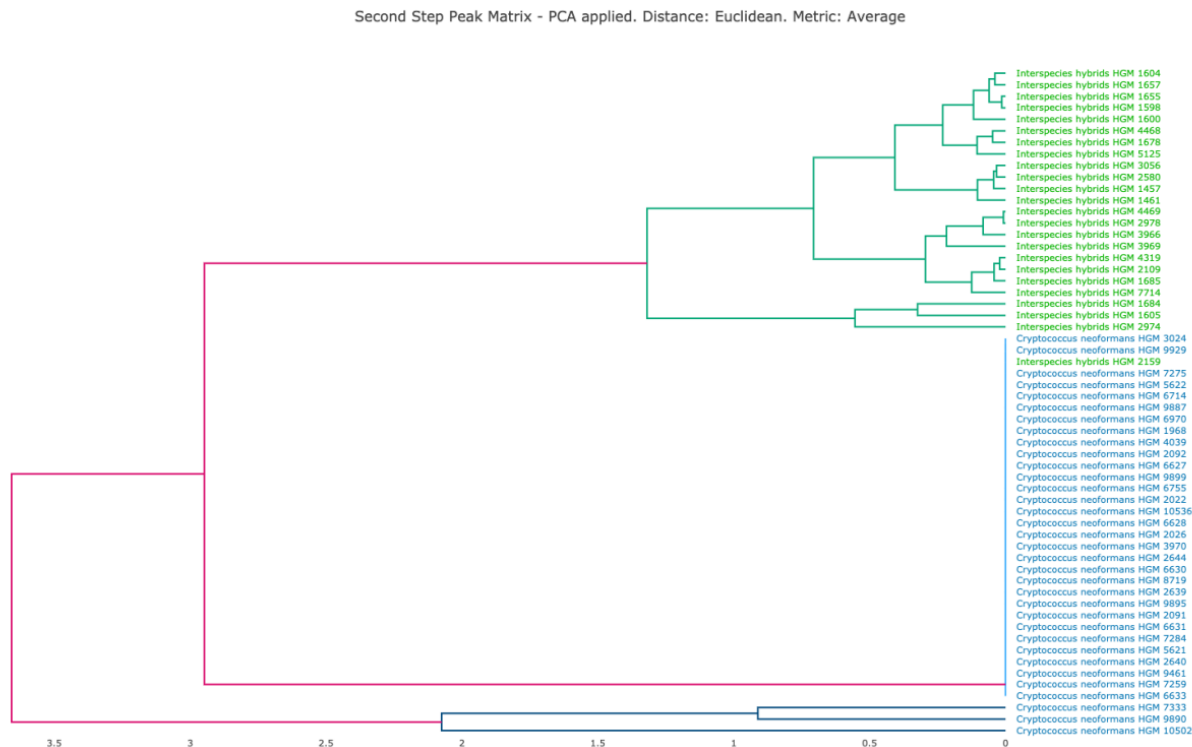

Figure S2. Discrimination between *C. neoformans* and the interspecies hybrids using the two-step classification method.

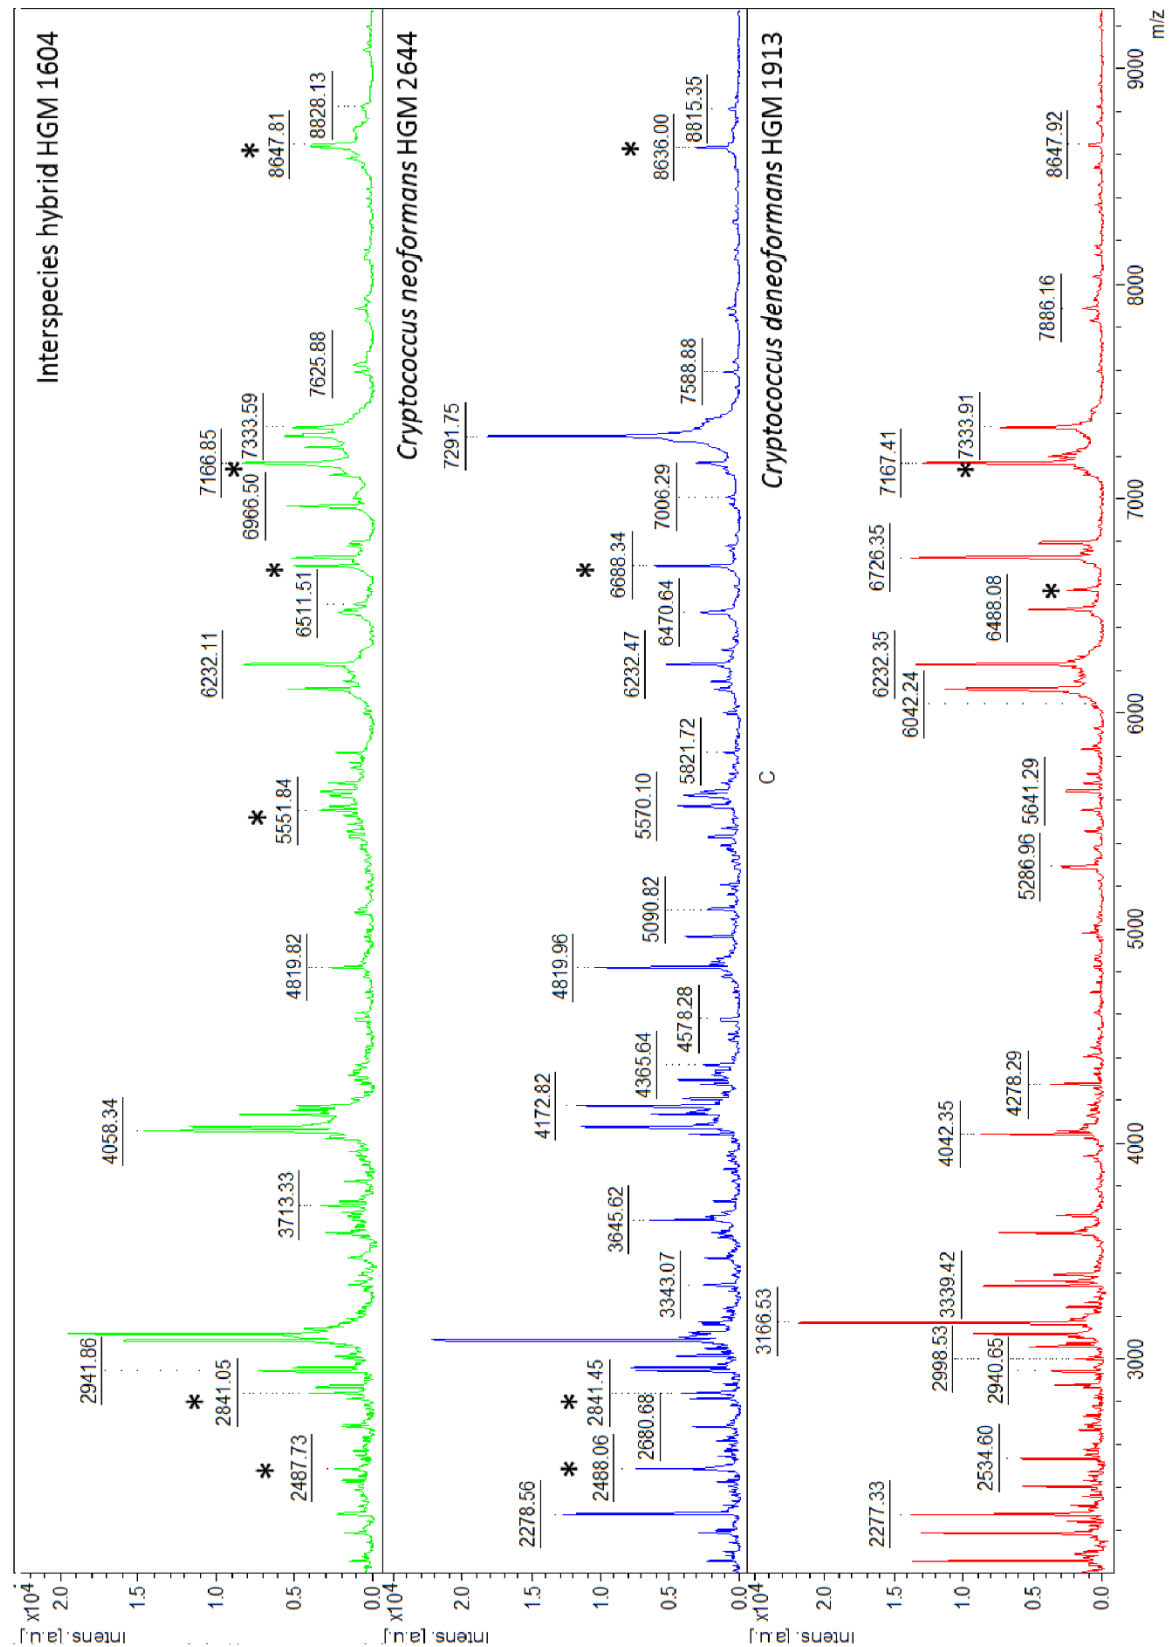

Figure S3. Representative protein spectra from the three *Cryptococcus* species analyzed in this study. Species-specific peaks with intensity above 500 arbitrary units (a. u.) are marked with asterisks (*). The complete list of species-specific peaks can be found in Table 2.
