

Supplementary Materials:

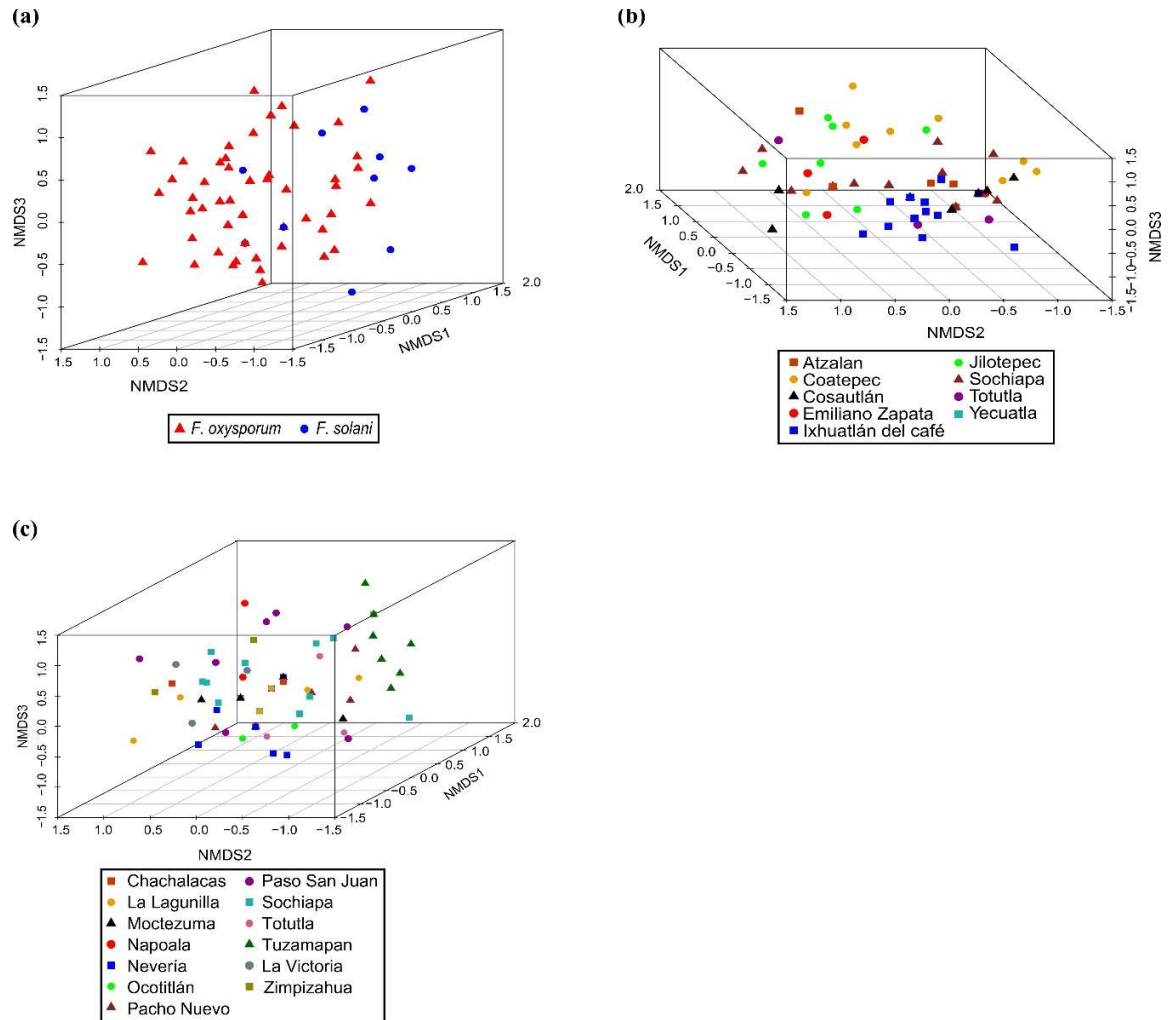

Figure S1. Three dimensional non-metric multidimensional scaling (3D-NMDS) ordination of the *Fusarium* isolates associated to coffee corky-root disease. 3D stress value = 0.10. 3D-NMDS plot annotated by: (a) species; (b) municipality; and (c) locality.

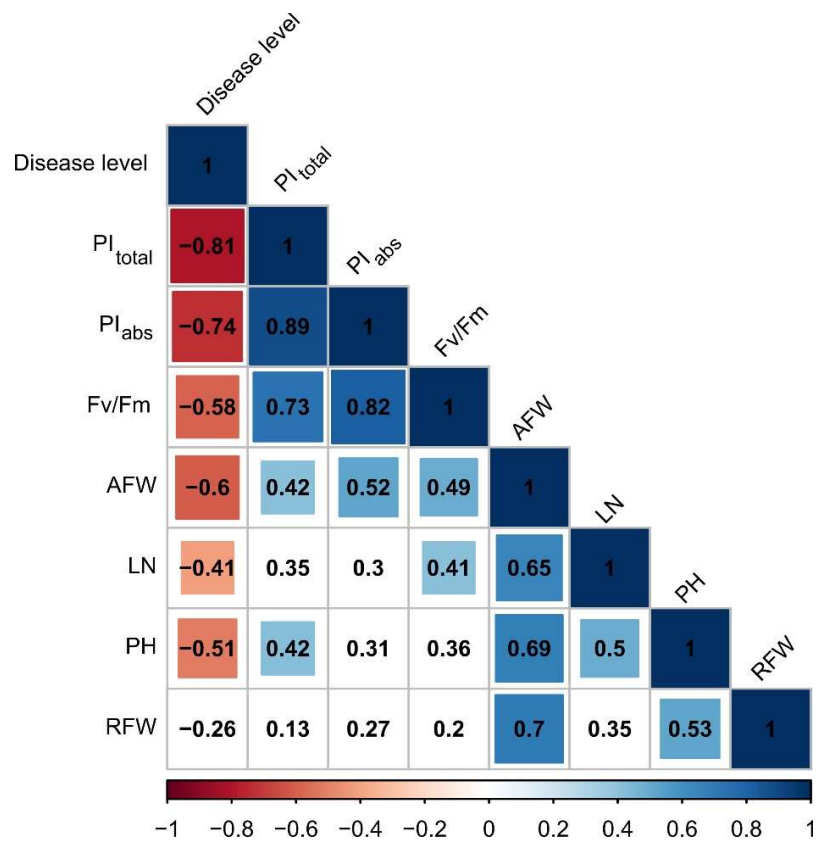

Figure S2. Spearman correlation plot between disease damage and physiological parameters of coffee seedlings. The Spearman correlation coefficients are depicted. Statistical significance: $P < 0.01$. White squares represent no significant correlations.
