

Supplementary materials

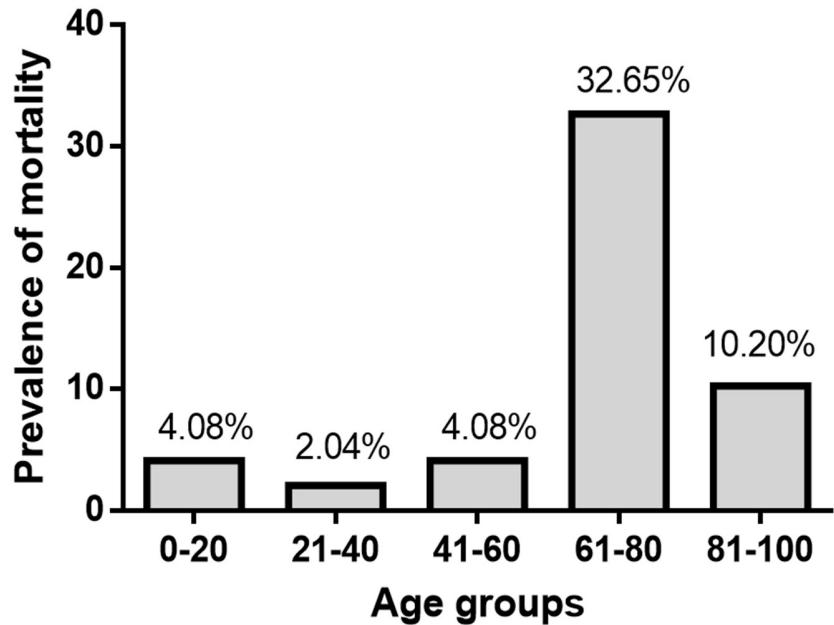

Figure S1. Mortality rate by age group among patients with candidemia.

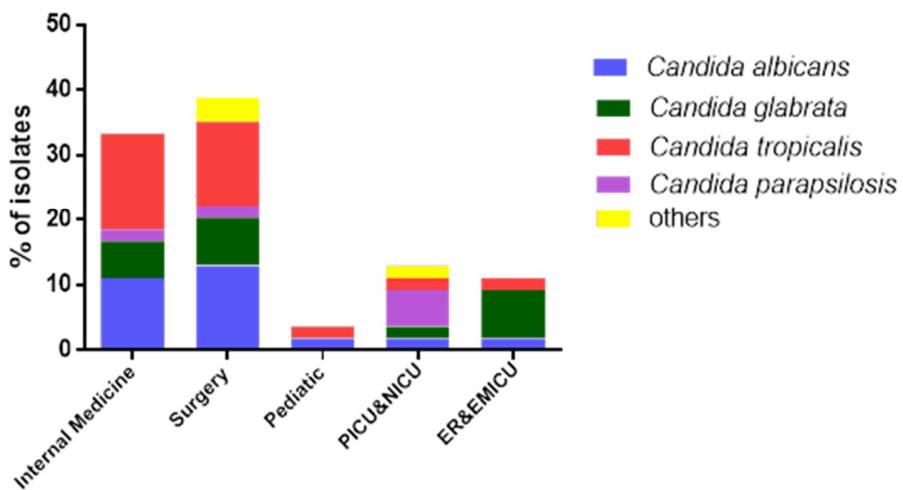

Figure S2. The composition of *Candida* species isolated from blood culture in different hospital units.

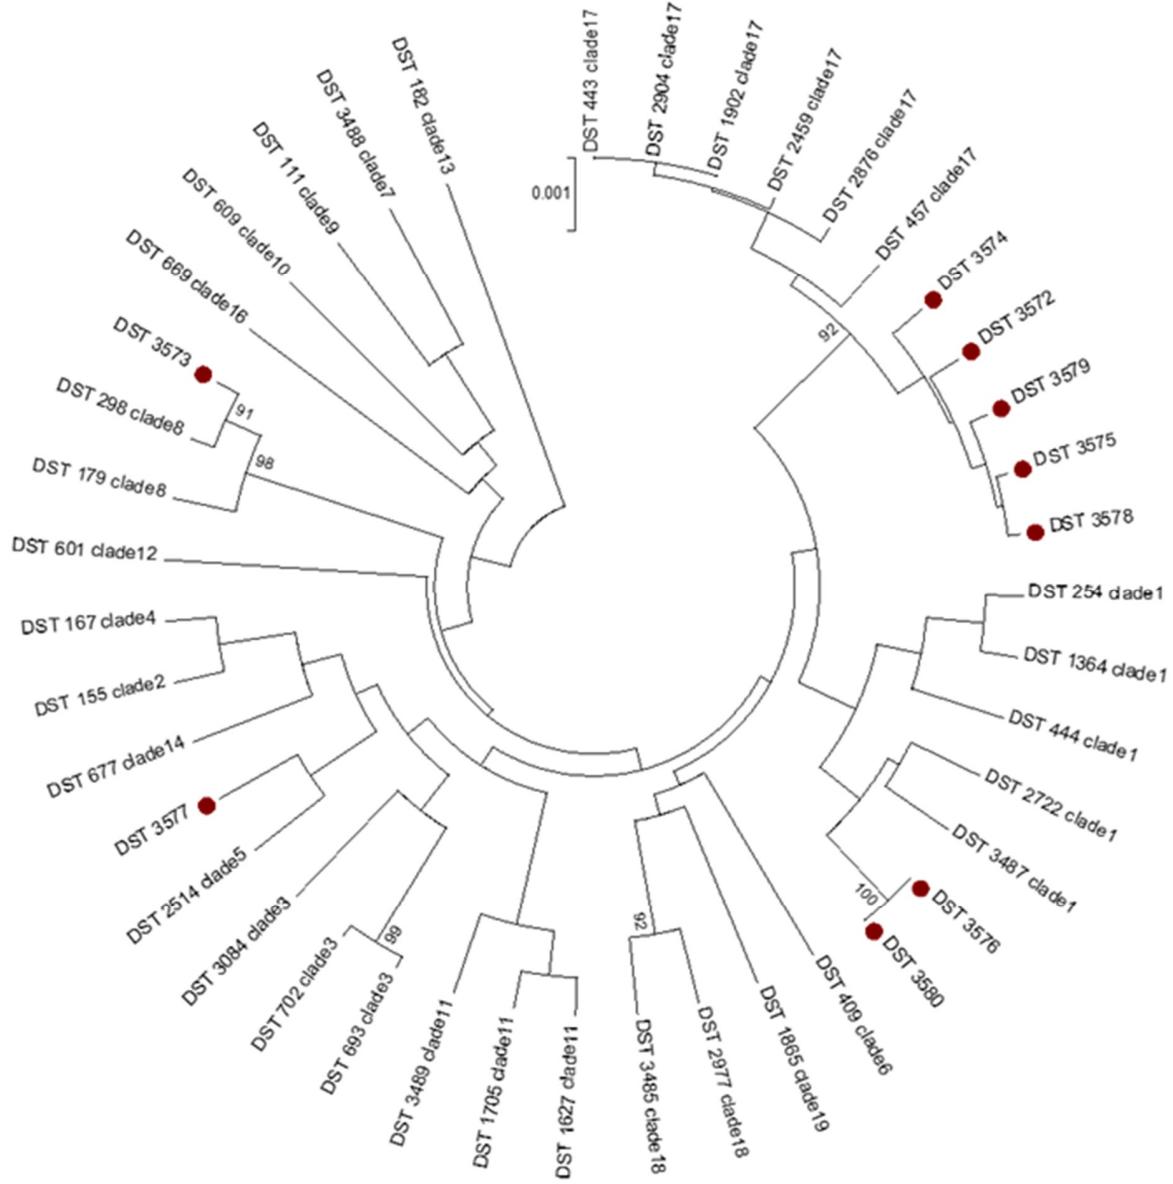

Figure S3. A phylogram was constructed via the unweighted pair group method with arithmetic mean based on the concatenated sequence of seven loci of *Candida albicans*. Clades were assigned by comparing the sequences obtained in this study to the reference sequences. Each sequence type in this study is represented as a brown dot.

Table S1. Primer sequence and PCR condition

Primer name	Primer Sequence (5' – 3')	Product size (bp)	Annealing temperature (°C)	Ref
