

Figure S4. Diagnostic normal Q-Q plots for the model of best fit for each fungicide, including (A) thymol [Treatment + Plate order + Plate date], (B) curcumin [Treatment * Plate order * Plate date], (C) 6-gingerol [Treatment * Plate order * Plate date], (D) Pond Pimafix® [Treatment * Plate order * Plate date], and (E) Virkon® Aquatic [Treatment * Plate order * Plate date]. Allicin was analyzed using a binomial distribution, therefore, normality diagnostics were unnecessary, thus no normality diagnostics were performed.
