

**Figure S1.** Generation and identification of *brlA* and *abaA* mutants in *M. robertsii*. (**A, B**) Schematic diagrams for the strategies of disruption *brlA* and *abaA* respectively. (**C, D**) The disruption mutants (DM) and complementation mutants (CM) of *brlA* and *abaA* identified via PCR analysis with paired primers (Table S1). The genomic DNA fragments detected by PCR include 2343 and 1753 bp from the *brlA* DM and the wild-type strain (WT) and 2343 and 1752 bp from *abaA* DM1–3 and WT respectively, leading to a partial promoter/coding fragment of *brlA* ( $1381 + 926 - 1708 = 599$  bp) or *abaA* ( $1752 + 926 - 2343 = 355$  bp) deleted from the WT DNA as illustrated in the diagram. (**E, F**) Relative transcript (RT) levels of *brlA* and *abaA* in the cDNA samples of their DM/CM strains with respect to the WT standard. The cDNA samples analyzed via qPCR were derived from three 4-day-old PDA cultures of each strain grown at the optimal regime. Error bars: standard deviations.
