

Table S1 Inoculation rate changes of *E. bromicola*-barley new symbionts. LZ: *E.bromicola* were not successfully inoculated into *Hordeum vulgare* cv. Yangsimai No. 1, LQ: *E.bromicola* were not successfully inoculated into *H. vulgare* var. nudum cv. Chaiqing No. 1. LZ+4 and LQ +4: Fourth generation of LZ and LQ inoculation with *Epichloë* that harvested in 2020.

| Association | Plant No. tested | Plant No. inoculation | Inoculation rate | Seed No. tested | seed No. inoculation | Inoculation rate |
|-------------|------------------|-----------------------|------------------|-----------------|----------------------|------------------|
| LZ | 20 | 0 | 0 | 50 | 0 | 0 |
| LZ+4 | 50 | 38 | 76 | 100 | 56 | 56 |
| LQ | 20 | 0 | 0 | 50 | 0 | 0 |
| LQ+4 | 50 | 34 | 68 | 100 | 47 | 47 |

Table S2 Rhizosphere soil properties associated with different kinds of barley under varieties (V) and endophyte (E) treatments, and results of two-way analysis of variance (two-way ANOVA) for the S and E on rhizosphere soil properties. E*V: interaction of *E. bromicola* and species. SOC:Organic Carbon, TP:Total Phosphorus, TN:Total nitrogen, C/N:The OC and TN ratio, C/P:the OC and TP ratio, N/P:The TN and TP ratio. * indicates $P < 0.05$.

| Varieties | Tretments | TN (g/kg) | TP (g/kg) | SOC (g/kg) | N/P (%) | C/N (%) | C/P (%) |
|-----------|-------------|--------------|-------------|--------------|-------------|-------------|--------------|
| LZ+4 | EI | 1.077±0.008 | 0.520±0.055 | 6.440±0.477 | 2.080±0.110 | 6.013±0.462 | 12.453±0.758 |
