Means with different superscripts (A, B, C) between sampling times differ significantly ( $P < 0.05$ ).

SEM: Standard error of the mean.

Effect: The dietary treatment (D), measurement time (T), and the interaction between dietary treatment x time (D x T).

A significance level below 0.05 indicates a significant difference.

**Table S3.** Body weight (BW) of the ewes of the three dietary treatments (CON, AC, and ACMAN) throughout the experimental period (start of the experiment (P), at lambing (L), and the end (E) of the experiment).
