

**SUPPLEMENTARY MATERIALS**

*Table S1: Polymorphisms detected in P3 (P. x cryptogea related Hybrid) during cloning assays with COXI, TUBULIN 5\_6 AND ITS.*

*A.1) COXI cloning types and percentage of each cloning type, comparison of variable nucleotide positions in the COXI cloning types using P.cryptogea MH136878.1 as a reference in the comparison map. B.1)  $\beta$ -tubulin cloning types and percentage of each cloning type (using BT 5 and 6 primers), comparison of variable nucleotide positions in the  $\beta$ -tubulin cloning types using P. cryptogea MH760166.1 as a reference in the comparison map. C.1) ITS cloning types and percentage of each cloning type, comparison of variable nucleotide positions in the ITS cloning types using P. cryptogea MH178331.1 as a reference in the comparison map.*

\* Type 4 (Tubulin 5\_6), almost identical to Type 1 (Tubulin 5\_6) but with polymorphism patterns shown to be closely related to *Phytophthora chamaehyphon*, the pattern is constant along the whole map to reference analysis
