

Homopolymers and ABC Triblock Copolymer Mixtures for Thermoresponsive gel Formulations

Anna P. Constantinou, Nikitas Provatakis, Qian Li and Theoni K. Georgiou*

Supplementary Information

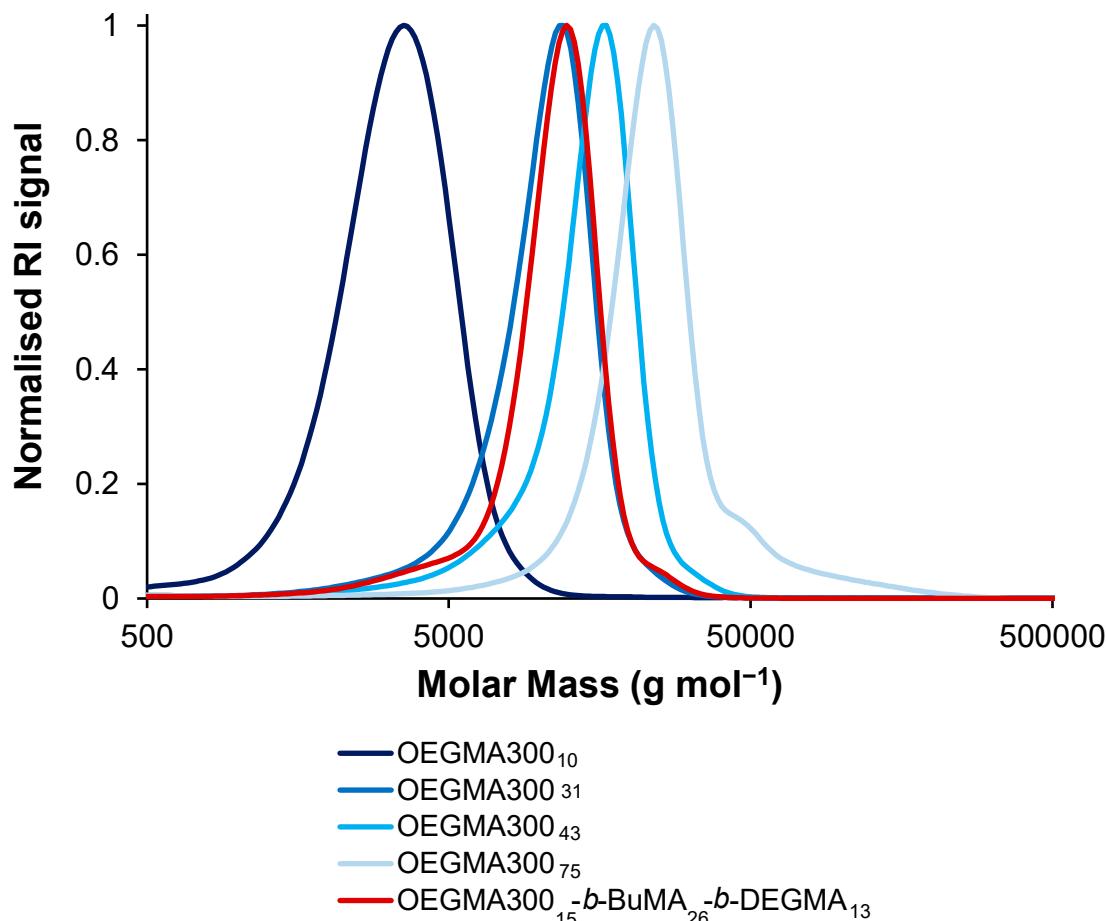

Figure S1. GPC traces of the final polymers after precipitation. OEGMA300 homopolymers of varying degrees of polymerisation are shown in blue: OEGMA300₁₀ in dark blue, OEGMA300₃₁ in blue, OEGMA300₄₃ in light blue, and OEGMA300₇₅ in faded blue. The triblock terpolymer is shown in dark red line.

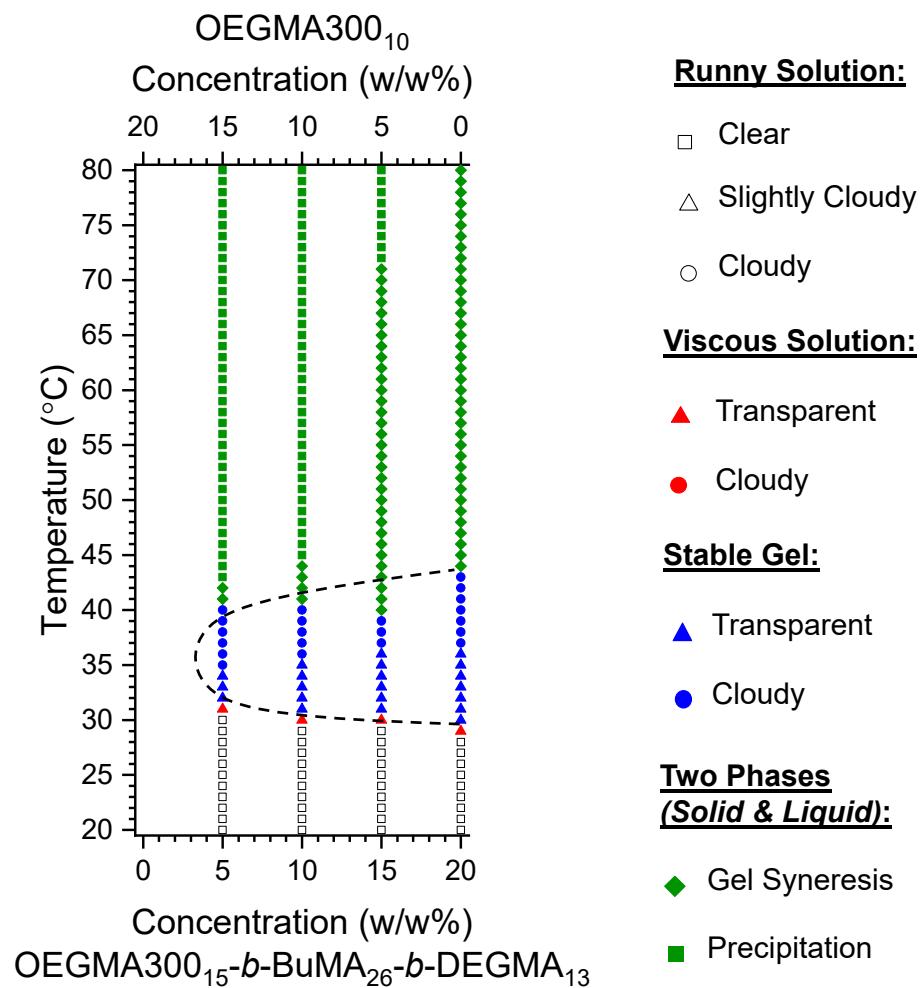

Figure S2. Phase diagram of the mixture of OEGMA₃₀₀₁₅-*b*-BuMA₂₆-*b*-DEGMA₁₃ with OEGMA₃₀₀₁₀ in phosphate buffered saline (PBS) with transitions showing up to 80 °C.

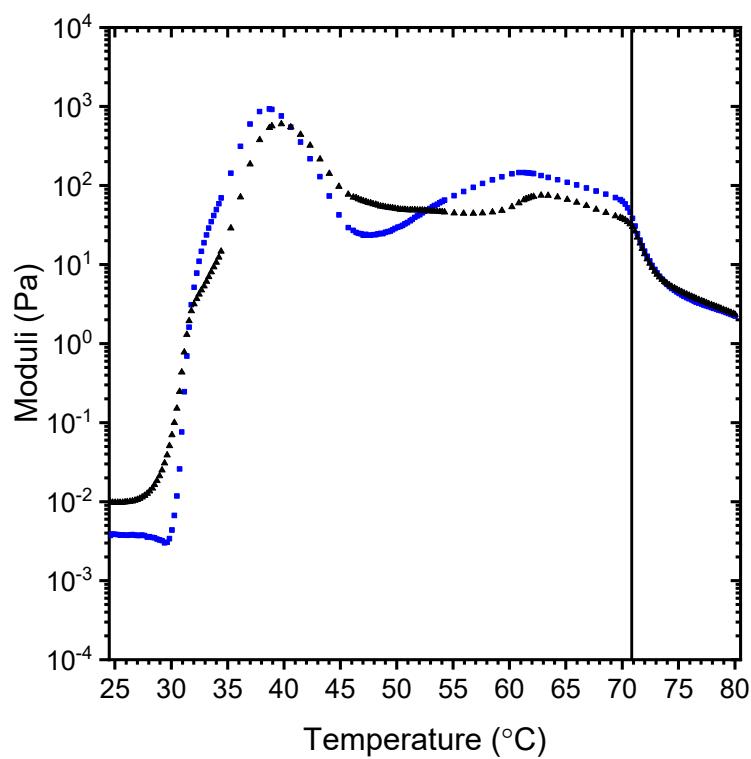

Figure S3. Temperature ramp rheological measurement on the mixture of OEGMA_{300₁₅}-*b*-BuMA₂₆-*b*-DEGMA₁₃ with OEGMA_{300₁₀} at a ratio of 3:1 in phosphate buffered saline (PBS) with transitions showing up to 80 °C: storage modulus in blue squares and loss modulus in black triangles.
