

Supplementary Material

Supplementary Figure S1. Neuropilin-1 protein expression is regulated by miR-24-3p. Neuropilin-1 protein levels were assessed by immunoblot in human brain microvascular endothelial cells (hBMECs) 48 hours after transfection with miR-24 mimic, miR-24 inhibitor, and miR-scramble (negative control). Representative immunoblots from four independent experiments are shown. Data are means \pm S.E.M. *:p<0.05.
