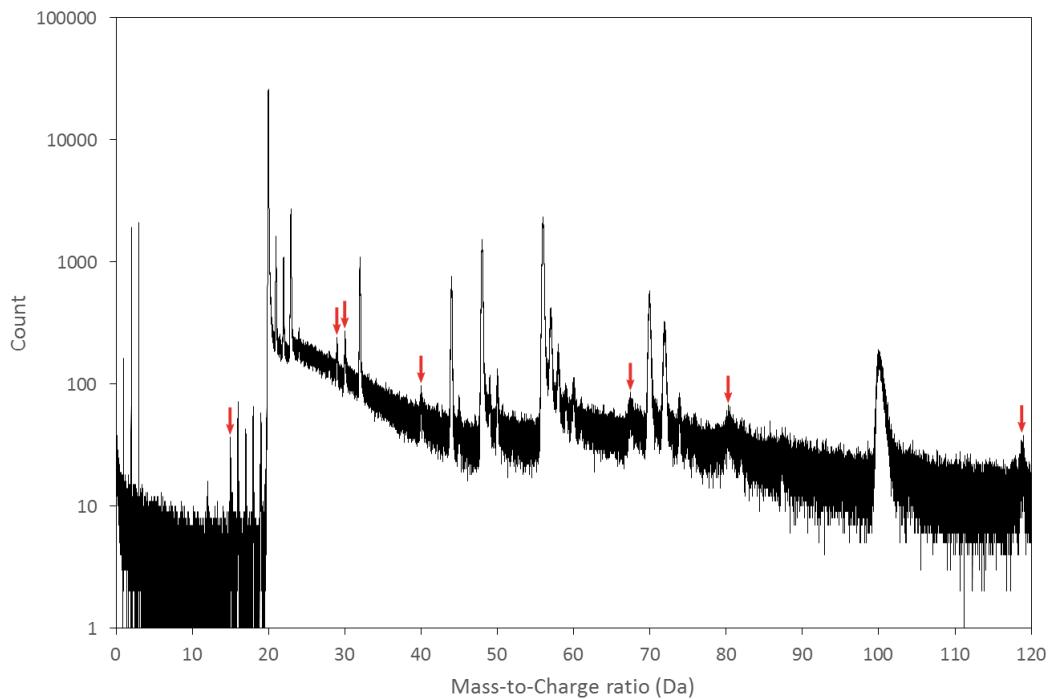

**Figure S1.** Example of representative APT mass spectra for calcite and chitin hydrogel. (Note: Red arrows indicate some representative peaks indicative of chitin; more details in Table 2).

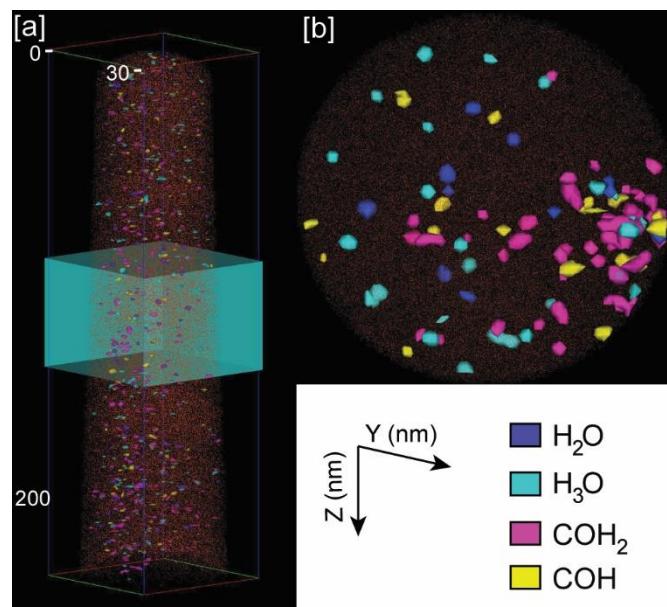

**Figure S2.** Example of representative APT mass spectra for calcite and chitin at 0.12 mg/mL concentration of yatalase.  
 (Note: **Red** and **blue** arrows indicate some representative peaks indicative of chitin and yatalase, respectively; more details in Table 2).

**Figure 3.** Example of representative APT mass spectra for calcite and chitin at 1.2 mg/mL concentration of yatalase. (Note: **Red** and **blue** arrows indicate some representative peaks indicative of chitin and yatalase, respectively; more details in Table 2).

**Figure 4.** Example of representative APT mass spectra for calcite and chitin nanofibers. (Note: Red arrows indicate some representative peaks indicative of chitin; more details in Table 2).

**Figure 5.** Example of APT 3D tip reconstruction for calcite with occluded chitin hydrogel fragments; (a) General view; (b) Orthogonal projection view (along Z axis) of a slice of the tip within the blue box in (a). Notes: Dimensions, along Z and Y axes, are in nm; red dots correspond to Ca atoms; chitin fragments recognized by  $\text{COH}^-$ ,  $\text{COH}_2^-$ , and associated water ( $\text{H}_2\text{O}$ ) and hydronium ( $\text{H}_3\text{O}$ ) molecules.

**Table S1.** Measured elemental atomic concentration (%) for all analyzed tips.
