

Supplementary Table S1. ELISA results for detection of PPV, PNRSV, and PDV in Bosnia and Herzegovina. Information on cultivars, number of samples collected, and numerical summary of infected samples and infection incidences are presented for each orchard. For clarity of data, only viruses that tested positive are presented.

Locality and orchard code	Cultivar	Number of samples	Infected samples (numerically)/ infection incidence (%)	Individual virus infection (numerically/ Infection incidence in %)			Total number of infected samples/ total infection incidence (%)
				PPV	PNRSV	PDV	
Orašac - 01	Požegača	31	14 45.16%	14 45.16%	0	0	14 45.16%
