

Supplementary Materials

Supplementary Figure S1. Total polyphenols and flavonoids content and antioxidant capacity of kale grown under different nutrient-solution depths. (A) DPPH = 2,2-diphenyl-1-picrylhydrazyl, (B) FRAP = ferric-reducing antioxidant power, (C) total phenolics, (D) total flavonoid. Different letters (a–c) marked upon the columns in the figure indicate significant differences between treatments by Duncan's multiple (p < 0.05), and vertical bars represent the standard margin of error.
