In the original publication [1], there was an issue concerning Figure 1 as published; the figure was intended only as a general illustrative visualization of the surveyed administrative/statistical areas and was not used as a methodological, analytical, cartographic, GIS-based, or statistical component of the study. To avoid any possible ambiguity or misunderstanding regarding the visual presentation of the study area and administrative/statistical boundaries, Figure 1 has been removed from the article.

The authors state that the scientific conclusions are unaffected. This correction was approved by the Academic Editor. The original publication has also been updated.
