

Table S1. Mean and cumulative soil NO₃-N mineralization over six incubation periods and five free-thaw cycles with overall mean for corn, flax, pea, forage radish, soybean, spring wheat, and winter wheat crop residues and cycle means showing significant differences for the Foreman soil series in North Dakota.

[†]Different letters within a column for each incubation cycle are significantly different at the 0.05 level using Tukey's HSD test.

[‡]Nitrogen mineralization mean over all incubation periods for each crop residue treatment.

[§]Nitrogen mineralization mean over all incubation periods including all crop residue treatments illustrating system changes over time.
