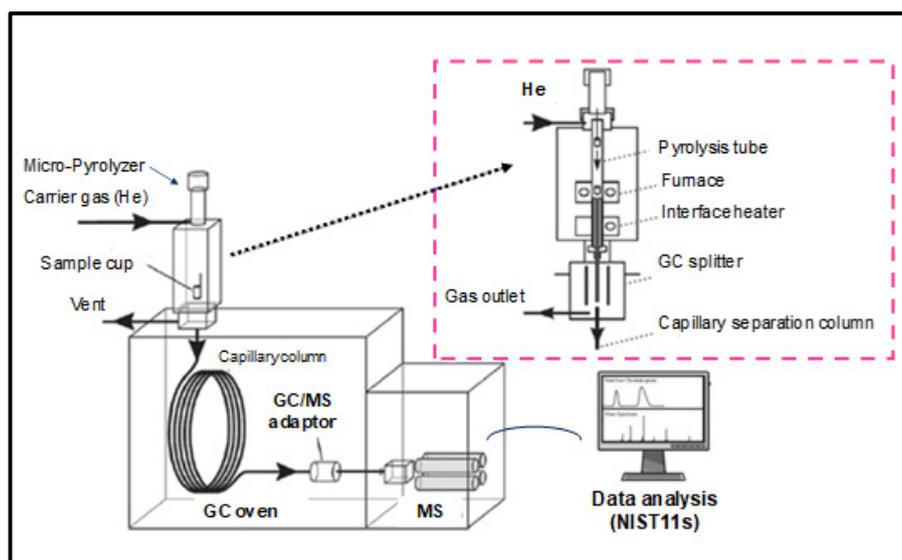

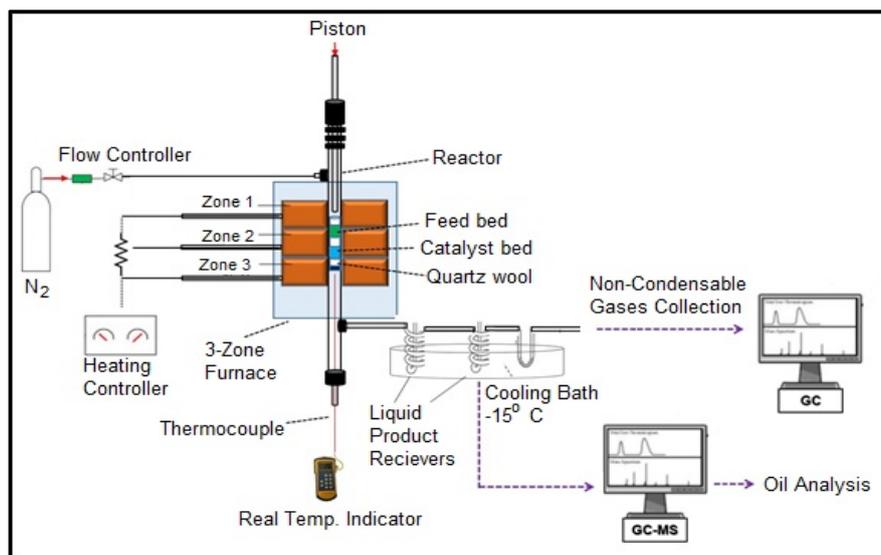

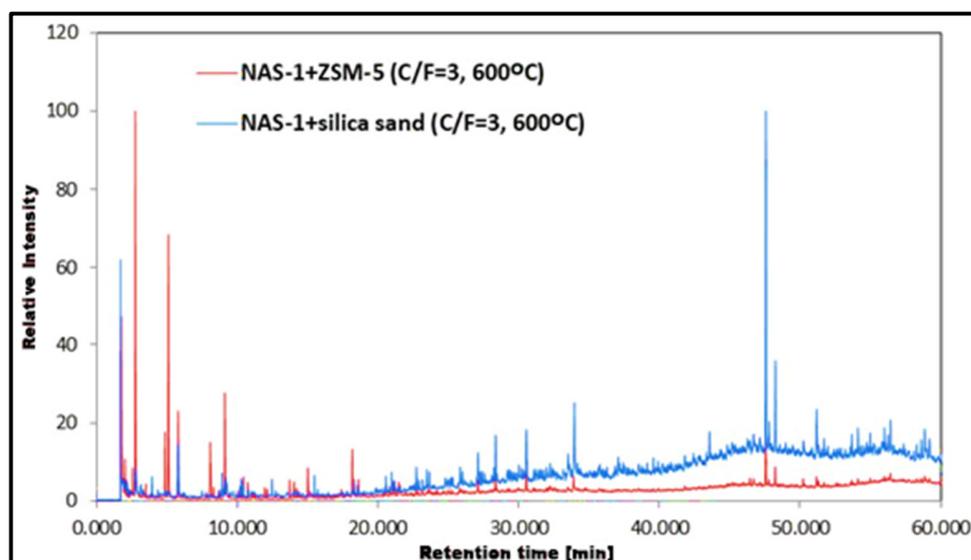

Figure S1. Schematic representation of the Py/GC-MS system.

**Figure S2.** Schematic representation of bench-scale fixed bed reactor for fast pyrolysis of solid wastes.

**Figure S3.** Representative Py/GC-MS spectra of the non-catalytic (thermal) and catalytic fast pyrolysis of NAS-1 at 600 °C.

**Table S1.** Waste materials physicochemical properties.

Waste material type	Water Content (% wt.)	Ash (% wt.) [on dry base]
Petroleum containing sludges (NAS-1)	44.5	73.6
Residual paint on scrap metals (NAS-2)	3.6	30.4
Creosote treated wood waste (NAS-3)	9	1.5

**Table S2.** Composition of the ash of the three waste feeds.

Composition (% elemental ratio)				Composition (% elemental ratio)			
	NAS-1	NAS-2	NAS-3		NAS-1	NAS-2	NAS-3
Na	1.4	2.3	3.2	S	1.3	0.6	16.4
Mg	4.9	-	6	K	2.2	3.3	5.7
Al	10.1	6.3	7.6	Ca	31.9	67.6	46.3
Si	28.7	13.6	9.6	Ti	0.9	6.3	-
P	1.2	-	-	Fe	17.6	-	5.2

**Table S3.** Elemental analysis of waste materials (normalized values<sup>(1)</sup>).

Waste	C (% w.t.)	H (% w.t.)	N (% w.t.)	S (% w.t.)	O (% w.t.)
NAS-1	57.85	5.08	1.35	4.23	31.50 <sup>(2)</sup>
NAS-2	69.80	8.86	0.14	0.65	21.12
NAS-3	51.14	5.73	0.96	5.69	36.49

(1) Normalized values ( $V_n$ ) have been estimated from the following equation considering the ash content (wt.%) of each solid waste:  $V_n = a \times [100 / ((100 - y))]$ , where  $a$  is the initial value from elemental analysis and  $y$  is the ash content (wt.%).

(2) The O content values for the petroleum sludge might be overestimated due to the very high content of ash (hydroxy-oxides).

**Table S4.** FT-IR peaks identification for the solid waste materials.

Wavenumber (cm <sup>-1</sup> )	Chemical bond type	Waste material
3622	O-H, alcohol or O-H humidity	NAS-1
3450	O-H, Alcohol	NAS-2
3325	O-H, Alcohol	NAS-3
3300	carboxylic acid	NAS-2
3050	Alcohol	NAS-3
2960	CH <sub>3</sub> , asym. stretching, alkane	NAS-2
2925	CH <sub>2</sub> , asym. stretching, alkane	NAS-1, NAS-3
2875	CH <sub>3</sub> , sym. stretching, alkane	NAS-2
2850	CH <sub>2</sub> sym. stretching, alkane or O-H alcohol intramolecular bonding	NAS-1, NAS-3
2510	S-H stretching thiol	NAS-1, NAS-2
2350	C=O from atmospheric CO <sub>2</sub>	NAS-2, NAS-3
1800	acid halide or C-H bending, aromatic compound	NAS-1
1730	C=O, stretching, aldehyde or ester	NAS-2
1660	C=C, stretching, alkenes	NAS-2
1600	C=O stretching, coniferyl/sinapyl aldehydes in lignin	NAS-3
1600	Aromatic C=C sym. stretching in lignin	NAS-3
1515	Aromatic C=C asym. stretching in lignin	NAS-3
1450	CH <sub>2</sub> , bending, alkane	NAS-2, NAS-3
1450	Asymmetric C-H deformation, lignin	NAS-3
1425	CH <sub>2</sub> +CH <sub>3</sub> bending, alkane	NAS-1
1380	Sulfate	NAS-3
1275	C-O stretching in (aromatic) esters	NAS-2, NAS-3
1150	C-O, stretching, ether or alcohol	NAS-2
1065	primary alcohol	NAS-2
1025	C-O-C stretching of primary alcohol in cellulose and hemicellulose	NAS-3
1025	Si-O-Si stretching, clays	NAS-1
875	C-H bending, 1,2,4 trisubstituted	NAS-1, NAS-2

	CaCO <sub>3</sub>	NAS-2
800	C-H bending, 1,2,3,4 tetrasubstituted	NAS-1
750	monosubstituted	NAS-3
715	C-H bending, aromatic	NAS-2

**Table S5.** Composition of bio-oil derived from non-catalytic fast pyrolysis of petroleum sludge (NAS-1) in the Py/GC-MS system, at 600°C (GC-MS peak area, %).
