† Presented at the 2nd International Conference on Engineering, Technology, and Applied Science Innovations (ICETASI 2026), Zakynthos, Greece, 24–26 September 2026.

In submitting conference proceedings to *Engineering Proceedings*, the Volume Editors of the proceedings would like to certify to the publisher that all papers published in this volume have been subjected to peer review by the designated expert referees and were administered by the Volume Editors strictly following the policies announced on the conference website [1].

The whole process was supervised by the conference committee and the Volume Editors and adhered to the professional and scientific standards expected of a proceedings journal published by MDPI and complied with the peer review policy and guidelines of *Proceedings*, which can be found at the following link: https://www.mdpi.com/journal/engproc/instruction_for_conference_organizers. The review reports were checked and archived by the Editorial Office of *Engineering Proceedings*.

- Type of peer review: single-blind
- Conference submission management system:
    - Submission via email or through a form in the website (https://icetasi.com/conference/submission/) (accessed on 1 October 2026). All further communications were conducted via email.
    - First screening from the editors (identification and rejection of duplicates, extremely bad English, or irrelevant subjects).
    - Assignments to committee members for reviewing. At least four reviewers were assigned to each paper and were given a certain timeframe to submit their review. The number of responses (i.e., reviews) in each round ranged from zero to four. If no responses were acquired, the editors assigned it to other committee members or reviewed the paper themselves according to their expertise.
    - All timely responses were considered. For contradicting reviews, the majority won, or another reviewer (in case of a tie) was assigned or the editors reviewed the paper and the reviews themselves. If only one review was collected: if it was positive the editors reviewed the paper and decided, if it was negative, the paper was rejected.
    - Submitted abstracts were considered submissions to the conference and preliminary stages of full papers, but only full papers were reviewed (if submitted).
    - The final versions were approved by the corresponding authors. The authors were allowed to propose small, specific changes (i.e., typos) to the final papers

- Number of submissions received: 69
- Number of submissions sent for review: 59
- Number of submissions accepted: 32
- Acceptance rate (number of submissions accepted/number of submissions received): 32/69 = 46%
- Average number of reviews per paper: 2.84
- Total number of reviewers involved: 38

The Conference Committee extends our heartfelt thanks to the dedicated reviewers (members of the Scientific and Technical Committees—https://icetasi.com/committee/) whose expertise and commitment have been key to the ICETASI 2026 conference's success.

Conflicts of Interest: The authors declare no conflict of interest.
