

Weekly ED attendance by triage class – Non-fever visits

The number of visits across all 'Non-Fever' triage groups (P1-P4) declined during the COVID-19 period as compared to corresponding pre-COVID-19 period. The proportion of P3 visits dropped significantly over the COVID-19 period, reaching its lowest numbers during the Circuit Breaker phase. Epi-weeks were used for plotting and only completed epi-weeks 2 to 26 of each studied period were included in this figure.

Figure S1. Weekly ED attendance trend for each 'Non-Fever' triage group during the pre-COVID-19 and COVID-19 periods.
