

Additional File S3. Matrix of the number of peaks per sample, the number of peak intersections between pairwise comparisons and the Jaccard similarity score between pairwise comparisons for butyrate (BT) and control (CT) samples. The top of the diagonal (light red) is the number of peak intersections between pairwise comparisons. The yellow diagonal line is the number of peaks per sample. The bottom of the diagonal (green) is the Jaccard score between pairwise comparisons. Each condition has two biological replicates.

Condition	BT1	BT2	CT1	CT2
BT1	118,521	95908	84039	98204
BT2	0.6458	113,935	83315	96931
CT1	0.5565	0.5623	102,063	98678
CT2	0.5784	0.5745	0.6428	135,755
