Table S1. Summary description of the eleven land cover categories.

1.Woodland	The dominant trees are oaks (<i>Quercus pubescens</i>), chestnuts (<i>Castanea sativa</i>), and black locusts (<i>Robinia pseudoacacia</i>).
2.Shrubland	The dominant shrubs are brambles (<i>Rubus spp.</i>), blackthorns (<i>Prunus spinosa</i>), tree heath (<i>Erica arborea</i>), and elderberry (<i>Sambucus nigra</i>).
3.Uncultivated area	Fields abandoned for varying lengths of time, with vegetation largely influenced by surface aspect and soil moisture. In general, a vigorous secondary succession takes place, dominated by weeds such as mugwort (<i>Artemisia spp.</i>).
4.Cultivated area	This land use covers a small portion of the area and is primarily used for potato crops, corn, and grasses grown for summer hay harvesting. These areas are often associated with olive orchards.
5.Bamboo grove	These allochthonous plants are present in several parts of the study area and are the result of past plantations when they were used as vineyard poles. They are currently expanding rapidly, enlarging the original clusters.
6.Olive orchard	They are represented by rows of trees planted about 4 meters apart, either in parallel rows or single rows. The age of the olive groves varies greatly, partly due to the frost of 1985 (Twardosz et al., 2016), which killed most of the tree's aerial parts. Olive trees are also common plants in gardens.
7.Vineyard	They occupy a modest portion of the territory. In the past, they were widespread, but today, due to abandonment, only residual vineyards remain.

8.Edgerows	We assigned the category of edge rows to the edges of woodlots of <i>Quercus pubescens</i> , <i>Castanea sativa</i> , <i>Robinia pseudoacacia</i> , or tree lines along roads and field margins. <i>Quercus ilex</i> , <i>Populus alba</i> , and <i>Platanus orientalis</i> are growing along roadsides and in both public and private gardens.
9.Buildings	The "Buildings" category includes all structures classified by the municipal technical map, whether used for residential purposes, various productive activities, or abandoned buildings.
10.Roads	"Roads" represent all streets as indicated on the municipal technical map, including squares and any areas covered by asphalt or concrete.
11.Other	Every surface outside the above categories, generally the areas surrounding buildings, beyond the perimeter defined by the municipal technical map.

Table S2. Maximum, minimum, and mean elevation above sea level (a.s.l.) for each Recording Station (RS). The slope is expressed in degrees. The variability in slope orientation ranges from 4 to 2. The "#" represents the order in which the RS were included in the entanglement analysis, as shown in Figure 8.
