

Supplementary Material

Screening of Functional Compounds in Supercritical Carbon Dioxide Extracts from Perennial Herbaceous Crops

Mateusz Ostolski, Marek Adamczak, Bartosz Brzozowski, Mariusz Jerzy Stolarski

Table S1. The results of ANOVA ($p < 0.05$) for the influence of substrate, extraction conditions and harvest time (A) June, (B) October, (C) February on total polyphenol concentration (TPC).

Effect	Sum of square	Degrees of freedom	Mean square	F-value	p-value
Substrate	18142.55	6	3023.76	3744.89	0.000
Harvest time	16383.54	2	8191.77	10145.41	0.000
Extraction conditions	36308.34	1	36308.34	44967.46	0.000
Substrate*Harvest time	19779.70	12	1648.31	2041.41	0.000
Substrate*Extraction conditions	17481.63	6	2913.61	3608.47	0.000
Harvest time*Extraction conditions	6663.53	2	3331.76	4126.35	0.000
Substrate* Harvest time*Extraction conditions	15900.62	12	1325.05	1641.06	0.000
Error	67.82	84	0.81		

Table S2. The results of ANOVA ($p < 0.05$) for the influence of substrate, extraction conditions and harvest time (A) June, (B) October, (C) February on total flavonoid concentration (TFC)

Effect	Sum of square	Degrees of freedom	Mean square	F-value	p-value
Substrate	58.02	6	9.67	1903.73	0.000
Harvest time	25.37	2	12.69	2497.61	0.000
Extraction conditions	19.22	1	19.22	3783.79	0.000
Substrate*Harvest time	173.59	12	14.47	2848.02	0.000
Substrate*Extraction conditions	44.97	6	7.49	1475.45	0.000
Harvest time*Extraction conditions	155.17	2	77.59	15274.88	0.000
Substrate* Harvest time*Extraction conditions	137.58	12	11.47	2257.19	0.000
Error	0.43	84	0.01		

Table S3. The results of ANOVA ($p < 0.05$) for the influence of substrate, extraction conditions and harvest time (A) June, (B) October, (C) February on antioxidant activity (DPPH assay)

Effect	Sum of square	Degrees of freedom	Mean square	F-value	p-value
Substrate	1393393.48	6	232232.25	6331.03	0.000
Harvest time	4166187.31	2	2083093.65	56788.49	0.000
Extraction conditions	6122738.64	1	6122738.64	166915.73	0.000
Substrate*Harvest time	746698.35	12	62224.86	1696.35	0.000
Substrate*Extraction conditions	930044.08	6	155007.35	4225.75	0.000
Harvest time*Extraction conditions	3069623.93	2	1534811.97	41841.45	0.000
Substrate* Harvest time*Extraction conditions	615489.43	12	51290.79	1398.27	0.000
Error	3081.26	84	36.68		

Table S4. Wavenumbers of QATR-FTIR peaks of supercritical plant extracts (scCO₂ and scCO₂/H₂O) harvested in June

Group	Wavenumbers (cm ⁻¹)													
	<i>H. salicifolius</i>		<i>S. perfoliatum</i>		<i>H. tuberosus</i>		<i>M. × giganteus</i>		<i>M. sinensis</i>		<i>M. sacchariflorus</i>		<i>S. pectinata</i>

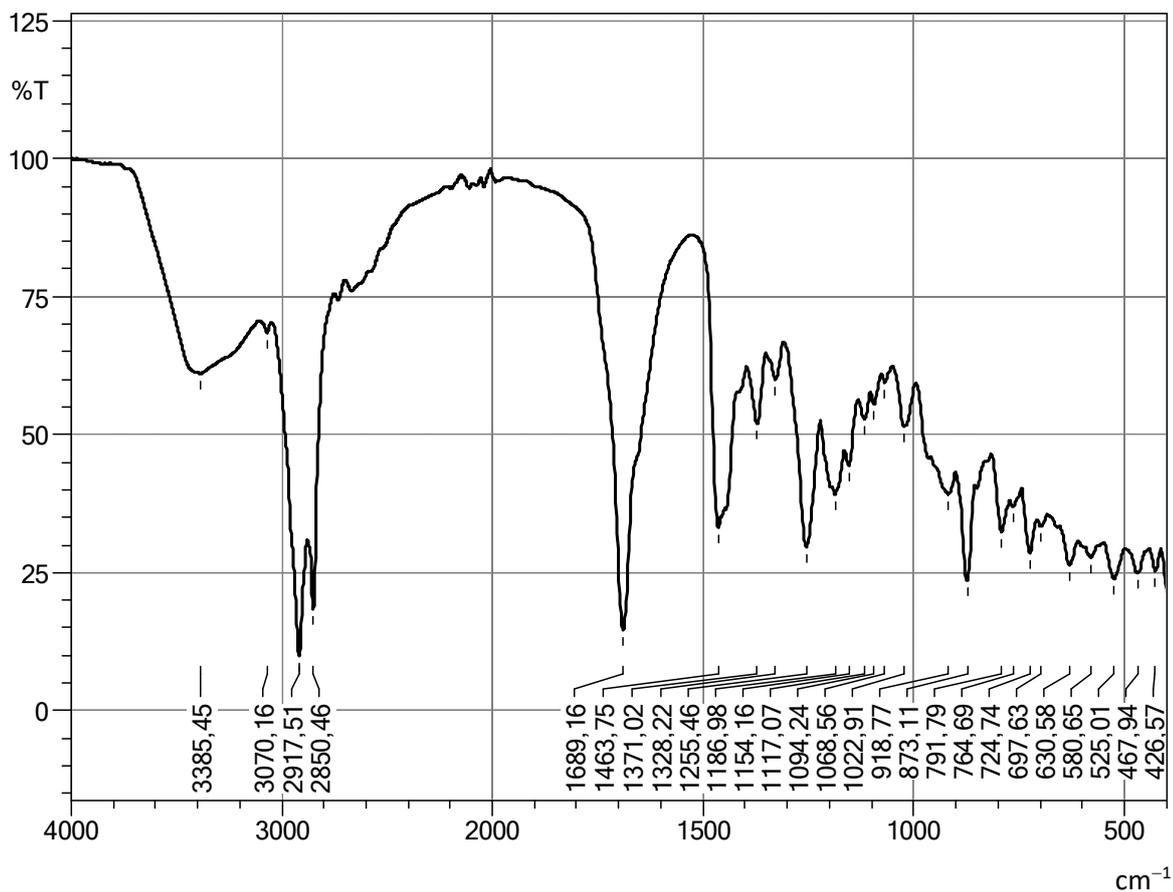

Figure S1. QATR-FTIR spectrum of the scCO₂ extract from *H. salicifolius* harvested in June.

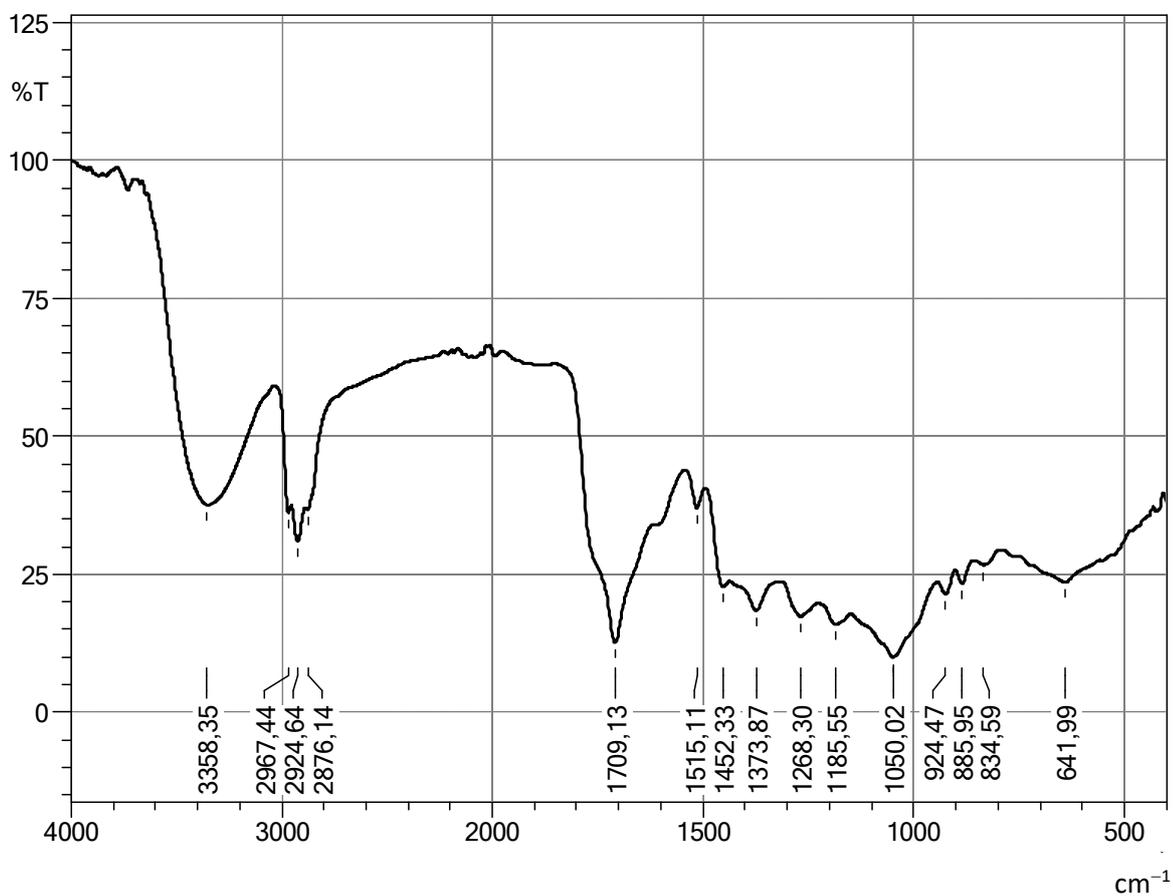

Figure S2. QATR-FTIR spectrum of the scCO₂/H₂O extract from *H. salicifolius* harvested in June.

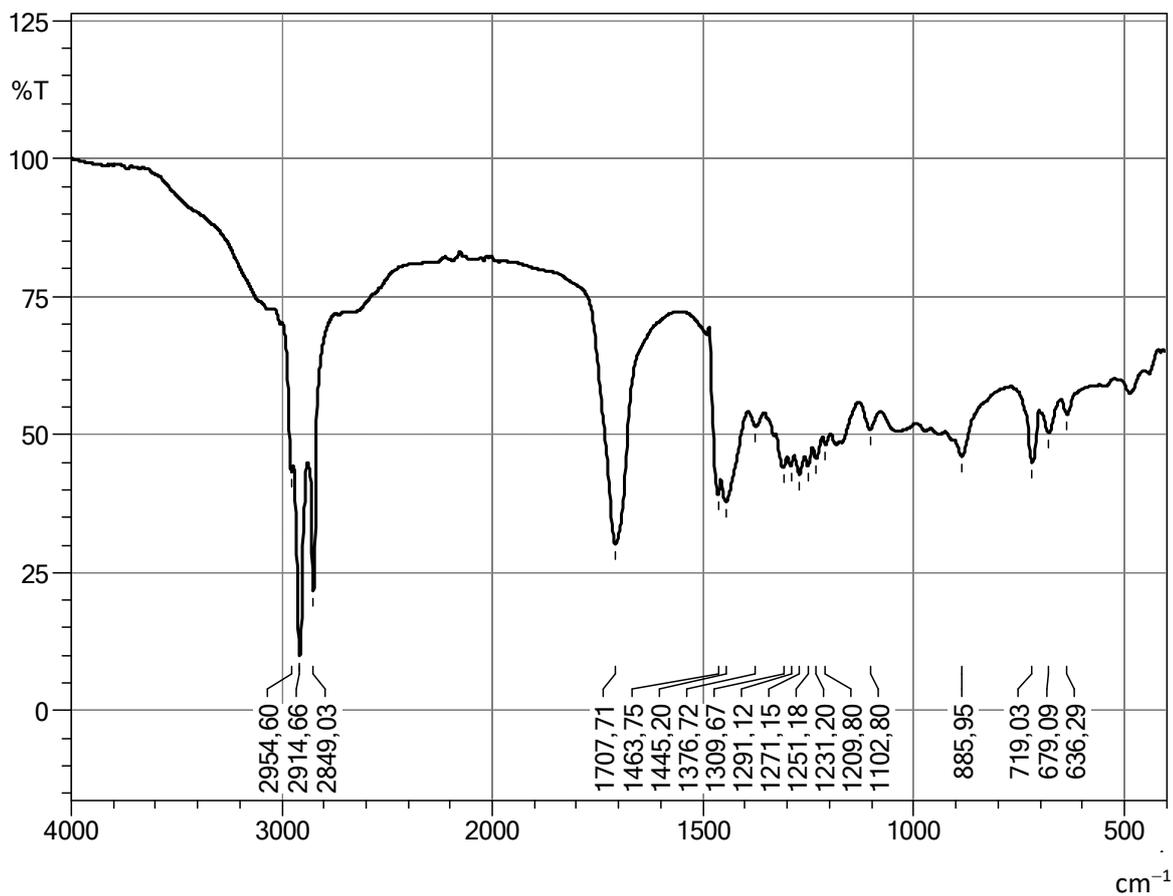

Figure S3. QATR-FTIR spectrum of the scCO₂ extract from *S. perfoliatum* harvested in June.

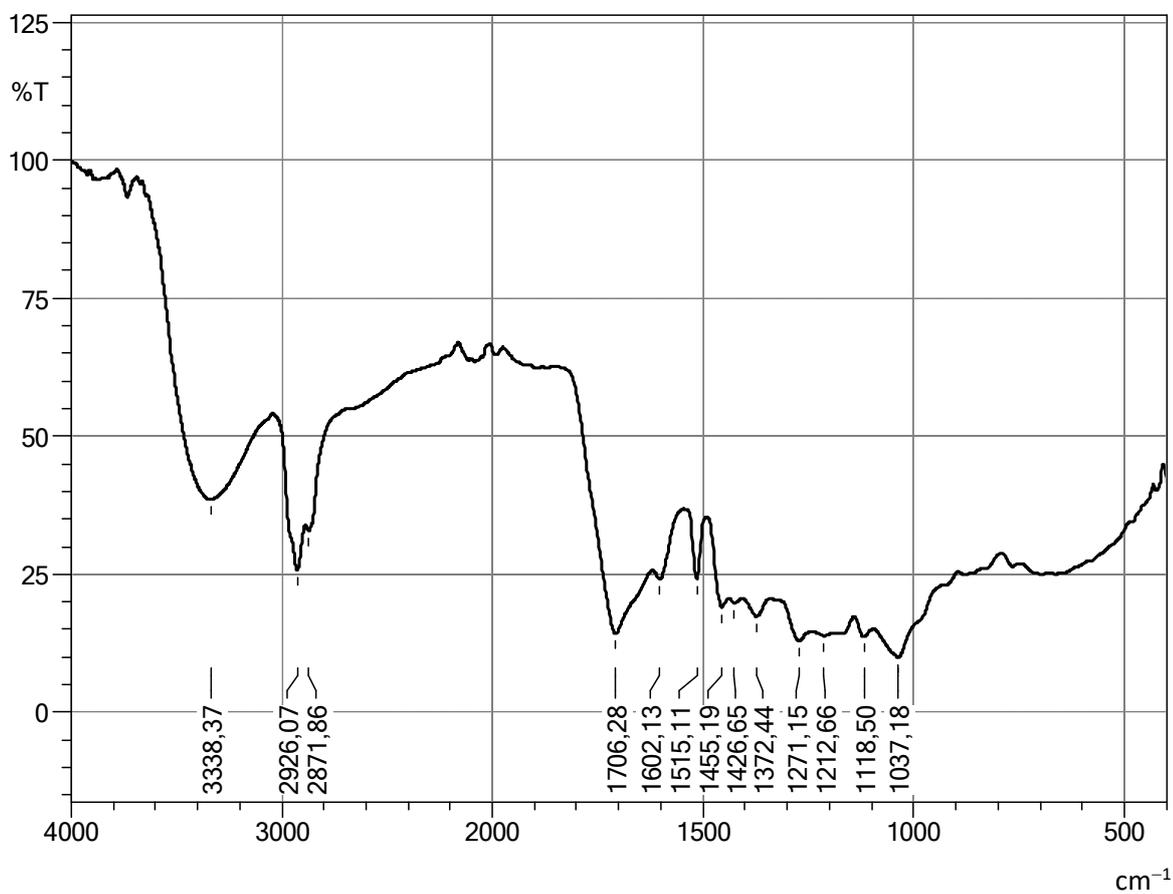

Figure S4. QATR-FTIR spectrum of the scCO₂/H₂O extract from *S. perfoliatum* harvested in June.

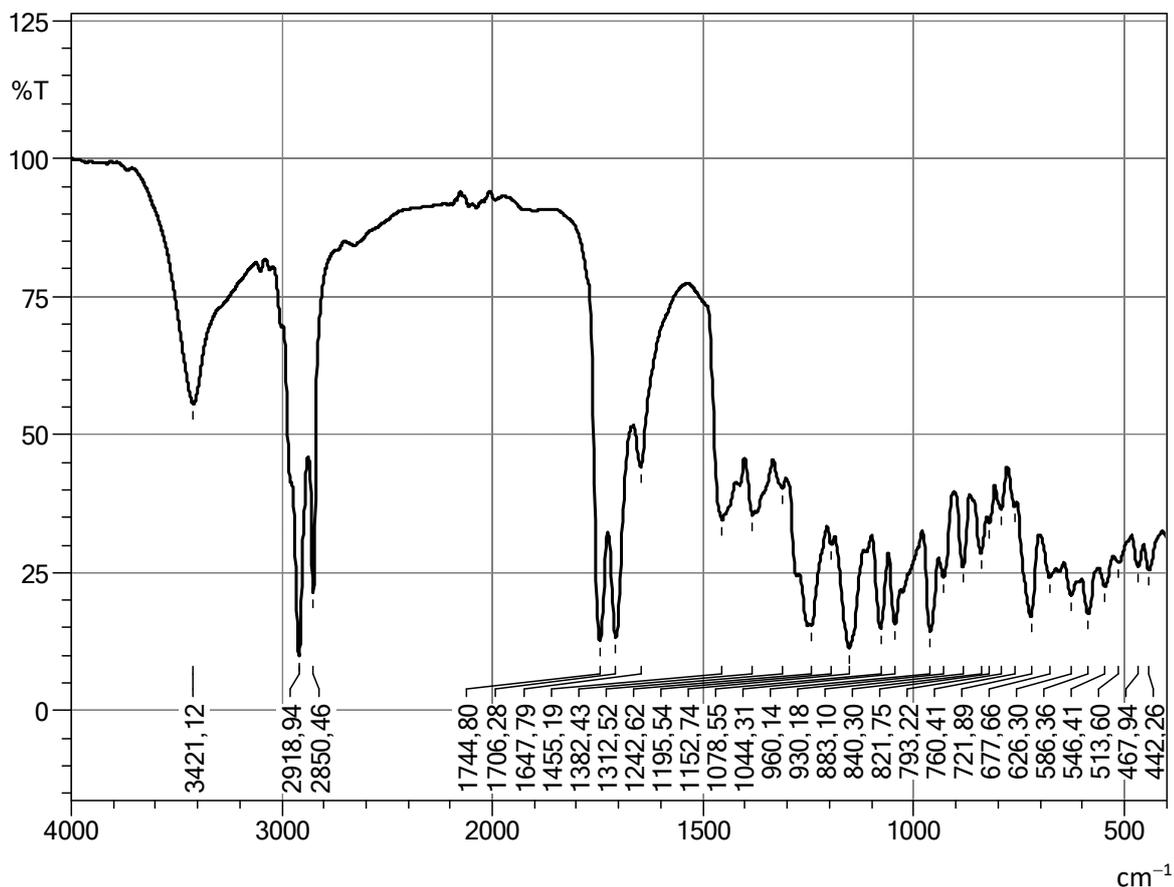

Figure S5. QATR-FTIR spectrum of the scCO_2 extract from *H. tuberosus* harvested in June.

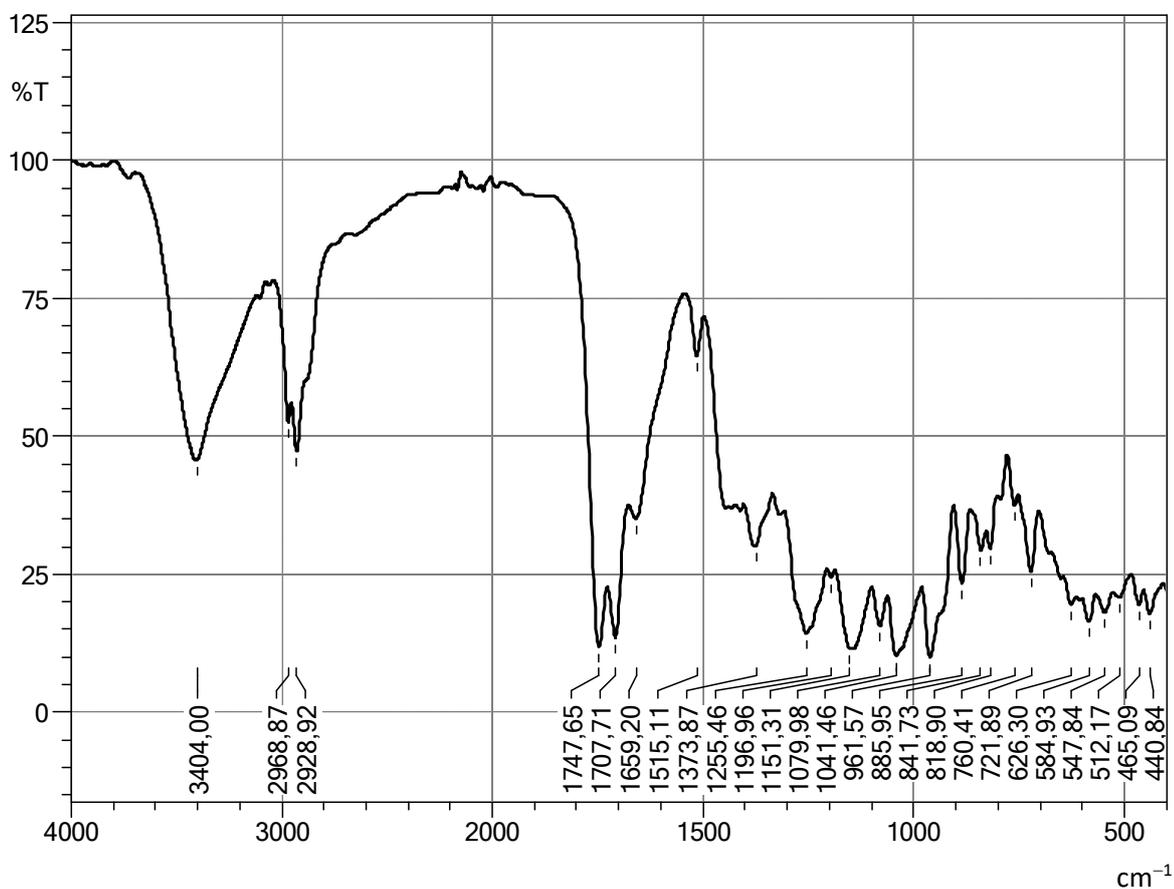

Figure S6. QATR-FTIR spectrum of the $\text{scCO}_2/\text{H}_2\text{O}$ extract from *H. tuberosus* harvested in June.

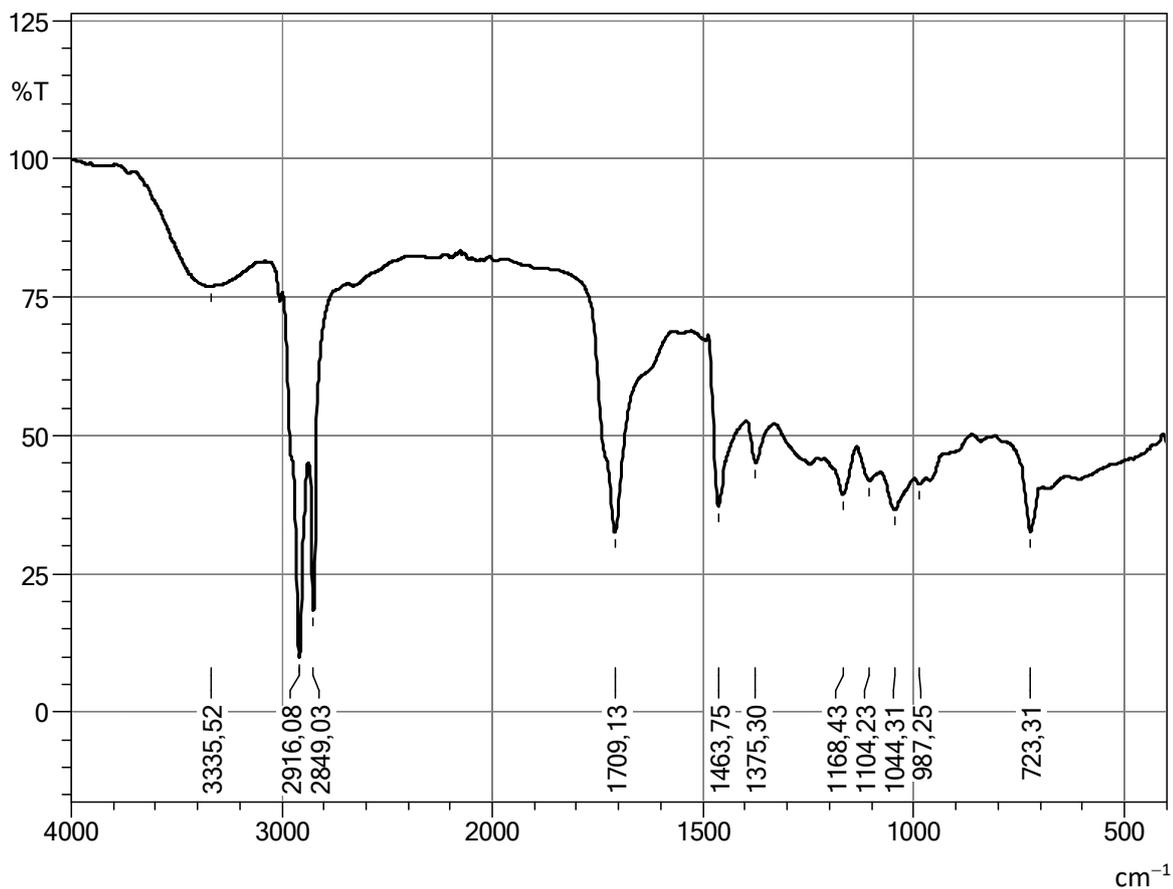

Figure S7. QATR- FTIR spectrum of the scCO₂ extract from *M. × giganteus* harvested in June.

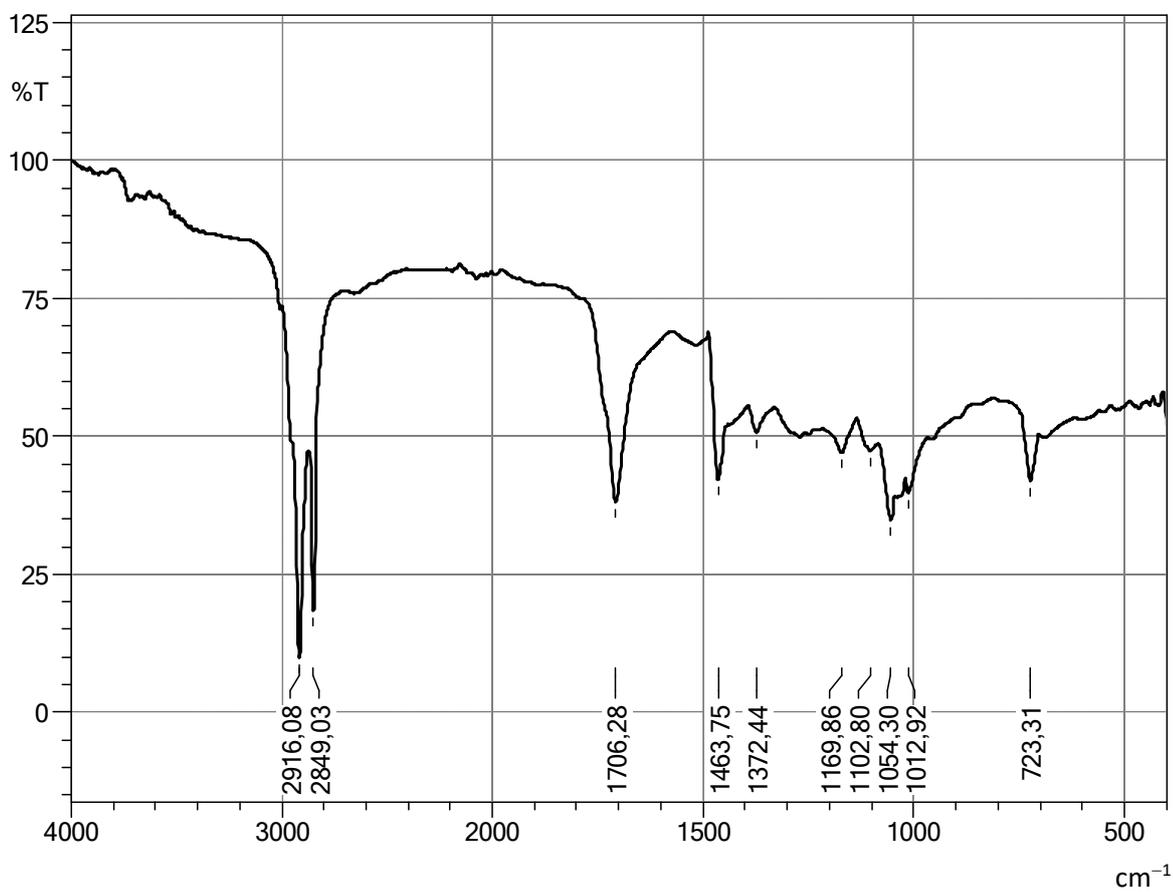

Figure S8. QATR-FTIR spectrum of the scCO₂/H₂O extract from *M. × giganteus* harvested in June.

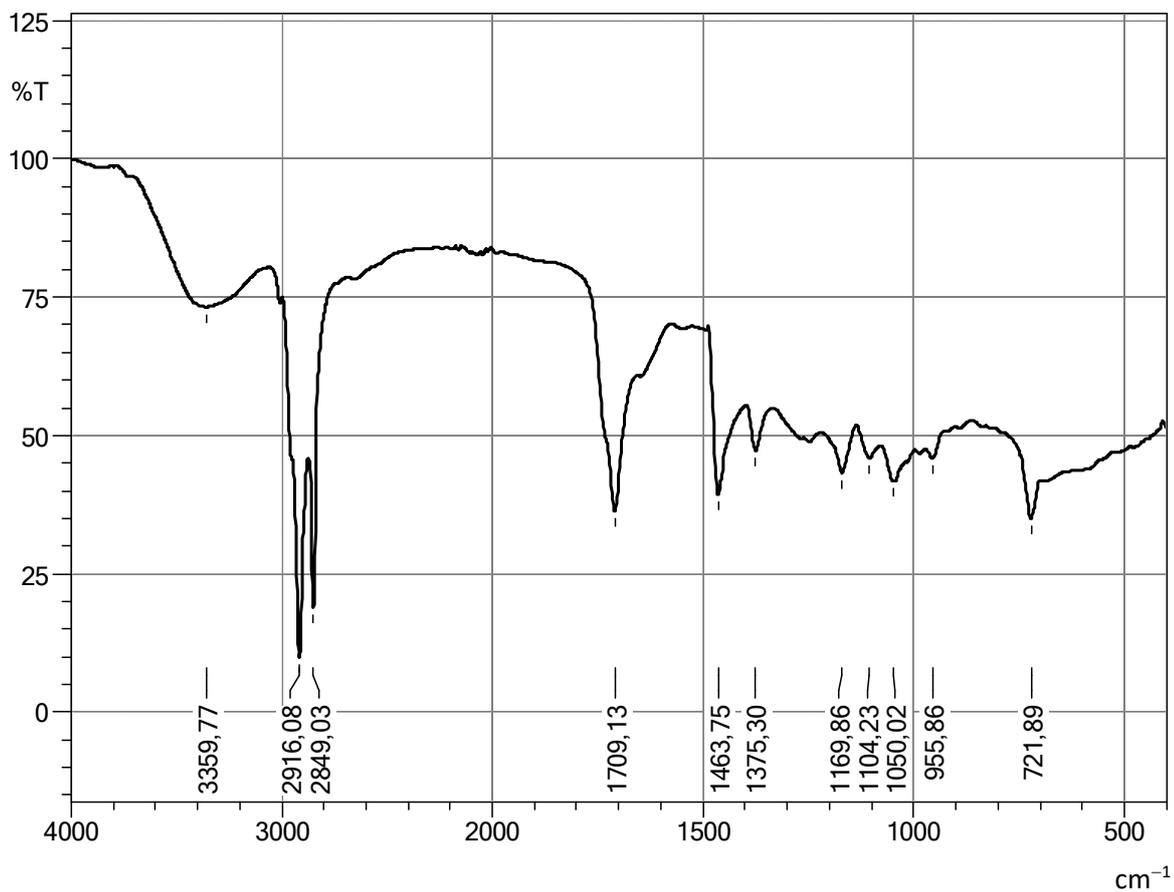

Figure S9. QATR-FTIR spectrum of the scCO₂ extract from *M. sinensis* harvested in June.

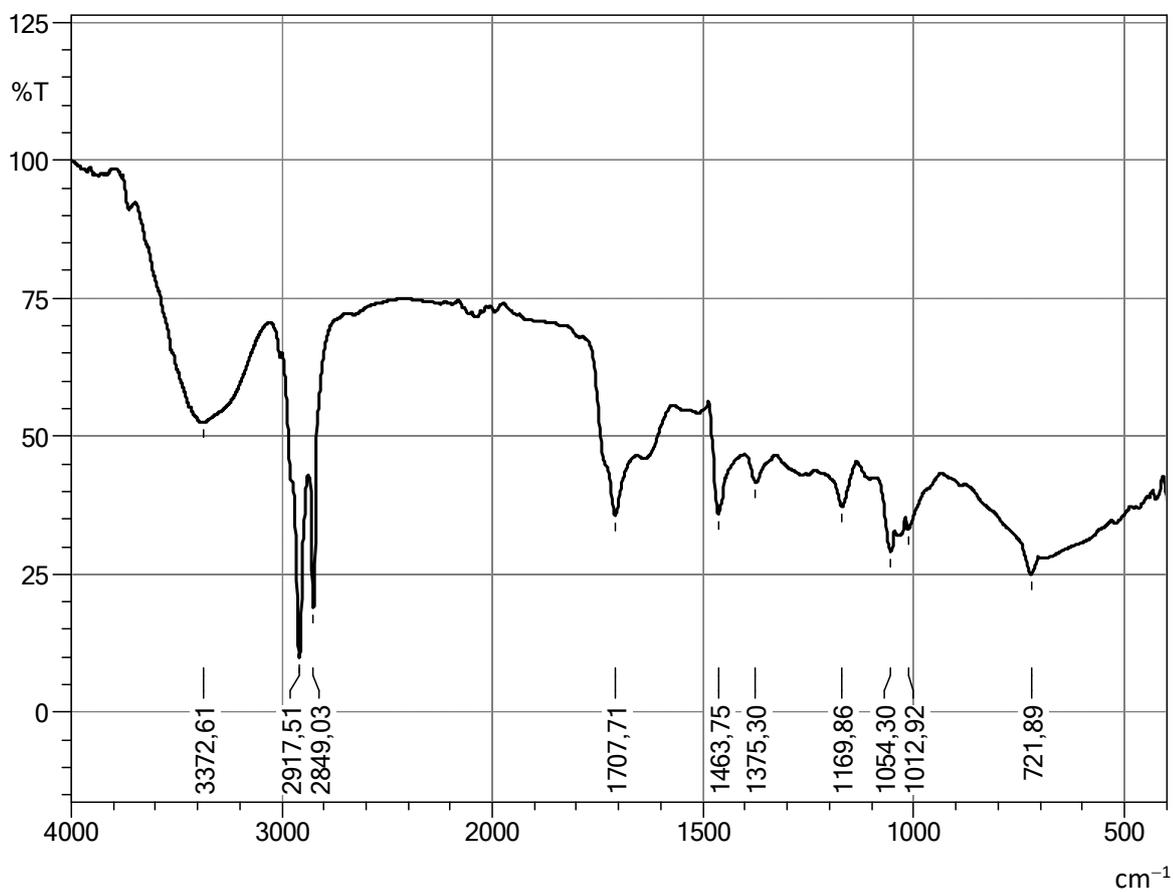

Figure S10. QATR-FTIR spectrum of the scCO₂/H₂O extract from *M. sinensis* harvested in June.

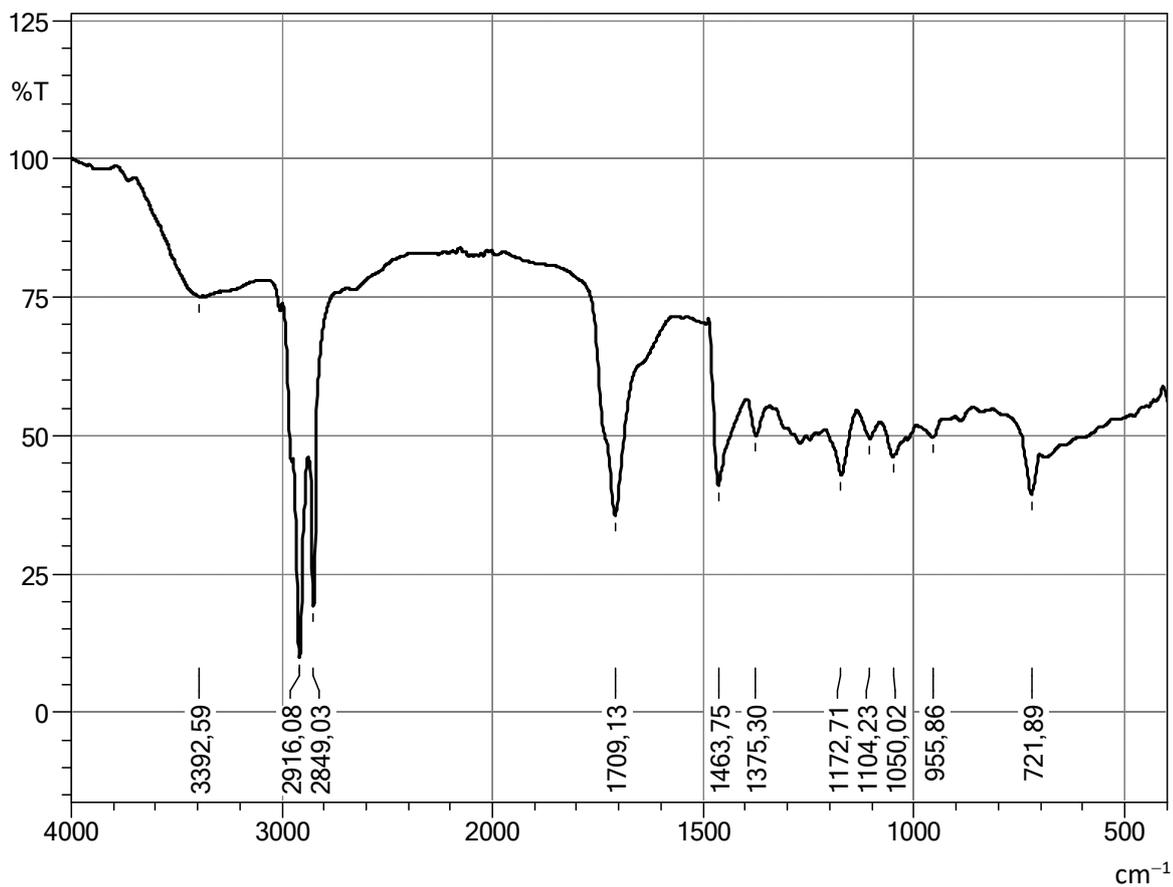

Figure S11. QATR- FTIR spectrum of the scCO₂ extract from *M. sacchariflorus* harvested in June.

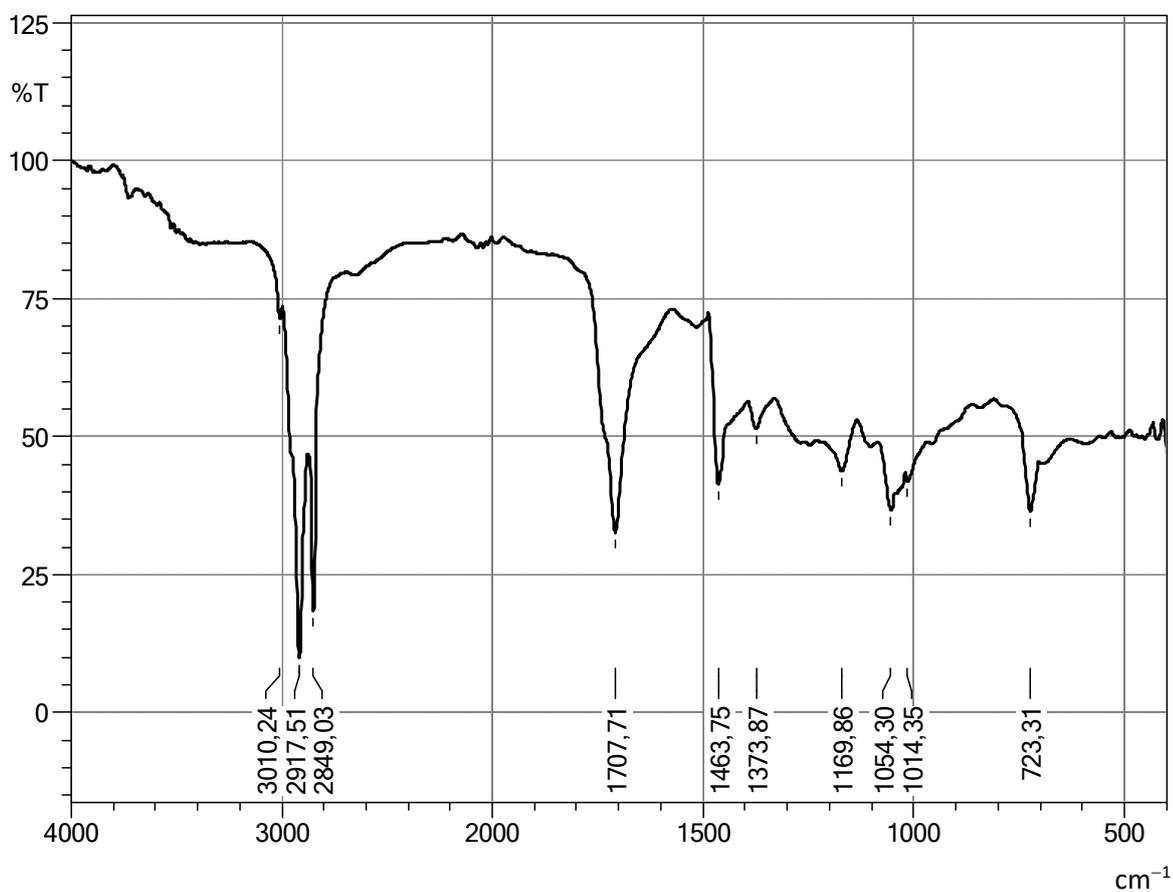

Figure S12. QATR-FTIR spectrum of the scCO₂/H₂O extract from *M. sacchariflorus* harvested in June.

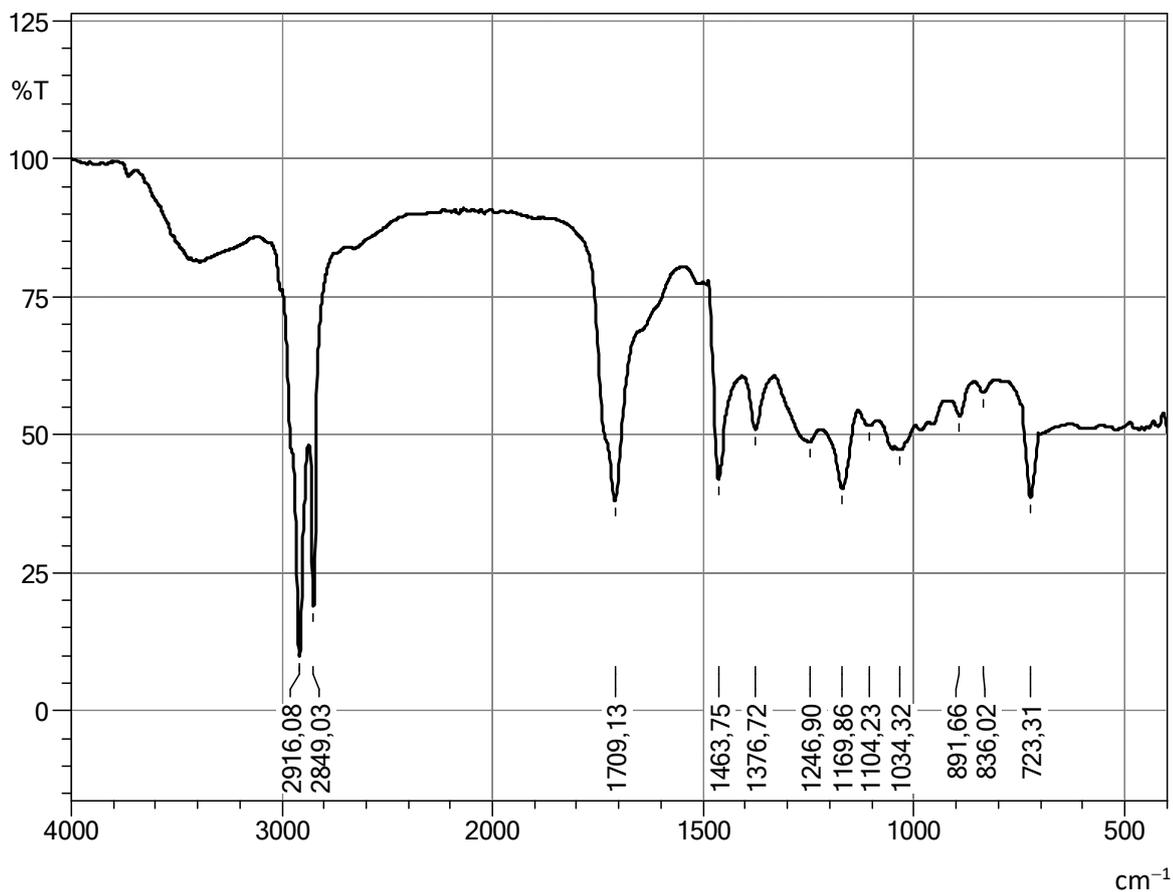

Figure S13. QATR-FTIR spectrum of the scCO_2 extract from *S. pectinata* harvested in June.

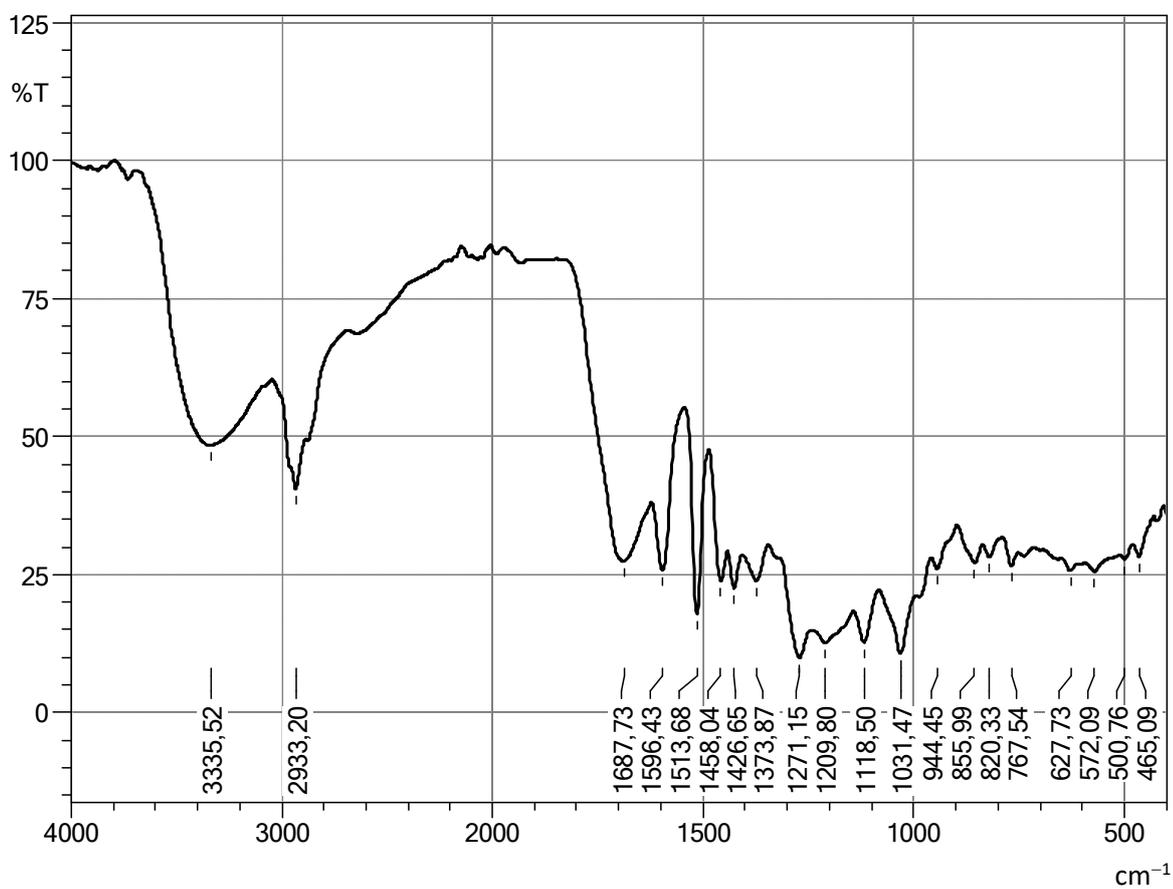

Figure S14. QATR-FTIR spectrum of the $\text{scCO}_2/\text{H}_2\text{O}$ extract from *S. pectinata* harvested in June.
