

Figure S2. Phenotypic distribution of nine fiber quality traits in the ILs across three environments. (A-C) are the phenotype distributions in the E1 (Manasi in 2018), E2 (Korla in 2018) and E3 (Manasi in 2019) environments, respectively. FL: Fiber length; FS: Fiber strength; MCF: Maturity of cotton fiber; MIC: Micronaire value; SFC: Short fiber content; FU: Fiber uniformity; FE: Fiber elongation; SCI: Spinning consistency index; TWC: The water content.
