

Table S4. Analysis of the incidence and severity (percentage of damaged leaf area and number of sporulated pustules) of rust infection at 236 days after inoculation (dai).

	p	Garnica		Garnica/Oro Azteca		Oro Azteca		Oro Azteca/Garnica	
		μ	S.E.	μ	S.E.	μ	S.E.	μ	S.E.
Incidence Index	< 0.0001	29.40a	3.48	13.19b	2.72	5.73c	1.55	11.32b	3.01
*Damage area leaf (%)	< 0.0001	4.85a	0.47	3.52b	0.69	1.73c	0.53	3.99b	1.33
Number of pustule with sporulation	< 0.0001	4.76a	0.41	3.35b	0.68	1.21c	0.92	2.46bc	0.77

*To perform the analysis of variance, the percentage values were transformed with the arcsine function; letters indicate significant differences in multiple comparisons means ($\alpha = 0.05$); modified from Couttolenc-Brenis et al. [87].
