

Figure S2. Histograms of colonization parameters in roots of *F. rubra* for each experimental variant: a-e) arbuscules abundance (%); f-j) vesicles abundance (%); k-o) colonization degree; p-t) non-mycorrhizal areas (%). Treatments V1-V5: V1 (control variant) – untreated; V2 – organic (manure) treatment – 10 t ha⁻¹ manure; V3 – low-mineral organic treatment – 10 t ha⁻¹ manure + 50 N 25 P₂O₅ 25 K₂O; V4 – mineral treatment – 100 N 50 P₂O₅ 50 K₂O; V5 – high-mineral organic treatment – 10 t ha⁻¹ manure + 100 N 50 P₂O₅ 50 K₂O.
