Means of different uppercase letters (rows) indicate a significant difference at ( $p < 0.05$ ) according to the LSD test of soil  $\text{NH}_4^+ \text{-N}$  among three horizontal distances (0.07, 0.14, and 0.20 m), while lowercase (columns) indicates a significant difference in soil  $\text{NH}_4^+ \text{-N}$  in four sampling times within each irrigation event (1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, and 4<sup>th</sup>) within each irrigation event. SDI<sub>10</sub>+N<sub>300</sub> and SDI<sub>10</sub>+N<sub>240</sub> are not significantly different.

**Table S6** Soil average  $\pm$  standard deviation of  $\text{NH}_4^+$ -N  $\text{mg kg}^{-1}$  under SD1<sub>15</sub> treatments.
