

Figure S1. The condition at harvest (screening tests for selection of *Bradyrhizobium* inoculant by 30 days pot experiment).

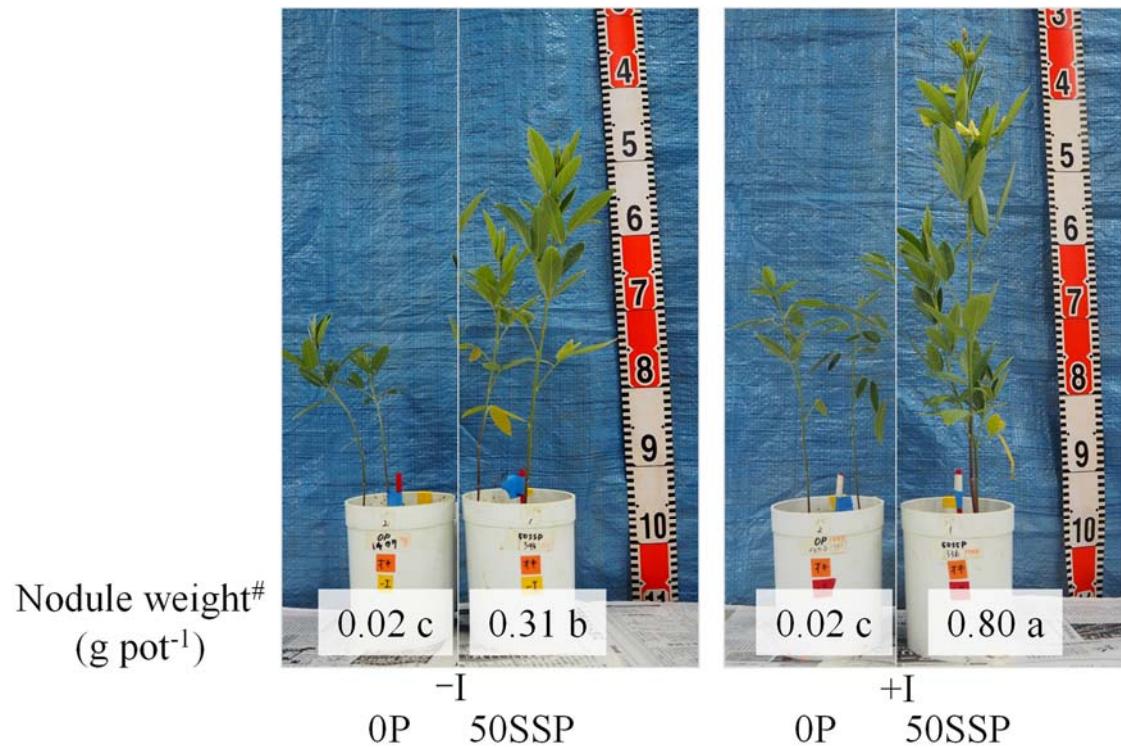

Figure S2. Plant condition at harvest and the total weight of *rhizobium* root nodules.

-I/+I and 0P/50SSP indicate *Rhizobium* inoculation and P fertilization.

#; The values in the photo indicate the total weight of *rhizobium* root nodules in each pot (g pot⁻¹; the fresh weight). Lowercase letters indicate significant differences in the total weight of *rhizobium* root nodules between the treatments, according to Tukey's posthoc test ($p < 0.05$).

Table S1. Plant P and N concentration after pot experiment.

		P concentration			N concentration		
		(mg P g ⁻¹)			(mg N g ⁻¹)		
		Leaf	Stem	Root	Leaf	Stem	Root

-I/+I indicate with or without *Rhizobium* inoculation and 0P/50SSP represent no P fertilization, respectively. Values in parentheses indicate the standard errors of the mean. Lowercase letters indicate the significant difference between the treatments, according to Tukey's posthoc test ($p < 0.05$). * indicates the significant difference between the -I and +I treatments under each P treatment, according to Student's t-test ($p < 0.05$).

Ctrl, -I/+I, and 0P/50SSP indicate Control (No plant), *Rhizobium* inoculation, and P fertilization.

Values in parentheses indicate the standard errors of the mean. * indicates the significant difference between the bulk soil and the rhizosphere soil in each treatment according to Student's t-test ($p < 0.05$).

Table S3. The amount of organic acid per root.

I _{noc} × P _{fer}		NS	NS	NS	NS	NS	NS
		0.2	0.1	0.4	3.3	0.0	0.0

-I/+I and 0P/50SSP indicate *Rhizobium* inoculation and P fertilization. Values in parentheses indicate the standard errors of the mean. NS in the lower half tables indicates not significant by two-way ANOVA; I_{noc} and P_{fer} indicate the effect of *Rhizobium* inoculation and P fertilization, respectively. Values in the lower half table indicate F-value.

Table S4. The amount of organic acid per pot.

I _{noc} × P _{fer}		**	**	***	***	***	***
		17	15	28	29	18	26

-I/+I and 0P/50SSP indicate *Rhizobium* inoculation and P fertilization. Values in parentheses indicate the standard errors of the mean. * in the upper half tables indicates the significant difference between the -I and +I treatments according to Student's t-test ($p < 0.05$). ** and *** in the lower half tables indicate $p < 0.01$, and $p < 0.001$, respectively, using two-way ANOVA; I_{noc} and P_{fer} indicate the effect of *Rhizobium* inoculation and P fertilization, respectively. Values in the lower half table indicate F value.

Table S5. pH after pot experiment.
