FY = fresh yield; DY = dry yield; Height = seedling height; FW = seedling fresh weight; %DM = dry matter percentage; Chl *a* = chlorophyll *a*; Chl *b* = chlorophyll *b*; Chl *a+b* = total chlorophyll; Car = carotenoids; AscA = ascorbic acid; TPC = total phenol compound. Statistical significance at 0.001 (**), 0.01 level (**), 0.05 level (*), or not significant (ns) bilateral, using Pearson correlation test in SigmaPlot. Signalling (-) reveals the negative relation between parameters or in its absence, their positive correlation.
