

## Agronomy Supporting Information

Article title: Endophytic biostimulants for smart agriculture: *Burkholderia seminalis* 869T2 benefits heading leafy vegetables in-field management in Taiwan

Authors: Shih-Hsun Walter Hung, Tsai-Ching Huang, Yu-Chih Lai, I-Chen Wu, Chia-Ho Liu, Yuh-Feng Huarng, Hau-Hsuan Hwang, En-Pei Isabel Chiang, Chih-Horng Kuo and Chieh-Chen Huang

The following Supporting Information is available for this article:

**Figure S1.** Endophytic biostimulants-treated lettuce phenotypes in the field.

**Table S1.** The primer pairs used for artificial symbiosis availability checks in this work.

**Table S2.** Different testing conditions for the best fermentation medium (BFM) evaluation.

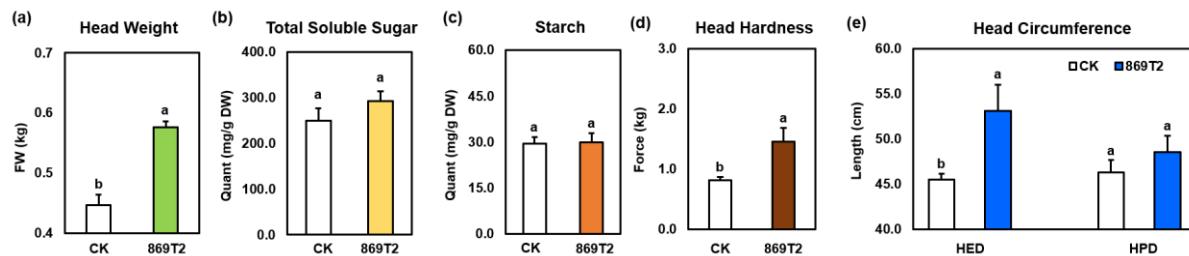

**Table S3.** Testing combinations for the best fermentation medium (BFM).

**Table S4.** Nutrient element analysis of in-field lettuce treated with a semilarge volume of fermenting endophytic biostimulants.

**Table S5.** Nutrient element analysis of in-field lettuce treated with a large volume of fermenting endophytic biostimulants.

**Figure S1.** Endophytic biostimulants-treated lettuce phenotypes in the field.

Phenotypes of harvested heads: (a) fresh weight (FW), (b) total soluble sugar (TSS) and (c) starch contents per sample dry weight (DW), (d) hardness, and (e) circumference length (HPD, polar diameter; HED, equatorial diameter); lengths are shown as the mean  $\pm$  SEM. n=3-4. Different letters indicate statistically significant differences, p<0.05.

**Table S1.** The primer pairs used for artificial symbiosis availability checks in this work.

| Gene product                      | Primer pairs | Sequence (5' to 3')      | Reference                  |
|-----------------------------------|--------------|--------------------------|----------------------------|
| 16S rRNA                          | E8F          | AGAGTTGATCATGGCTCAG      | Baker <i>et al.</i> , 2003 |

**Nutrient recipes**

| PYGn                                   | Content | Unit | MRSn                                   | Content | Unit |
|--|---------|------|--|---------|------|
| NaHCO <sub>3</sub>                     | 0.4     | g/L  | Tween 80                               | 1       | g/L  |
| NaCl                                   | 0.08    | g/L  | Ammonium citrate                       | 2       | g/L  |
| KH <sub>2</sub> PO <sub>4</sub>        | 0.04    | g/L  | CH <sub>3</sub> COONa                  | 5       | g/L  |
| K <sub>2</sub> HPO <sub>4</sub>        | 0.04    | g/L  | K <sub>2</sub> HPO <sub>4</sub>        | 2       | g/L  |
| MgSO <sub>4</sub> ·7(H <sub>2</sub> O) | 0.0192  | g/L  | MgSO <sub>4</sub> ·7(H <sub>2</sub> O) | 0.1     | g/L  |
| CaCl <sub>2</sub>                      | 0.008   | g/L  | MnSO <sub>4</sub> ·H <sub>2</sub> O    | 0.05    | g/L  |
| FeSO <sub>4</sub> ·7(H <sub>2</sub> O) | 1.1     | mg/L |  |         |      |

**Carbon and nitrogen sources**

| Carbon      | Content | Unit | Nitrogen        | Content | Unit |
|-------------|---------|------|-----------------|---------|------|
| Molasses M1 | 40      | g/L  | Fish protein F1 | 20      | g/L  |
| Molasses M2 | 60      | g/L  | Fish protein F2 | 40      | g/L  |

**Gas conditions**

| Aerobic         | Ratio       | Anaerobic       | Ratio |
|-----------------|-------------|-----------------|-------|
| O <sub>2</sub>  | same to air | O <sub>2</sub>  | 0%    |
| CO <sub>2</sub> | same to air | CO <sub>2</sub> | 100%  |

**Table S3.** Testing combinations for the best fermentation medium (BFM).

| Conditions                             | + Nutrient | C & N | Gas       | - Nutrient | C & N | Gas       |
|--|------------|-------|-----------|------------|-------|-----------|
| Number of Combinations                 | PYGn       | M1    | Aerobic   | --         | M1    | Aerobic   |
|  | MRSn       | M2    | Anaerobic | --         | M2    | Anaerobic |
|  |            | F1    |           |            | F1    |           |
|  |            | F2    |           |            | F2    |           |
| 2                                      | 4          | 2     | --        | 4          | 2     |           |
| <b>16</b>                              |            |       |           | <b>8</b>   |       |           |
| <b>Total testing combinations = 24</b> |            |       |           |            |       |           |

**Table S4.** Nutrient element analysis of in-field lettuce treated with a semilarge volume of fermenting endophytic biostimulants.

| <b>Targeted Nutrient Elements</b>   | <b>Detected Content (%)</b> |               |
|---|-----------------------------|---------------|
|   | <b>CK</b>                   | <b>869T2</b>  |
| Total Nitrogen (N)  | 2.5±0.05                    | 2.37±0.28     |
| Total Phosphorus (P)  | 0.589±0.009                 | 0.549±0.041   |
| Total Potassium (K)   | 4.39±0.21                   | 4.62±0.12     |
| Total Calcium (Ca)  | 0.361±0.016                 | 0.385±0.003   |
| Total Magnesium (Mg)  | 0.157±0.005                 | 0.151±0.007   |
| Total Iron (Fe)   | 0.0054±0.0011               | 0.0047±0.0032 |
| Each data point is based on two biological replicates and is shown as the mean±SEM. |                             |               |

**Table S5.** Nutrient element analysis of in-field lettuce treated with a large volume of fermenting endophytic biostimulants.

| Targeted Nutrient Elements                      | Detected Content (%) |       |       |       |
|---|----------------------|-------|-------|-------|
|   | CK                   | 250X  | 500X  | 1000X |
| Total Nitrogen (N)                              | 2.6                  | 2.3   | 2.4   | 2.1   |
