

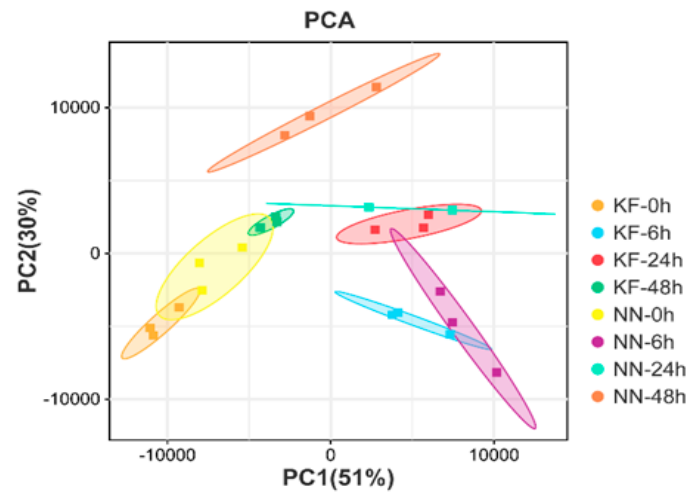

Figure S1. Principal component analysis (PCA) plot, where the same color represents the three biological replicates of each treatment group.

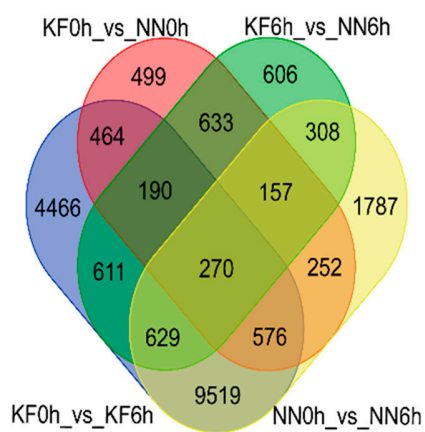

Figure S2. Venn diagram of Differentially expressed genes (DEGs) in resistant and susceptible cultivars at 6 h post-inoculation (hpi), across four comparison groups, including shared DEGs.

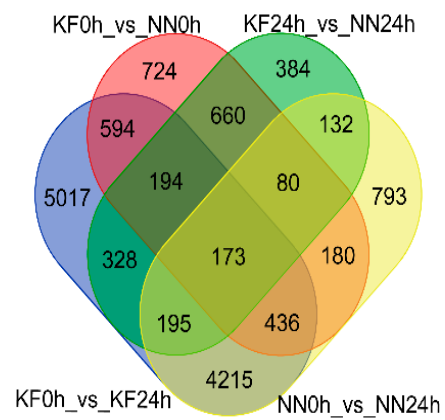

Figure S3. Venn diagram of Differentially expressed genes (DEGs) in resistant and susceptible cultivars at 24 h post-inoculation (hpi), across four comparison groups, including shared DEGs.

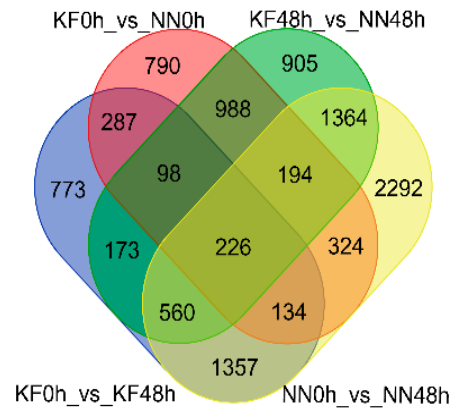

Figure S4. Venn diagram of Differentially expressed genes (DEGs) in resistant and susceptible cultivars at 48 h post-inoculation (hpi), across four comparison groups, including shared DEGs.
