Supplementary Figure S2. Construction and detection of the overexpression vector of *VpCML41* in *V. pseudoreticulata*

Construction and detection of the overexpression vector of *VpCML41* in *V. pseudoreticulata*

A: Lane 1 is *VpCML41* PCR amplification; B: Lanes 1-5 are *VpCML41* PCR amplification to detect *E.coil positive clones;* C: PCR amplification after adding *Xba I* and *Kpn I* restriction sites;

D: Verification of *Xba I* and *Kpn I* enzyme digestion for pCAMBIA2300-GFP-VpCML41, lanes1-6 show successful plasmid digestion; M: DL2000 marker
