Table S1. Effect of GOD on AFI of broilers under NE challenge in day 0-8 (DM basis).

Treatment [1]	**UC**	**NE challenged** [2]						
		CC	**ANT**	**GOD100**	**GOD200**	**GOD300**	**SEM** [3]	***p*-Value**
				d 0-8				
AFI (g)	183	173	178	184	182	184	2.48	0.076

AFI-average feed intake; [1] UC-unchallenged control, no additives; CC-challenged control, no additives; ANT-Antibiotics (salinomycin + bacitracin, 500 g/t, each in all phases); GOD100, 200 and 300, glucose oxidase @100, 200 and 300 g/t in all phases. [2] NE challenged: challenged birds were gavaged with *Eimeria* spp. on day 9 and *C. perfringens* on day 14. [3] SEM: standard error of means. Values within a row with different letters differ significantly ($p < 0.05$).
