ST: sequence type; AST: antimicrobial susceptibility test; AGly: aminoglycoside; R: resistance; Flq: Fluoroquinolone; MLS: Macrolide; Phe: Chloramphenicol; Sul: sulphonamide; Tet: tetracycline; Tmt: trimethoprim; Bla: β-lactamase; ESBL: extended-spectrum β lactamase; Carb: carbapanemase; OmpK: outer-membrane porin substitutions contributing to carbapenem resistance; MDR: multidrug resistance; CR: carbapenem resistant; S: Susceptible to all tested antibiotics.

OmpK35 and ompK36 sequences were analysed using Geneious Prime. OmpK35 Accession no KX528047.1 was used as a reference for OmpK35 sequence analysis. Reference laboratory strain ATCC43816 (Accession no CP009208.1), and amino acid sequences 6CRCP and 6CRD3 on Protein Data Bank (PDB) [10.2210/pdb6rcp/pdb](https://doi.org/10.2210/pdb6rcp/pdb) [15] were used as references for OmpK36 sequence analysis.
